PREFACE

The International Conference on Language, Linguistics, Literature, and Education (ICLLLE) 2024, hosted by Universitas Teknokrat Indonesia, aimed to foster scholarly exchange and contribute meaningful research to the academic community. This effort culminated in the production of the conference proceedings, titled “Transformative Trends: Navigating Language, Linguistics, Literature, and Education in the Smart Society 5.0 Era.”

This comprehensive volume brings together 25 selected papers that explore a wide array of themes within the fields of language, linguistics, literature, and education. The contributions featured in this collection highlight innovative findings, contemporary challenges, emerging opportunities, and practical solutions pertinent to these dynamic disciplines in the context of a rapidly evolving digital and smart society.

The editorial team extends its sincere gratitude to the organizing committee of ICLLLE 2024 and the Rector of Universitas Teknokrat Indonesia for their unwavering support and commitment, which were instrumental in the successful realization of this publication.

These proceedings will serve as a valuable resource for academics, researchers, and practitioners alike, inspiring further research, collaboration, and the dissemination of knowledge within and across the fields represented in this volume.

TABLE OF CONTENTS

Preface	vi
Table of Contents	vii
Schematics, Structure, and Metadiscourse Analysis of English with Lucy Educational Video	
<i>Nidyanti Ruwaina, Dea Irenia, Mawar Fadillah.....</i>	1
The Naming Patterns of Culinary Business Places in Depok City: An Anthropological Linguistic Study	
<i>Eri Ester Khairas, Dhea Tisane Ardhan, Ratna Khoirunnisa,</i>	11
The Translation Shift of Unggah-Ungguh Basa Jawa from Cerita Rakyat JAWA Tengah's Book	
<i>Ratih Asti Supriyanto, M.R. Nababan, Riyadi Santosa, Djatmika</i>	16
The Significance of Expressive Approach of Themes, Symbolisms, And Imageries in Fatimah Asghar's <i>I Don't Know What Will Kill Us First: The Race War Or What We've Done To The Earth</i>	
<i>RMachfianita Mirza Ayu Rosyadi, Fransisca Irnidianis, Magdalena Suyaji, Agischa Putri Agil, Bintang Ryan Ananta, Dimas Eko Saputro, , Rommel Utungga Pasopati</i>	28
The Representation of Papua Conflict in International News Media: Textual Analysis using A Fairclough's CDA Framework	
<i>Rania Purisela Sutawan, Kayla Suci Ramadhani, Ni Nengah Wulan Anggita Dewi.....</i>	39

Schematics Structure and Metadiscourse Analysis of English with Rebecca <i>Fatma Septiari, Resi Vinka Aprilia Mezana.....</i>	55
Representation of Mental Illness Stigma Portrayed by Sam Cohen in Ted Talk <i>Handera Diah, Nazaha Wafaqrana Azumar, Indah Rahayu</i>	63
Interactive Metadiscourse Markers in Malaysian University Student's Three Minutes Thesis Presentation (3MT) <i>Devi Ratnawati, Heri Kuswoyo.....</i>	75
Gender Roles in Pop Song Lyrics: A Sociolinguistic Analysis of Stereotypes and Language Change <i>Silvia Damayanti Puspaningrum.....</i>	84
The Noteworthiness of Indifference in Joyce Carol Oates' <i>Where are You?</i> <i>Raffi Achmad Zaky, Riska Dewi Ramadhani, Farhan Nazib Hamdani, , Alvina Sashabilla Linjani Putri, Dimas Eko Saputro, Rommel Utungga Pasopati.....</i>	93
Cultural Adaptation of International Exchange Students: Case Study of IISMA 2023 in Middle East Technical University of Turkiye <i>Shavina Lestiani, Suprayogi Suprayogi.....</i>	103
The Remarkable Phenomenology of Perception in Deb Olin Unferth's <i>Likable</i> <i>Dzil Fikris Shamad, Johanes Claudio Perdana Napitupulu, Galuh Fadhelah Aulia Hamidah, Yovita Olivia, Dimas Eko Saputro, Rommel Utungga Pasopati.....</i>	124
Professional Development Needs of English Teachers in Teaching Vocabulary in Lubuklinggau <i>Ayu Oktaviani, Agus Triyogo, Hamdan.....</i>	135
Trump and Project 2025: Critical Discourse Analysis of International News Coverage of the Conservative Blueprint <i>Nabila Safina Azzahra, Nur Arif Rojai, Widiyah.....</i>	144

Schematic Structure and Metadiscourse Analysis of Mike Teacher's Educational Video	155
<i>Fara Diva Tabitha, Salsa Aulia Rahma, Festyananta Tharapa Aini.....</i>	
Ideal Teenager in Kirstine Finne Thomsen's Ted Talk: Van Dijk's Critical Discourse Analysis	164
<i>Muhammad Zahii Athallah, Shena Zuliyusnan, Novendra Dewanto.....</i>	
The Influence of Plyometric Training on 25 M Breaststroke Swimming Speed in Athletes of Age Group (Ag) III and VI at Babeh Swimming School	179
<i>Mita Asrilia Khodijah, Arifai.....</i>	
The Effect of Ladder Drill Training on Increasing the Agility of Futsal Extracurricular Students of SMK Yadika Bandar Lampung	188
<i>Aliya Rahmawati, Reza Adhi Nugroho.....</i>	
The Influence of Ball Feeling Training on The Dribbling Skill of Futsal Extracurricular High School 1 Trimurjo	194
<i>Evy Yulianti, Imam Mahfudi.....</i>	
The Influence of Cardboard Jumping Training on the Results of the Ability to Lay Up Basketball Extracurricular Students SMAN 1 Sukoharjo	201
<i>Maytri Cahyaningrum, Reza Adhi Nugroho.....</i>	
The Effect of Triangle Passing Training on The Passing Accuracy of Men's Futsal Extracurricular SMK N 1 Bandar Lampung	206
<i>Nadisa Alifia Syahputri, Imam Mahfud.....</i>	
The Effect of Target Variation Passing Training on the Results of Passing Accuracy in Junior High School Football	212
<i>Rachmi Marsheilla Aguss, Pasha Alhidayah, Tri Wahyuni, Rianty Heryana, M. Adevghan Pratama, Royhan Pradipta Ananta.....</i>	
Analyzing Students' Strategies in Translating Narrative Text	218
<i>Teguh Satria Amin, Winda Setia Sari, Masitowarni Siregar, I Wayan Dirgayasa Tangkas.....</i>	
The Influence of Plyometric Training on Smash Results in Extracurricular Volleyball at MAN 1 Simpang Pematang	226

Abstract

This study aims to analyze the schematic structure and metadiscourse features present in the educational content of the "English with Lucy" YouTube channel, with a focus on the video "Learn about Confusing English Grammar: When to Use “the” in English (and When Not to)." The study explores how schematic organization and linguistic markers guide and engage learners through digital instructional materials. Utilizing a qualitative case study approach, the research examines how the speaker structures the lesson into predictable sections opening, explanation of concepts, practice, and closing while employing metadiscourse elements to foster learner engagement. The findings highlight the effectiveness of schematic structuring and metadiscourse in enhancing learner comprehension and engagement, offering insights into the broader role of digital media in modern language education.

Keyword: Educational videos, English with Lucy, Metadiscourse Feature Analysis, Schematic structure.

Introduction

In recent studies, the field of educational content analysis has expanded to include various forms of digital media, with a particular focus on how these materials facilitate learning. This shift has been driven by the increasing prevalence of online education platforms and the need to understand their impact on learner outcomes. Notably, research has explored schematic structure and metadiscourse feature analysis in academic texts and educational materials to enhance teaching methods and learning experiences.

For instance, Malmir and Khany (2019) investigated the linguistic features of research article highlights, revealing how authors use metadiscursive devices and promotional elements to underscore their research contributions. Similarly, Tuzlukova (2015) examined the structural and lexical characteristics of academic texts in the context of Oman, highlighting the interplay between global and local linguistic features. Courtney and Mann (2020) further extended the discussion by analyzing how educational practices are influenced by various discourses, such as neoliberalism and welfarism, especially in the post-pandemic era.

Schematic structure, according to Swales (1990) and Martin (1992), refers to the predictable stages or “moves” that systematically organize information in a text. These stages are vital in maintaining the coherence and flow of educational materials, ensuring that learners can follow the content logically. Research by Flowerdew and Wan (2006) also supports this view, highlighting that schematic structures help learners better understand complex information by breaking it down into organized sequences. This structured approach is crucial in educational videos, where the content must be presented clearly to facilitate learning.

Metadiscourse, as defined by Hyland (2005), focuses on the linguistic devices that writers or speakers use to engage with their audience, guiding them through the content while managing the flow of communication. Crismore et al. (1993) further emphasize that metadiscourse helps enhance audience comprehension by providing cues that signal the organization of ideas, clarify the author’s stance, or create a dialogue between the presenter and the audience. These metadiscursive elements are particularly important in educational videos, where maintaining the learner's attention and fostering interaction is key to successful instruction.

English with Lucy is a YouTube channel designed for individuals who wish to learn English in an accessible way. Created in January 2016, the channel has garnered over 11.4 million subscribers and amassed over 520 million views. On February 24, 2023, Lucy published a video titled "Learn about Confusing English Grammar: There is or There are," providing an insightful exploration of grammatical concepts. The videos on this channel not only explain linguistic concepts but also offer a comprehensive English course, available for free through the links in the channel's bio. These supplementary materials, such as downloadable notes, enhance the learning experience by reinforcing the lessons discussed in each video.

Despite these contributions, there remains a notable gap in the analysis of how schematic structures and metadiscourse features are specifically utilized in digital educational videos. This study addresses this gap by focusing on the "English with Lucy" series, aiming to understand how these elements are integrated into video content to enhance the effectiveness of language instruction.

Theory and Method

Schematic structure theory plays a central role in this study, focusing on how information is systematically organized to enhance communication and comprehension of educational content. According to Swales (1990) and Martin (1992), schematic structures involve predictable, staged sequences that guide learners through a logical flow of ideas. This is essential for maintaining coherence in instructional materials, particularly in video-based learning where content must be structured in a way that facilitates understanding. Flowerdew and Wan (2006) further highlight that breaking down complex information into schematic stages allows learners to process the material more effectively.

Metadiscourse, as first conceptualized by Harris (1959) and later expanded by Hyland (2005), refers to the linguistic strategies used by speakers or writers to engage and guide their audience through a text or presentation. Crismore et al. (1993) explain that metadiscourse markers help structure communication, clarify the speaker's stance, and create interaction with the audience. In the context of digital education, these elements are critical for fostering engagement and supporting comprehension, as they help learners navigate the content more easily by providing organizational cues and interactive components.

Qualitative research involves the collection and analysis of non-numerical data to understand concepts, opinions, or experiences. It focuses on exploring meanings, processes, and experiences in natural settings. According to Creswell (2013), qualitative

methods enable researchers to study phenomena in context, emphasizing interpretation and understanding over quantification.

This article uses a qualitative case study approach, analyzing educational content from the popular YouTube channel English with Lucy. Specifically, the video “When to Use 'THE' in English (and When Not to!)” serves as the primary source of data. The study focuses on the schematic structure and metadiscourse features used in the video to deliver the lesson effectively. The primary data in this study is the transcript of the selected video, including Lucy’s explanations, examples, and interactions with viewers. The video is analyzed to identify key instructional strategies, such as the presentation of grammatical rules, the use of examples, and interactive elements like quizzes and downloadable notes. This analysis aims to uncover how schematic structures and metadiscourse features are integrated into video-based instruction to enhance learner engagement and understanding, contributing to a broader understanding of digital media's role in language education.

Findings and Discussion

Schematic Structure

Schematic structure is a framework used to organize information clearly and logically. It breaks down content into distinct sections, each serving a specific purpose to guide the flow of communication or instruction. In many lessons or presentations, schematic structure helps ensure that the audience follows along easily by dividing the content into key components like introduction, explanation, practice, and conclusion. This approach not only clarifies the main points but also enhances learning and retention by providing a well-organized and systematic presentation of ideas.

Table 1. Schematic Structure

Structure	Explanation
Opening	The speaker greets the audience warmly and introduces the lesson, which will focus on the correct usage of the article "the" in English. The speaker mentions that 17 cases where "the" is used and 7 cases where it is not used will be discussed, and the lesson is suitable for all learners. A free PDF and quiz are also offered to help learners reinforce their understanding.

Explanation of Concepts	The speaker dives into the key concepts, starting with pronunciation tips and explanations of when to use the two different pronunciations of "the" (with a consonant or vowel sound). The main body of the lesson covers 17 scenarios where "the" is used, with examples for each, and 7 situations where "the" is not required. The speaker explains the differences between these situations and provides practical examples for clarity.
Practice and Application	After the detailed explanation, the speaker offers a quiz to allow learners to test their understanding and encourages them to download the free PDF. The speaker also directs learners to additional resources and exercises on the website.
Closing	The speaker concludes the lesson with a motivational message, wishing learners success in mastering the English language and encouraging them to connect via social media and explore additional English courses. The lesson is wrapped up with a friendly "See you soon" and an invitation to join upcoming lessons. This structure effectively introduces the learners to the usage of "the," provides in-depth explanations, and reinforces learning through examples and practice opportunities.

The lesson focuses on the correct usage of the word "the," breaking down its use in 17 key situations and when it should not be used in 7 cases. The lesson covers pronunciation, explaining when to say "the" (before consonant sounds) and "thee" (before vowel sounds), with exceptions for certain pauses in speech. The speaker emphasizes the importance of learning proper pronunciation early and provides a detailed explanation of "the" as a definite article used with specific or previously mentioned nouns, superlative adjectives, geographical names, and family names.

The lesson also outlines when not to use "the," including general plural nouns, names of people or holidays, and most country names. To support learning, the speaker offers a free PDF with lesson notes and practice exercises, accessible via a link in the video description, along with other English learning resources. The session concludes with a warm sign-off and a promise of future lessons.

Metadiscourse Features

Metadiscourse analysis looks at how language is utilized to structure and manage communication, helping the audience interpret the message and improving the overall clarity and impact of the discourse. It examines the linguistic elements that speakers and writers use to organize their ideas, highlight important points, and indicate connections

between concepts. This paper emphasizes grammatical cohesion and the use of discourse markers as key tools in shaping and guiding the flow of the message.

Grammatical Cohesion

Grammatical cohesion involves the use of various grammatical elements and structures to link sentences and ideas within a text, ensuring a logical and coherent flow. This includes employing conjunctions (such as "and," "but," and "because"), pronouns (like "he," "she," and "it") to refer to earlier concepts and other grammatical tools like tenses and modifiers. By skillfully using these components, a writer or speaker can build a clear and unified narrative or argument, making it easier for the reader or listener to track and comprehend the development of ideas.

Table 2. Conjunction

A conjunction is a word that connects clauses, sentences, or words to show relationships between ideas.

Word	Frequency	Sample
And	14	" And we use this one when the following word..."
When	6	" When Scarlet finishes her un- dergrad at Oxford, she will trans- fer to Stanford."
Or	5	" Or let's have a few pints at the Ship and Shovel."
So	4	" So , pay attention, and we'll also discuss all of the exceptions."
Because	3	" Because once you have bad pronunciation habits, they're re- ally hard to unlearn."
But	3	" But let's look at a few of the most common."
Total	35	

Conjunctions are essential for building sentences that are clear and coherent. For instance, "and" links ideas together, as in "And we use this one when the following word...", while "or" presents options, such as "Or let's have a few pints at the Ship and Shovel." "Because" provides reasons, as in "Because once you have bad pronunciation habits, they're really hard to unlearn." "When" introduces a time-based context, like "When Scarlet finishes her undergrad at Oxford, she will transfer to Stanford." "So" shows a result or consequence, such as "So, pay attention, and we'll also discuss all of the exceptions." Lastly, "but" introduces contrasts, as in "But let's look at a few of the

most common." These conjunctions work together to ensure a smooth and logical flow of ideas in a text.

The data provided highlights the usage and frequency of various conjunctions within a sample text, showcasing how these linguistic tools contribute to coherence and logical flow. The conjunction "and" appears 14 times, playing a vital role in connecting words, phrases, and clauses to ensure smooth transitions between ideas. For instance, in the sample sentence "And we use this one when the following word...", the conjunction links thoughts seamlessly."When" used 6 times, introduces time-related clauses, helping to establish relationships between actions or events. An example like "When Scarlet finishes her undergrad at Oxford, she will transfer to Stanford" indicates specific timing, guiding the reader through the sequence of events.

The conjunction "or" occurs 5 times, presenting alternatives and offering choices within the text, as seen in the sentence "Or let's have a few pints at the Ship and Shovel," which introduces different possibilities. "So," used 4 times, highlights cause-and-effect relationships, as in "So, pay attention, and we'll also discuss all of the exceptions," emphasizing consequences that logically follow from previous statements. "Because," mentioned 3 times, provides explanations or reasons, such as in "Because once you have bad pronunciation habits, they're really hard to unlearn," linking causes with their effects to clarify logical connections.

Lastly, "but" appearing 3 times, introduces contrasts or exceptions, as in "But let's look at a few of the most common," signalling a shift in focus or a counterpoint. These conjunctions work together to create grammatical cohesion throughout the text, ensuring that the ideas are connected logically and clearly. In total, 35 instances of conjunctions are used, reflecting their crucial role in maintaining the overall flow and coherence of the narrative.

Discourse Markers

Table 3. Discourse Markers

Discourse markers are words or phrases used to structure and organize communication, ensuring the smooth flow of ideas. They function to link thoughts, indicate relationships between different parts of a conversation or text, and assist the audience in following the progression of the content.

Type	Word	Frequency	Sample Sentence
Clarification	Okay	2	"Okay, now that we've got pronunciation sorted, let's do

Sequencing	Firstly	1	"Firstly, number one, we use the before superlative ad-jectives and adverbs."
	Then	2	"Then after that, you will automatically receive all of my free PDFs, my news, of-fers and updates."
Emphasizing	So	3	"So, this is why I've created the PDF for you."
	Now	2	"Now let's shift gears and learn about when you don't need to use the."
	Notice	2	"Notice that because only begins with a vowel sound, we say the, the only."
Total		12	

The table presents information on the use of grammatical discourse markers, which are words or phrases that organize and control the flow of discourse within a text. These markers aid in clarifying, ordering, and highlighting key ideas, thereby improving the effectiveness of communication. Below is a comprehensive explanation of the data:

Grammatical Discourse Markers Overview

The data provided highlights the use of various grammatical discourse markers that serve to clarify, sequence, and emphasize ideas, ensuring effective communication.

The word "Okay" is used 2 times as a clarification marker. It helps signal that a concept or point has been understood or completed, and the speaker is ready to move on to the next topic. For example, "Okay, now that we've got pronunciation sorted, let's do...", marks a shift in the conversation while ensuring the listener is following along.

In terms of sequencing, the word "Firstly" appears once, indicating the first item in a list or sequence. It helps to organize ideas, as in "Firstly, number one, we use 'the' before superlative adjectives and adverbs," making it clear that the speaker is outlining the steps or key points in order. Similarly, "Then" is used 2 times to indicate the next step in a sequence, as in "Then after that, you will automatically receive all of my free PDFs...", guiding the listener through a logical progression of events.

For emphasizing, "So" is used 3 times to highlight the result or consequence of a previous statement, as in "So, this is why I've created the PDF for you." It reinforces the reason or conclusion of a point. "Now" appears 2 times to signal a transition to a new focus, as in "Now let's shift gears and learn about when you don't need to use 'the',"

emphasizing the importance of the topic shift. The word "Notice" is also used 2 times to draw attention to a specific detail, as in "Notice that because 'only' begins with a vowel sound, we say 'the,' the only," helping to emphasize key observations.

Overall, these markers used a total of 12 times play critical roles in structuring and enhancing the flow of ideas in a way that clarifies, sequences and emphasizes important points in the discourse.

Conclusion

In conclusion, the schematic structure and metadiscourse analysis of "English with Lucy" reveals that the integration of schematic structure and metadiscourse features significantly enhances the instructional quality of digital educational content. By systematically organizing lessons into clear stages and employing metadiscursive markers like conjunctions and discourse markers, the speaker effectively guides learners through complex grammatical concepts. This structured approach not only clarifies linguistic principles but also fosters greater engagement and comprehension. The study underscores the importance of these features in the context of digital education, highlighting their potential to improve learning outcomes in language instruction. Further research could extend these findings to other forms of educational media, offering a broader perspective on their pedagogical impact.

Abstract

Names are an essential aspect of culture, emerging through interactions between people, language communities, and their environments. Consequently, naming can be viewed as a specialized linguistic activity deeply connected to cultural values and traditions. This phenomenon extends beyond personal and place names into the aspects of business and commercial naming. One example is the naming of culinary business places. This study focused on analyzing the naming pattern of culinary business places in Depok City, using theories from anthropological linguistics and onomastics. The study examined the names of 98 culinary business places located in Margonda Street, Depok City, West Java. The results show that the language variations used in the naming pattern consist of Indonesian, English, and mixed languages. Furthermore, some names are based on the business owners' names and derived from particular places' names. To sum up, these naming patterns represent the cultural identity of the Depok community and are also strategically used for commercial purposes, as they help create memorable trademarks that enhance consumers' interest.

Keywords: Anthropological Linguistics, Culinary Business, Naming Patterns

Introduction

Names can appear in various aspects of life and are shaped by the specific vocabulary of different languages. According to the Merriam-Webster dictionary, the term 'name' is defined in multiple ways: (1) as a word or phrase that uniquely identifies a person or thing, and (2) as a word or symbol used in logic to represent an entity. Ainiala, Saarelma, and Sjoblom (2016) also argue that names are an integral part of culture, emerging through interactions among individuals, language communities, and their environments. Additionally, Rosenhouse (2002) suggests that naming is a distinctive linguistic activity closely connected with values, traditions, aspirations, fears, and significant events in people's lives. Furthermore, the choice of names reflects the preferences of those who assign them, encompassing real-world objects, actions, characteristics, and beliefs (Al-Zumor, 2009).

The practice of naming extends beyond personal and place names to include business and commercial contexts. This is evident in the naming of culinary business places, where a variety of naming conventions are used. In Depok City, for example, culinary business places are named using diverse linguistic choices. Some names used are based on personal names while others use names of places.

Previous research within the field of onomastics, particularly in the Indonesian cultural context, has been conducted. One such study by Permataswari (2020), titled "Meeting Rooms Naming in East Java Governmental Building: A Study of Anthropological Linguistics," investigated the naming practices in public spaces and the meanings behind them. Permataswari's research revealed that the names of rooms in East Java governmental buildings were derived from historical figures such as former governors, kings, and military leaders from significant kingdoms in the region. The study highlighted that these naming practices were intended to honor these prominent figures and their legacies, while also preserving and transmitting cultural and historical values to future generations.

Therefore, this study proposes to examine the naming pattern of culinary business places in Depok. By analyzing these naming patterns and their references, the study aims to uncover their meanings and gain a cultural understanding of their significance. The research applied theories from anthropological linguistics and onomastics.

Theory and Method

Foley (2012) defines anthropological linguistics as a subfield of both linguistics and anthropology that examines language within its broader social and cultural contexts. This field explores how language contributes to and maintains cultural practices and social structures. Although related to sociolinguistics, anthropological linguistics differs

in its focus. It approaches language from an anthropological and cultural perspective, seeking to understand the meanings behind various forms, registers, and styles of language use. In contrast, sociolinguistics views language as a social institution and investigates patterns of linguistic behaviour within specific social groups, correlating these patterns with variables such as age, gender, class, and race (Foley, 2012).

Crystal (1999) describes onomastics as a branch of semantics focused on the study of the origins and meanings of proper names. Within onomastics, there are two main areas of research: anthroponomastics and toponomastics. Anthroponomastics deals with personal names, while toponomastics is concerned with place names. Additionally, anthroponomastics is grounded in the idea that there is a significant relationship between language and cultural practices. This means that it examines how language functions within cultural practices and how it serves as a tool for exploring and understanding the worldview of specific communities (Al-Zumor, 2009).

This study applied a qualitative method. The qualitative method was chosen because it allowed the researcher to discover and understand human communication, perspectives, and experiences that provided a deeper investigation towards the phenomenon being researched from the perspectives of the participants (Merriam, 2009).

The data obtained were the culinary business place names taken from their board, banner, or neon sign located in the front of the places. There were 98 culinary business places, including food and beverages restaurants and stalls, that were obtained as the visual data. Since the data were visual, thus the techniques of data collection used a good-quality camera to capture the data needed. Besides, the researchers also used record and note techniques to ensure that the validity of the naming patterns of the culinary business places can be guaranteed.

Furthermore, to discover the phenomena that cause the naming patterns using the names of particular persons and places, the interview was also conducted in this study. The interview was done with the samples of 10 (ten) culinary business place owners who named their business using either a person's name or a place name.

Findings and Discussion

According to the data obtained, it is shown that the names of culinary business places located in Margonda Street, Depok City, are built from 3 (three) different language variations. Those variations consist of the use of the Indonesian language, local language, and English. They are used either as independent monolingual names or mixed multilingual names as illustrated in Chart 1.

Chart 1. Language Variation as the Naming Patterns of Culinary Business Places

As illustrated in Chart 1, there are 3 (three) variations of language in the naming of culinary business places in Margonda Street, Depok City. There are Indonesian language, English, and mixed languages. It also has to be noted that the variation of mixed languages consists of several combinations, such as Indonesian and English languages, Indonesian and local languages, and English and local languages.

Mixed languages become the language variation that is mostly used as the names that label the culinary business places in Margonda Street, Depok City. Several examples of culinary business places that have names using Indonesian and English languages, such as *Ayam Keprabon Express*, *Waroeng Steak & Shake*, *Kopi Bar*, *I am Geprek Bensu*, *Perang Kerang Seafood*, *Membara Grill + Shabu*, and so on. Furthermore, several names of culinary business places use a combination of Indonesian and local languages, such as *Pempek 8:12 (Lapan Duobelas)*, *Sate Padang Jaso Bundo*, *Rumah Makan Padang Ajo Datuak*, *Kupi Bisnis*, *Sate Solo Jos Pak Purwanto*, and others. In addition, there is also an example of a culinary business place whose name uses a combination of English and local languages, which is *Sopo Nyono Japanese Food*.

The use of mixed language as the most frequent culinary business place names may represent the multiculturalism of life in Depok itself. This is supported by the 2023 Depok City Performance Report which shows that culturally, the communities of Depok have multicultural characteristics as they are ethnic such as Betawi, Sunda, Minang, Batak, Bugis, Ambon, Timor, and other ethnic groups reside in Depok City. Besides, the communities in Depok also have religious diversity consisting of Islam, Christianity, Catholicism, Hinduism, Buddhism, and Confucianism. Despite its multicultural character, the communities in Depok can live in harmony and peace (Bagian Organisasi Sekretariat Daerah Kota Depok, 2023). In addition, using mixed language can also be a

marketing strategy to reach out to wider and more varied customers who have different cultural backgrounds.

The Indonesian language has become the second most frequent language variation used as the names of culinary business places in Margonda Street, Depok City. Some instances of culinary business places named using the Indonesian language are *Ayam Penyet Surabaya*, *Warteg Selera Bahari*, *Belah Doeren*, *Kedai Roti Dingin*, *Rumah Lobster*, *Nasi Goreng Azkia Sumber Rejeki*, and many more.

Even though the use of the Indonesian language as a naming variation does not occupy the most frequent variation, however, its application may also imply that many culinary business owners still regard domestic perspectives as the Indonesian language is the first language used by most people. Also, looking at the types of food sold, it can be seen that culinary business places whose names are in Indonesian languages sell Indonesian or even traditional food. Therefore, it can be said that the purpose of naming the business places using the Indonesian language is to target local or domestic customers, as it becomes part of the business owners' marketing strategy.

In the naming of culinary business places in Margonda Street, Depok City, the English language became the least frequent language variation used. For example, the culinary business places whose names use the English language are *Fat Bubble*, *Hotway's*, *Fish Street*, and *OMG! Oh, My Grill, Walking Drums*, and so on.

Conclusion

In summary, the names of culinary business places analyzed in this study largely reflect the cultural identity of Depok City and also the owners' ideas and creativity. Naming practices—whether based on the language variations of Indonesian, English, or even mixed languages and also containing a particular person's or certain place's names—serve a commercial purpose. By creating distinctive trademarks, these names are designed to be memorable and easily recognized by consumers.

Abstract

This research focused on types of *unggah-ungguh basa Jawa* or Javanese speech levels used by the characters in the Cerita Rakyat Jawa Tengah's book along with the factors underlying the choice of speech levels and also analyze the relay translation of Javanese speech level in Cerita Rakyat Jawa Tengah's Book aimed to explore the translation shift. This research is a qualitative descriptive research with a focused single case study. These 278 data were collected by content analysis and focus group discussion (FGD). Data validity used data source and method triangulation, then the data analysis technique used Spradley's model. The findings revealed that all types of speech levels (*ngoko lugu*, *ngoko alus*, *krama lugu*, *krama alus*) were found in the stories in this book in various factors underlying the choice of speech level, there are age, rank, kinship, descent, and acquaintance. At the speech level of *ngoko* and *krama*, there is a tendency to shift both in the Indonesian translation and English translation due to the absence of speech level markers in the target language. Meanwhile, some data was found where there was no shift due to the existence of a certain lexicon in the target language which indicates the presence of speech level markers.

Keyword: *Javanese Speech Level, Relay Translation, Translation Shift, Cerita Rakyat Jawa Tengah's Book*

Introduction

In Indonesia, one of the regional languages that has a close relationship with community culture is Javanese. In sociological studies, language is always connected with society and its use in society's social environment. Javanese has rich variations, apart from dialect, one thing that stands out in Javanese is the speech level (*unggah-ungguh basa Jawa*). The level of speech in Javanese is more often known as *unggah-ungguh* or *undha-usuk*. It becomes interesting when the language that interprets a particular culture is changed into another language hoping that the result still contains the meaning and intent of the source language culture. The uniqueness of Javanese culture is a factor that will influence communication patterns between communities seen from the perspective of social status, economics, age, situational and other factors.

There are many Javanese texts which were finally translated, one of the Javanese texts which was translated into Indonesian and then into a foreign language (English) was the Central Javanese Folklore book published by the Central Java Province Language Center. This book contains folk tales, all of which represent the use of speech levels by Javanese culture, complete with translations. Moreover, the stories in this book represent various places in Central Java as a whole. There are 3 levels of speech in commonly used Javanese, namely *krama*, *madya*, and *ngoko*. However, in principle, the only levels of speech that can be clearly distinguished are *krama* and *ngoko* (Sasangka, 2019). In this Central Javanese Folklore book, the levels of *krama* and *ngoko* speech are available with various factors that underlie their use in Javanese society.

One of the main goals of translation is to convey the meaning contained in the source language. There are many methods used to create a translation that contains all the intentions and messages contained in the source language. One of them is using other languages to help the translation process. This is known as relayed translation or relay translation. Assis (2017) states that any translation that is mediated by another translation is called relay translation. Likewise, this research involves relayed translation from Javanese to English with Indonesian as mediation.

Research on Javanese speech levels has been studied extensively before but has not been linked to translation. As done by Rizky and Puspitorini (2019), Hadari and Hendrokumoro (2021), Azila and Febriani (2021). The Javanese speech level studies above use various approaches, by studying the use of Javanese in various places and situations. All the research above does not involve relay translation as a study, even though there is an opportunity to do this by looking at several data sources, such as films that contain two translations as subtitles, Indonesian and English.

Research that has raised relayed translation as a study has been carried out by other

researchers by explaining the benefits of relayed translation and its influence on communication between countries and even the spread of literature and religion in some cases. (Ortega, 2023; Pieta, 2019; Gurcaglar, 2013; Xin, 2021; Yu, 2017; Andre, 2010; Sujatmiko, 2022). Some of the research above explains the role of English as an intermediate language that is still used today. Relayed translation also plays a role in the spread of foreign literature in various countries, such as Western literature in Asian countries. Apart from that, the importance of relayed translation as a means of spreading Buddhism in China is also explained. Although several studies have involved cultural factors in the source language, they have not discussed the relationship between language and society in the source language, concerning this research is the speech level.

Literature Review

Javanese Speech Level

Harjawiyan (2001) conveys seven factors that determine the speaker's attitude in positioning himself correctly through choosing the level of *Ngoko* or *Krama* speech, there are (1) age, (2) kinship (*peprenahan*), (3) degree of rank (*derajat pangkat*), (4) degree of eminence (*derajat semat*), (5) blood (heredity), (6) personal qualities (*lehuring diri*), (7) introduction (*tetepangan*).

The division of levels of speech/uploads of the Javanese language currently used in the teaching and learning process in schools refers to the opinions of Sudaryanto (1989) and Ekowardana (1993) in (Sasangka, 2019: 16) which basically have the same things, namely: 1) *ngoko lugu*, 2) *ngoko alus*, 3) *krama lugu*, 4) *krama alus*. So in general, the level of Javanese speech is divided into 2 forms, namely *ngoko* variety and *krama* variety. If there are other varieties of speech levels, it is certain that these forms are only variants of *ngoko* and *krama* varieties. These two forms of speech level will be described as follows: 1. *Ngoko* Variety what is meant by *ngoko* variety is the uploaded form of the Javanese language which has the core of the *ngoko* lexico, or the core element in the *ngoko* variety is the *ngoko* lexicon and nothing else. The affixes that appear in this variety are all in the form of *ngoko* (for example the affixes-, -e and -ake). The *ngoko* variety can be used by those who are familiar and by those who feel that they have a higher social status than their interlocutor (speech partner). The *ngoko* variety has two variant forms, namely *ngoko lugu* and *ngoko alus*.

Variety of *Krama* what is meant by variety of *krama* is the form of the Javanese language which has as its core a lexicon of *krama*, or the core element in a variety of *krama* is the lexicon of *krama* and not another lexicon. The affixes that appear in this variety are all in the form of *krama* (for example the affixes *dipun*-, *-ipun*, and *-aken*). Various *krama* are used by those who are not familiar and by those who feel they are lower in social status than the person they are talking to. The variety of *krama* has two variant forms, namely *krama lugu* and *krama alus*.

Relayed translation

Relayed translation or relay translation according to Dollerup (2008) can be defined as mediation from the source language to the target language where the translation product has been realized in a language other than the original language. Chain translation (relayed translation) is a translation with special characteristics, namely having an audience in the first target language with the pattern of the source language (L1), first translation (L2), and chain translation (L3). When the first translation is selected as the source language for the next translation, the first translation becomes the relay for the next translation. Relayed translation emphasizes the product, namely the translated text (Dollerup, 2008). Ringmar (2012) states that relay translation refers to a chain of (at least) three texts, ending with a translation made from another translation; original (ST) to intermediate text (IT) then to target text (TT). Meanwhile, Assis (2017) states that any translation that is mediated by another translation is called relay translation. Relay translation is a translation that is mediated by other translations (Rosa, Pieta, & Maia, 2017).

Methods

The focus of this research is the types of speech levels in Javanese used by the characters in the Central Javanese Folklore along with the factors underlying the choice of speech levels by these characters. These types of speech levels are then studied in relayed translation. This research is product-oriented translation research because this research examines translation works and does not touch on the issue of the translation process carried out by the translator. This research is a qualitative descriptive research with a focused single case study. Stake (1995) said that case studies have unique characteristics and similarities at the same time. A case study is not a sampling research that focuses on a single generalization, because basically the main emphasis of a case study is understanding the case. A case study is a study of the uniqueness and complexity of a case so that its activities can be understood in important circumstances.

In line with the single fixed case study design that has been chosen, the research location is also limited as is the focus or research object (focus determined boundary) (Lincoln & Guba, 1985: 250). If the research is in the media, the boundary used is that media, Santosa (2021:57). The research location in this research is limited to: the Central Javanese Folklore Book in three languages. This book is a collection of folk tales from the province of Central Java and is written in 3 languages. Published by the Central Java Province Language Center in 2014. Contains 14 Central Javanese folk tales in Javanese, Indonesian, and English complete with Javanese speech-level applications in each story. Content analysis and FGD were chosen to collect the data. Data validity used data source and method triangulation. Data analysis techniques used Spradley's model such as domain, taxonomy, and componential analysis (Santosa, 2021:158).

Findings and Discussion

The Translation of *Ngoko*

In the research data, two types of *ngoko* speech levels were found by the division theory (Sasangka, 2019). The speech level of *Ngoko Lugu* and *Ngoko Alus*. However, there are several differences when the two levels of speech are translated into Indonesian and English.

Ngoko lugu

The form of *ngoko lugu's* level which is translated into Indonesian causes the level of speech as social distance to be lost. Then when translated into English, the loss of social distance is still maintained. This is because Indonesian and English are known as neutral languages which do not have a speech level that is used to speak to interlocutors with a low level of subtlety (*ngoko lugu*) like Javanese. *Ngoko lugu* is a form of Javanese speech level where all the vocabulary is in the form of *ngoko* and neutral (*ngoko* and neutral lexicon) without the inclusion of *krama* lexicon, *krama inggil*, or *krama andhap*. The *ngoko lugu* variety can be used by those who are already familiar and by those who feel they have a higher social status than their interlocutor.

Data 003:

Sunan Kalijaga to his servant in the story of Mrapen Everlasting

Fire “*Ya, entenana sawetara ning kene*”

“*Baiklah,*

tunggu saja

kalian di sini”

“Its all right.

Just wait

here!”

In the data above, the speech level used is *ngoko lugu* which was chosen by Sunan Kalijaga when speaking to his servant. The factor underlying the choice of this level of speech is the level of rank, of which Sunan Kalijaga has a higher level so he uses the *ngoko alus* level of speech to speak to his servants.

Meanwhile, the translation into Indonesian (L1) shifted because the social distance markers in this data is *ngoko lugu's* speech level from the source language could not be maintained in the target language. Furthermore, when translated into English (L2), the *ngoko lugu* speech level marker was still not found.

Data 039 :

Begawan Biyasa to his student named Bagus Kencana in the story of The Origin of Umbul Tlatar

“Anakku, Bagus Kencana, reneya!”

“Anakku, Bagus Kencana, kemarilah!” “Bagus Kencana, my Son, come here!”

In the data, the level of speech used is *ngoko lugu* which was chosen by Begawan Biyasa when speaking to his student. One of the factors underlying the choice of this level of speech was age, where Begawan Biyasa was older than his student and his position as a teacher towards his student, so *ngoko lugu* speech level was chosen to speak to Bagus Kencana as his student.

Meanwhile, the translation into Indonesian (L1) shifted due to social distance markers, in this data the level of *ngoko lugu's* speech from the source language cannot be maintained in the target language. Furthermore, when translated into English (L2), the *ngoko lugu* speech level marker was still not found.

Data 059 :

Panembahan Senopati to Dewi Lanjar in the story of Dewi

Lanjar “Ya. Muga-muga lakumu gancar lan nemoni urip kabegjan”

“Ya. Semoga perjalananmu lancar dan mendapatkan kebahagiaan dalam hidup”

“Okay, I hope your journey will be secured and successful, and you will get a fruitful and cheerfulness life”

In the data, the level of speech used is *ngoko lugu* which was chosen by Panembah Senopati to speak to Dewi Lanjar who is his people. The factor underlying the choice of this level of speech is the level of rank, where Panembahan Senopati is a leader who has a higher level of rank so he uses the *ngoko lugu* level of speech to speak to his people.

Meanwhile, the translation into Indonesian (L1) shifted because the social distance markers in this data said *ngoko lugu's* speech level from the source language could not be maintained in the target language. Furthermore, when translated into English (L2), the *ngoko lugu* speech level marker was still not found.

Ngoko alus

The speech level of *ngoko alus* also experienced a shift and was not even found in the target language, but there were several cases of data where there was no shift because the translator added a certain lexicon which indicated the respect for the interlocutor that the speaker wanted to convey in the source language. *Ngoko alus* is a form of uploading which not only consists of the *ngoko* and neutral lexicons, but also consists of the lexicons *krama inggil*, *krama andhap*, and *krama*. However, the *krama inggil* lexicon, *krama andhap* or *krama* lexicon that appears in the *ngoko alus* variety is only used to respect the speech partner (O2 or O3).

Data 018 :

Sunan Kalijaga to his sister, Dewi Rasa Wulan in the story of Mrapen Everlasting Fire
“*Aja kuwatir. Mengko Kangmas sing bakal matur supaya Rama ora duka*”

“*Jangan kawatir. Nanti kanda akan menjelaskan ke ayahanda, sehingga ayahanda tidak akan marah*”

“Dont worry. I will explain it to father so that he won't get angry with you”

Based on the data above, Sunan Kalijaga chose the level of *ngoko alus* to his sister, Dewi Rasa Wulan, one of which was to respect the person they were talking about, he is his father. So apart from the lexicon used which is *ngoko*, there are lexicons of *krama*, the words *matur* and *duka* which are used to honor the father who is being discussed. In the L1 (Indonesian) translation data, the marker indicating the utterance is *ngoko alus* was not found. The words *matur* and *duka* that the speaker uses to respect the person being discussed are translated neutrally, by words *menjelaskan* and *marah* without any level of speech markers. Furthermore, in L2 (English) translation, speech level markers were also not found.

Data 032 :

Ki Angkara to Ki Demang in the story of The Origin of Umbul Tlatar

“*Ki Demang aku nemokake tambang mas lan inten ing pereng gunung. Aku njaluk palilahmu kanggo ndhudhuk,*”

“*Ki Demang, saya menemukan tambang emas dan permata di lereng bukit. Perkenalkan saya akan menambangnya,*”

“Ki Demang, I found gold and diamond mine in the slope of hill. Please allow me to mine it,”

Based on the data, Ki Angkara chose the level of *ngoko alus* to his colleague, Ki Demang to respect him as a leader in the village. So apart from the *ngoko* lexicon, there is a *krama* lexicon, it is the word *palilah* which is used to honor his friend Ki Demang as the village leader.

In the L1 translation data (Indonesian), the marker that shows the utterance is *ngoko alus* can be maintained, it can be found in the translation of the word *palilah* to *perkenalkan*, which in Indonesian is considered smoother and respectful of the interlocutor than translated with a common word such as *izinkan*. Furthermore, in L2 (English) translation, speech level markers can still be seen from the translation of “please allow me” in English instead of just translating with the word “allow me”.

Data 063 :

Raden Bahu to Dewi Lanjar in the story of Dewi Lanjar

“*Nanging, becike kowe kudu tetep nyuwun palilah luwih dhisik marang Ratu Kidul, kepiyea wae kowe tau kepotangan budi marang piyambake,*”

“Namun, sebaiknya tetaplah minta izin terlebih dahulu kepada Ratu Kidul, bagaimanapun juga kamu pernah berhutang budi kepadanya!”
“However, I think, it is better for you to meet Ratu Kidul to get her permission first”

In the data, Raden Bahu also chose the level of *ngoko alus* to his subordinate, Dewi Dewi Lanjar, to respect the person they were talking about, namely Ratu Kidul. So apart from the lexicon used, *ngoko*, there is a lexicon for *krama*, it is the word *palilah*.

In the L1 (Indonesian) translation data, the marker indicating the utterance is *ngoko alus* was not found. The word *palilah* which the speaker uses to respect the person being spoken about is translated neutrally, *minta izin* without any level of speech markers. Furthermore, in the L2 (English) translation, speech level markers are also not found, because the words *minta izin* is translated as get her permission.

The Translation of *Krama*

In the research data, two types of *krama* speech levels were found by the division theory (Sasangka, 2019). There are speech level of *krama lugu* and *krama alus*.

Krama lugu

In *krama lugu*, the term *lugu* in *krama lugu* is not defined like *lugu* in *ngoko* which is *ngoko lugu*. *Lugu* in *krama lugu* is not defined as a variety whose entire vocabulary consists of the *krama* lexicon, but is used to mark a variety whose vocabulary consists of the lexicon of *krama*, *madya*, neutral or *ngoko* and is supplemented by the lexicon of *krama inggil* or *krama andhap*. Semantically, the *krama lugu* variety can be defined as a form of *krama* variety that has a low level of refinement.

The form of *krama lugu* speech level in Javanese which is translated into Indonesian causes the speech level as social distance to be lost. Then when it was translated into English, the loss of the *krama lugu* speech level was maintained. This is because Indonesian and English do not have a certain level of speech that is used to speak to interlocutors with a relatively low level of subtlety (*krama lugu*) like Javanese. However, in some data, the translator can maintain the marker of the level of *krama lugu* by choosing a translation of words that can be a marker of the level of speech in the target language.

Data 021 :

Jaka Supa to Sunan Kalijaga in the story of Mrapen Everlasting Fire “*Punapa saged wiji wesi semanten agengipun didamel keris, Kanjeng Sunan?*” “*Dapatkah besi sebesar ini dibuat keris, Sunan?*”

“Can this small material was made up to kris, Sir?”

Jaka Supa chose the level of *krama* to Sunan Kalijaga because Sunan Kalijaga's position and degree are higher as a leader, however this level of *krama* is included in *krama lugu* because there is an insertion in the lexicon of *ngoko*, the word *keris* which

at the level of *krama* becomes *dhuwung*. Meanwhile, for L1 and L2 translation data, markers of social distance, in this case the level of *krama lugu*, cannot be maintained because both translations in Indonesian and English tend to be neutral without any sign that the speaker wants to respect his or her interlocutor.

Data 070 :

Jaka Tarub to his mother, Mbok Randha in the story of Jaka Tarub

"Inggih sampun ta, Mbok, sakpunika sami dipunlampahi kemawon, menawi umur sampun wonten ingkang ngatur. Ingkang baken kita piyambak terus ndedonga supados dipunparingi gesang ingkang panjang,"

"Sudahlah Mbok, sekarang ini kita jalani saja, masalah umur sudah ada yang menentukan. Yang penting kita berdoa semoga diberi umur panjang,"

"Mbok, for now we just run our life, God already determines humar's life. The most important thing is we just pray may God gives us a long life,"

In the data above, the speaker, namely Jaka Tarub, chose the level of *krama* towards his mother because of family relationships where the child must respect to his mother. One way is by choosing the speech level; of *krama* when speaking. However, this level of *krama* is included in *krama lugu* because there is an insertion in the lexicon of *ngoko*, the word *umur* which at the level of *krama* becomes *yuswa*. Meanwhile, for L1 and L2 translation data, markers of social distance, in this case the level of *krama lugu*, cannot be maintained because both translations in Indonesian and English tend to be neutral without any sign that the speaker wants to respect the mother as his speech partner.

Data 224:

Citizen to Ki Sabda Guna in the story of Ki Sabda Guna

"Dhateng pundi kita kedah nguburaken jisimipun Tirtawijaya, Ki? Kita sedaya boten ikhlas ngrukti jisimipun ing desa mriki. Kados pundi menawi dipun obong kemawon?"

"Tapi, di mana kami harus menguburkannya, Ki Sabda Guna? Kami tidak rela jasadnya dikubur di desa ini. Bagaimana kalau dibakar saja?"

"But, where should we bury him Ki Sabda Guna? We don't want to bury his body in this village. We want to burn it, Ki"

Based on the data, the citizen chooses the level of *krama* towards the leader, namely Ki Sabda Guna, because the leader's position is higher than the citizen, but this level of *krama* is also included in the group of *krama lugu* speech level because there is an insertion in the lexicon of *ngoko*, the word *obong*, which is at the level of *krama* becomes *besmi*. Meanwhile, for L1 and L2 translation data, markers of social distance, in this case, the level of *krama lugu* speech, cannot be maintained because both translations in Indonesian and English tend to be neutral without any sign that the speaker wants to respect his or her interlocutor.

Krama alus

Krama alus is an uploaded form of the Javanese language whose entire vocabulary consists of the *krama* lexicon and can be supplemented with the *krama inggil* or *krama andhap* lexicon. Semantically, the *krama alus* can be defined as a form of variety of *krama* that has a high level of refinement.

As with *krama lugu*, the translation of the variety of *krama alus* into Indonesian which was then translated into English experienced many shifts because there was no equivalent to the variety of *krama alus* in the source language. However, in some data, this shift in the level of *krama alus* can be avoided by the translator by using certain lexical items that represent smoothness towards the speech partner which marks the level of speech in the source language.

Data 029 :

Jaka Supa to Sunan Kalijaga

“*Inggih, dhawuh Panjenengan badhe enggal kawula tindakaken,*” “*Baiklah, perintah Sunan akan segera saya laksanakan,*”

“Yes, I'll do your wish immediately,”

In the data, Jaka Supa respects Sunan Kalijaga as his leader by choosing a level of speech with high refinement, *krama alus*. All the lexicon used in speech is *krama* without the *ngoko* lexicon. However, in the L1 and L2 translation data, the marker for the level of *krama alus* is lost, because the translation tends to be neutral.

Data 040 :

Bagus Kencana to his teacher, Begawan Biyasa “*Inggih, Bapa*”

“*Iya, Guru,*”

“Yes, Sir,

Based on the data, Bagus Kencana respects his teacher, Begawan Biyasa, by choosing a level of speech with high refinement, *krama alus*. All the lexicon used in speech is *krama* without the *ngoko* lexicon. However, in the L1 and L2 translation data, the marker for the level of *krama alus* is also missing, because the translation tends to be neutral.

Data 190 :

The guard to the king in the story of Padusan Krakal Banyu

Anget “*Sendika dhawuh, Sinuhun,*”

“*Baik, Paduka Raja,*” “Yes, Your Highness,”

In the data above, the guard respects the king as their leader by choosing a level of speech with high refinement, *krama alus*. All the lexicon used in speech is *krama* without the *ngoko* lexicon. In the L1 and L2 translation data, the marker for the level

of *krama alus* speech is found, because the word *Sinuhun* translated to *Paduka Raja* interpreted the level of subtle speech to the interlocutor in Indonesian, then the English translation data, *Paduka Raja* translated to your highness that also interpreted the level of subtle speech to the interlocutor in L2 (English).

Conclusion

The choice of level of speech by the speaker in *Cerita Rakyat Jawa Tengah*'s book consists of various factors, there are age, rank, kinship, descent and acquaintance. All types of speech levels are found in the stories in this book, in various speech situations and factors that influence the use of these speech levels. At the speech level of *ngoko*, there is shift in translation in both L1 and L2 due to the absence of speech level markers in the target language. Meanwhile, some data was found where there was no shift due to the existence of a certain lexicon in the target language which indicates the presence of speech level markers. At the level of *krama*, both *krama lugu* and *krama alus*, there is a tendency for a shift from the source language to the first target language, Indonesian and this shift continues to English which is the L2. But, on certain data the translator can maintain the marker of the level of *krama* by choosing a translation of words that can be a marker of the level of speech in the target language.

ABSTRACT

This article exposes an expressive approach in matters of themes, symbolism, and imageries on Fatimah Asghar's poem entitled *I Don't Know What Will Kill Us First: the Race War or What We've Done to the Earth*. Through an explorative approach and qualitative method, the analysis of this paper moves around intertwinements among intrinsic elements of Asghar's poem. By using Abram's concept in an expressive approach, it is known that Asghar underlines how violence should be banished since it will only destroy the future and shape any bad memory. Her expression is clear through post-colonialism in which conflicts are the roots of environmental destruction too. The poem's theme is about environmentalism accompanied by the symbolism of nature through imageries of all five senses. In conclusion, the expressive approach explains that Asghar's poem is how nature is defined otherwise as its themes, symbolisms, and imageries are compared to the destruction left by any prolonged conflict.

Keywords: Expressive Approach, Fatimah Asghar, *I Don't Know What Will Kill Us First: the Race War or What We've Done to the Earth*, Intrinsic Elements of Literature.

Introduction

Poetry is widely mentioned as aesthetic writing. This kind of literature emphasizes verses as its main indications (Bugeja, 1994). The literary work plays on the intensity of feelings and ideas on distinctive styles that could be different from one poet to another. The term "poetry" originates from the Greek word "poiesis", which signifies the act of "making" or "forming". Therefore, poetry is in which meanings in language are intertwined to shape further understandings.

One type of poetry is the free-verse one. It does not concern or follow much on rhythm, but it focuses more on the meanings implied in every verse. It does not pay much attention to the meter or even any literary device (Khamdamova, 2022). The free-verse poem is not more formal since it does not regard any consistency. The length is also varied since the main idea is to make the poet and the poem free of any literary constraint. However, the free-verse poem is still beautiful since it still understands the matter of being aesthetic (Whitworth, 2006). The figurative language, symbolism, and even various meanings implied are still intact to give wider perspectives to the readers and the critics as well.

One of the outstanding free-verse poems is written by Fatimah Asghar entitled "*I Don't Know What Will Kill Us First: the Race War or What We've Done to the Earth*" (Asghar, 2019). The title speaks for itself that life is not about being usual, but always problematic. Asghar focuses on emotions and on how the scenes are painted to trigger the reader's imagination. She also finds further freedom to use any kind of imagery, emotion, or theme. By doing so, she indicates her most effective ways to speak to society or at least the audience. Any conflict could always be intact on the prominent, the existing, or even the latent one. This article would like to explore the themes, symbolism, and the imageries emphasized in this poem. The themes of this poem are intertwined and getting more crucial to be analyzed. The usages of symbolism and imagery are important as well since those may give a wider understanding of broader body and mind senses.

Method

The questions in this research are addressed by analyzing written material and specific hypotheses using qualitative approaches. The examination of the expressive method of topic, symbolism, and imagery on "*I Don't Know What Will Kill Us First: the Race War or What We've Done to the Earth*" is explained using literary resources. The sources came from a number of reliable websites as well as from a number of physical and digital libraries. Obtaining sources, carefully reading, comparing with other topics, quoting professional opinions in the field, and remembering to include them in a reference list are all part of the data analysis process. The stages of the methodological process understand the expressive approach of theme, symbolism, and imageries, deep reading on Asghar's poem, interpreting and analyzing the poem with existing theories, and making conclusions.

Results and Discussions

The Existence of Human Beings in Fatimah Asghar's *I Don't Know What Will Kill Us First: the Race War or What We've Done to the Earth*

Asghar is a Muslim writer who was born in Pakistan and moved away to America. Born in the United States to Pakistani immigrant parents, she navigates the complexities of being Muslim, queer, and an orphan. Her career in literary work is extraordinary since she bravely explores problems of everyday life, including racism, minority rights, and even gender equality (Asghar, 2019). In the year 2011, during the duration of her Fulbright fellowship in Bosnia and Herzegovina, she established a group focused on spoken word poetry, which she named REFLEKS. It is important to note that her fellowship was dedicated to the study of theater in countries that had been afflicted by genocide. Asghar, being a Kundiman Fellow, is also affiliated with the esteemed Dark Noise Collective. Moreover, in the year 2017, she was honored with the prestigious Ruth Lilly and Dorothy Sargent Rosenberg Poetry Fellowship from the Poetry Foundation. Furthermore, she was recognized by Forbes as one of the individuals under the age of 30 who have achieved notable success (Asghar, 2019).

Through her focuses on post-colonial studies, her poem of "*I Don't Know What Will Kill Us First: the Race War or What We've Done to the Earth*" brings more impact to recent topics on conflicts, love, and even nature points. The full lyrics of the poem are the following;

“so I count my hopes: the bumblebees
are making a comeback, one snug tight
in a purple flower I passed to get to you;

your favorite color is purple but Prince's
was orange & we both find this hard to believe;
today the park is green, we take grass for granted

the leaves chuckle around us; behind
your head a butterfly rests on a tree; it's been
there our whole conversation; by my old apartment

was a butterfly sanctuary where I would read
& two little girls would sit next to me; you caught
a butterfly once but didn't know what to feed it

so you trapped it in a jar & gave it to a girl
you liked. I asked if it died. you say you like
to think it lived a long life. yes, it lived a long life.” (Asghar, 2019)

The poem above highlights the ongoing nature of human conflict and the struggle for sustainability and gives perspective on how human beings act from the modern era until now. The age of conflict really never leaves the world of human beings since the beginning of time. Somehow, many conflicts remain unsolved; merely shape such temporary ceasefires yet leaves so many families in rubbles of their own houses and deceased families. Asghar would like to underline the severe conditions of human beings alongside any hope left for a better future (Asghar, 2019). The nuances of the poem above underline more about how the importance of community, emphasizing that even in the face of adversity, there is always a glimmer of hope for a better future and humans live individually and socially alongside any sustainability today.

There is also a comment from Asghar herself saying that the poem is about how she feels about recent everyday life. While busy things are done every single day, lingering conflicts among people and towards nature may still exist. While the world needs people to stay hand-in-hand together, individualism is getting more severe by leaving out otherness and natural entities unattended at all (Asghar, 2019).

The Importance of Expressive Approach in Analyzing Literature

Meyer Howard Abrams (1971: 6) asserts in his work on Expressive Theory that there exist four crucial components within the realm of literary work and literary criticism, which can be visually depicted in the diagram as presented below:

Abrams (1971) classifies literary criticism into four distinct theories: mimetic theory, pragmatic theory, objective theory, and expressive theory. Expressive theory, a theory which examines literary works in relation to their authors, reveals that authors possess specific intentions they wish to convey through their creations. It is clear that literary

works contain the authors' particular ideas on a particular subject. Authors always use their brains to think of something they are interested in and aim to present it. Thus, they put everything they have into their work. In other words, authors use their works as a media of communication to put their ideas to the readers (Arafah, et al., 2023).

Expressive theory, in general, focuses more on the extent to which the author successfully conveys his/her idea as the artwork's creator. Purohit (2013) says that in critical theory, expressive views of art replace mimetic and pragmatic positions. Consequently, picturing the condition of one society or the environment does not become the responsibility of literature anymore. Instead of basing their works on the outside world, authors use this new strategy to present their point of view to the public. Moreover, Abrams (1971: 22) elucidates that the fundamental essence of expressive theory lies in perceiving literary works as originating from an internal basis that subsequently becomes externalized. This implies that literary works are engendered through the authors' cognitive and emotional creative processes. Consequently, the principal origin and subject matter of literary works stem from the authors' consciousness, or in the event that external elements are involved, they are solely filtered through the authors' personal perspective and outlook.

From the former explanation, it is evident that literary compositions encompass the personal viewpoints of their authors regarding a specific subject matter. Authors inherently possess a message they wish to convey and seek to exhibit it to the world, thus deliberately infusing their works with said message. Nevertheless, it also appears that literary works reflect the characteristics of their creators. The authors' demeanor, conduct, and attitudes are discernible throughout their works, enabling readers to comprehend these traits through the analysis of the recurring patterns or elements present in the work.

Analysis of Themes in Asghar's Poem

Indicated from the title, the verses, and their implied meanings, the poem of Asghar is related to human beings and their continuation of actions. The poem digs deeper into the interconnectedness of human actions and the natural world, highlighting the devastating impact of human activities on the planet. Asghar reflects on the beauty of nature, such as the return of bumblebees and the presence of butterflies, which serves as a crucial contrast to the destructive forces of human actions. Though the title indicates such race wars, the meanings in the verses emphasize wider meanings of common conflicts, not only armed ones. The conflicts are more diverse and inevitably being felt by anyone in this world (Asghar, 2019). In other words, the poem is not totally about wars and conflicts, but it is about love being struggled and believed as a future hope. In addition, the verses indicate the usages of natural points, therefore it is possible that the poem has purpose to underline recent conditions of natural endangerment (Asghar, 2019).

Then, the poem is related to two main themes. Asghar finds solace in moments of connection with nature and with loved ones. The first one is love and the second is nature. Those aspects are departed from contemplations of existing and latent wars and conflicts, yet its purpose is not to dramatize those situations. In the first aspect, it is

about a love poem that gives an idea of moments of asking whether such presence of love is always enough (Whitworth, 2006). Love is not about being stagnant. It is a matter of a process. It is going forward to give something to the receiver. It gives contexts to live. Yet, it shows such sacrifice of oneself rather than sacrificing others.

The lines “I count my hopes” and “making a comeback” represent a movement that is full of love. It is due to hope itself containing further ideas to go forward. Any bad feeling would be amended though it may still trigger such trauma (Johnson-Laird & Oatley, 2022). By returning, people do not see the past as something that must be repeated. People will see that a new future should be realized exactly in a place where such hurtful things have happened before. That is the point of redemption shown in the matter of love (Johnson-Laird & Oatley, 2022).

Another verse “it’s been there our whole conversation; by my old apartment” also underlines that the past is still there. It is haunting as memories that keep being spoken (Šeĭa, et al., 2022). The conversation or dialogue is not a matter of being closed, but it implies the idea of being open to further amendment of various hopes coming through. People know that time goes on, and life must be so. No matter how hurtful the conflicts were, repeating them is not the answer (Khamdamova, 2022). Referring to the title, that verse makes sense since love has been eroded ever since by selfish interests that slowly degrades humanity and nature beings in general as well.

The poem also emphasizes love as something not conceptual, but understood, embraced, and practiced in everyday life. The verses of the poem are not about singular persons, but about any other else too (Šeĭa, et al., 2022). How the poem combines the words ‘I’, ‘you’, and ‘we’ is interesting since the subjects are mentioned as a whole as if they were involved in intertwined interactions. The meaning of ‘I’ is not indeed to be so subjective, but merely to show that the subject may also contribute to memories and any future hope. The word ‘you’ is so intimate that any mentioned subject is about being listed in conversation (Šeĭa, et al., 2022). The word ‘we’ is also necessary since it shows not only the combination of ‘I’ and ‘you’, but the poem also would like to ask the reader to get involved in the situation. The poem asks the readers to think more about anything that has passed in everyday life. How the way indicates conflicts must always be realized and fixed for better next time (Johnson-Laird & Oatley, 2022). It is also seen that love is being practiced in the sense of mentioning all subjects.

The poem also shows how differences among us could create harmony rather than conflict. It underlines ideas of contradictions among verses to show a big picture of current condition and which one is the best for the future. In a way, the poem includes “snug tight”, “chuckle”, “rests on”, “sit next to”, and “lived a long life”. Those expose the idea of warm, happy, and closeness among beings in which comfort and safety is among them. On the other way, the poem also shows the words “hard to believe”, “take grass for granted”, “caught a butterfly”, “didn’t know what to feed it”, “trapped in a jar”, “gave it to a girl”, and “died”. Those are the words of such conflicts even the end of any entity.

The contradictions are clear and those explain how life is more complex as good and bad, love and hate, even life and death, do exist. Indeed, by stating so, the poem would like to show how the former way is better than the latter way. However, the latter one must also exist so that the former could always come to surface to give wider hopes. In this case the love is not totally about being positive, but it also appreciates any bad memory that is still intact, forgive it, and move on to the next phase of life.

In the second point, it is a nature-themed poem. Asghar writes the poem by intentionally using various attributes of natural beings. The attributes are clear as an appreciation to any natural matter, an inclusion of human beings in natural conception, and a protest to those who keep damaging earth. For Asghar, the poem in subtle shows that nature itself is already sustainable, yet human beings always try to stop its process. Even many people do not believe that climate change exists by abandoning such proof that the glacier is slowly melting.

The poem is a tribute to nature by actualizing relations of humans and nature. The writing shows how humans have been so far away from nature and makes it merely a tool to survive. The words of 'take grass for granted', 'you caught a butterfly once but didn't know what to feed it', 'you trapped it in a jar', and if it died' expose the way how humans behave by making nature merely as objects. The butterfly that was trapped in a jar and given to a girl symbolizes the fragility and beauty of life, as well as the human tendency to both cherish and harm nature. Asghar reflects on personal experiences, such as the memory of a butterfly sanctuary near their old apartment, which serves as a sanctuary for both the butterflies and even more of her own memories. This sanctuary represents a space where nature and personal history intersect, offering a sense of peace and belonging. Things are going too fast and human beings only consider making progress without knowing any side effects of it (Sunnatillayevna & Bakhshilloevna, 2023). Nature beings must be appreciated more than human beings understand the meanings of progress. Even people consider more to call for arms rather than call for action to stop deforestation.

The poem also shows how human beings move by the flow of nature as well. While personification works as if any object lives like human beings, this poem would like to show that human beings are part of nature (Fadilla, et al., 2024; Sunnatillayevna & Bakhshilloevna, 2023). It is not nature that lives like humans but in reverse. The poem underlines how "I count my hopes" is in line with "the bumblebees are making a comeback" as if what humans do has already done by bumblebees before. "Behind your head a butterfly rests on a tree" shows how such an insect already knows when and where to stop and start again. It is not humans as the center of the earth, but the natural beings have done various actions known by human beings.

In reverse, the poem is also a protest against any deed of damaging nature. Human beings think that they know natural beings as they know themselves. In reality, human beings keep damaging their selves and the earth as well. They do not really know who they are since they keep fighting against nothing. The two last stanzas show how human beings do things unequivocally towards nature.

The verse "you caught a butterfly once but didn't know what to feed it" shows how people think nature is only used as a toy for them. People tend to manipulate, but not to

preserve. Meanwhile, a butterfly since it was a caterpillar already has an instinct for what it desires to eat. Human beings could only cry when they were first born. Even in adolescence, many people still do not know where and how to eat. It is proved by the verse of the poem that natural beings have moved forward further than human beings, yet humans are those trying to gain profit from nature.

The following verse is more intriguing since “so you trapped in a jar & give it to a girl you liked” shows how love for human beings used to be so arbitrary for themselves only. Even many roses must die to be given to show that love is above anything else. The poem is so critical in this sense by saying that what human beings do is unnatural at all. They tend to be so selfish that they will sacrifice anything but themselves. Being trapped in a jar also means such a force done from humans to natural beings. Even if it is given to someone that he/she likes, it will not leave a situation of forceful doing by humans.

The last verse is eerie too since it shows that life is much better before human beings intervene. The words “you say you like to think it lived a long life. yes, it lived a long life” show that the long life existed before human beings trapped it in a jar. Nature beings belong to natural places as their main habitats, not in small places without any affection (Shodiyevna, 2022; Yunusoğlu, 2023). The long life also shows how nature will always exist even if human beings vanish. The past tense of “lived” also indicates that the butterfly has lived a good life long before a human arbitrarily caught it, separated it from its habitat, and trapped it in a jar.

Symbolism and Imageries in Asghar’s Poem

Asghar uses various symbolisms in this poem. At most times, she underlines the matter of nature beings to show that humans must emphasize more hope towards the existence of nature itself (Fadilla, et al., 2024; Yunusoğlu, 2023). If only humans leave nature alone then the earth could redeem itself towards a better world. Further interventions of prolonging pollution will only worsen the earth's condition. By accentuating plants and insects, Asghar would like to suggest that humans do not live alone on earth. There are abundant species that are being listened to, also the sound of their perpetual lives (Fadilla, et al., 2024; Yunusoğlu, 2023).

The imagery in Asghar's poetry is diverse and evocative. Visual imagery is used to describe settings and objects, such as the bumblebees and the purple flower, which symbolize love and spiritual depth. The word bumblebees in this poem indicates how love should always be spread. Bumblebees making a comeback means that they will preserve honey and return to give more love (Comanifesting.com, 2023). It is also a matter of energy and activity in which honey is a symbol of a good gift as an idea of affection. Bumblebees are also the guardians of the natural world since this species intends to find good nectar in every single being only to be compiled for goodness too. When bumblebees return, the pollen being spread also will preserve more lives (Comanifesting.com, 2023). The sense of bumblebees is being free but still with greater purposes. Bumblebees are the perfect symbol of love, which could never be constrained or even controlled.

The purple color symbolizes spiritual depth in love. It also indicates loyalty as love should never be moving from one to another (Verywellmind.com, 2022). Love should be planted deeply so that further affections can be attained. Purple is a combination of red and blue color in which high energy is intersected with calm color. In this case, purple is calmer since peace is similar either (Verywellmind.com, 2022).

In this poem, the purple color is compared to the orange one. Both are different in their depth as it is said "we both find this hard to believe". The mention of Prince's favorite color being orange and Asghar's favorite color being purple highlights the contrast between the natural world and human constructs. The purple is opposed to the orange one. The orange is more active in a positive sense than the purple, which is calmer. Orange color more focuses on being adventurous, ambitious, and social. Those colors are contrasted to indicate that conflicts may always happen, but as they are still colors, they may have the same fundamentals (Fadilla, et al., 2024; Verywellmind.com, 2022). Orange and purple are different, but they are made from the same red color. Therefore, the symbolism of the colors shows that abundant differences will always still reflect sameness.

Another symbolized color is green. The words "today the park is green, we take grass for granted" mean that greenness is the sense of being natural. Nature's color is green so that it is always intact in every being (Verywellmind.com, 2022). The grass is also a matter of being natural and taking it for granted means that human beings used to take anything forcefully from nature beings. There is always violence done by human beings in which natural beings are the victims (Dinakhel, et al., 2022; Smarandreetha & Pasopati, 2024). While humans do things instantly, nature moves slowly but always grows for exact purposes, as the butterfly does in this poem.

Besides, there are some personifications listed in the poem. Those are "the bumblebees are making a comeback", "the leaves chuckle around us", and "a butterfly rests on a tree". Seen from figurative language, those words are how any being is seen by humans' actions (Dinakhel, et al., 2022). However, in reality, it is the other beings' actions adapted to humans' senses. The poem proves this statement by implicitly saying that nature always moves in its sense, and human beings should understand its reality as it is. Figurative language is not to see nature beings in humans' conception, but should be in reverse (Dinakhel, et al., 2022; Smarandreetha & Pasopati, 2024). The poem also touches on the theme of extinction, as Asghar reflects on the potential demise of bees and butterflies. The image of a butterfly sanctuary near Asghar's old apartment serves as a reminder of the interconnectedness of nature and human experience.

The imageries in this poem are quite diverse. First, it states about visual imagery. The bumblebees, purple flower, orange color, green grass, and a jar show visual imagery. From those aspects, the poem indicates that places are plural (Yunusoğlu, 2023). This is also a characteristic in free-verse poems in which inconsistency in rhythm is exposed through plural understandings of settings. Bumblebees are visualized as an animal that produces honey as a symbol of gift (Comanifesting.com, 2023). The purple flower makes people imagine such a kind of lavender or orchid in the same sense. Even a jar is imagined as something being closed, which makes the audience think that it is a place to contain and even to stop something.

The auditory imagery is indicated through "the leaves chuckle around us" and "it's been there our whole conversation". The former underlines the idea that leaves moved by wind could make a sound that looks like someone laughing. The chuckle means happiness so the leaves doing so gives the meaning that nature is always good. The latter is about the conversation that may prolong for some time and give the sense that something is being talked about intensively (Pasopati, et al., 2024; Shodiyevna, 2022). Conversation is showing more talking than dialogue so it could shape further auditory imagery as well.

The next imagery is the tactile one. In this aspect, every movement in the poem could give meaning to the essence of it. Those are "the bumblebees are making a comeback", "caught a butterfly", and "it lived a long life". The three of them show that actions in words could give understanding to the audience that a thing changes its place from one to another by bringing or leaving such objects. As explained above, the moving bumblebees are the way love is spread and may flourish in other lives as well. Catching a butterfly means an effort to make a gift but by engaging violence against nature being. Living a long life shows how life is about a period in which anyone fills it with various movements (Shodiyevna, 2022).

Conclusion

The analysis of Asghar's poem is indicated through Abram's expressive approach. The approach gives better perspectives to explore more about themes, symbolisms, and even imageries of the poem. The expressions of the poem are related to how Asghar builds her world from the intertwined framework between environmentalism and war. Asghar's poem is about how nature is defined otherwise as its themes, symbolisms, and imageries are compared to the destruction left by any prolonged conflict. She successfully shapes words that provoke people's awareness of any destruction made by human beings to any nature being on earth.

Universitas Teknokrat Indonesia

Abstract

The purpose of this study is to examine the representation of the Papua conflict in international news media through the lens of Critical Discourse Analysis (CDA), specifically using Norman Fairclough's three-dimensional model. This model allows us to focus on the textual analysis of media coverage, uncovering how language choices reflect underlying power dynamics and ideologies. The data were collected from four major international news outlets, CNN, BBC, The Jakarta Post, and Al Jazeera covering the kidnapping of a New Zealand pilot and the related military actions in Papua from April 2023 to August 2024. The findings show that media representation often employs specific linguistic strategies, such as nominalization and passive voice, which shape how the conflict and the actors involved are portrayed. This confirms that the media's word choices and narrative structures influence public perception, emphasizing certain viewpoints while minimizing others, thus reflecting ideological and power-laden discourse.

Keyword Papua conflict, Critical Discourse Analysis, International news media, Textual analysis

Introduction

Indonesia is the world's largest archipelago of more than 17,000 islands, and Papua is one of its easternmost regions that is rich in natural assets but conflict-ridden. Over 500,000 West Papuans have died in the struggle for West Papuan independence (Evans, 2019). This list was updated in October 2019 with an additional forty deaths. However, as the government deliberately slows down internet access and restricts international journalists' access to the region, obtaining accurate information is a challenge (Weedon, 2019). Since Papua was annexed by Indonesia through the controversial 1969 Act of Free Choice (PEPERA), it has been under ongoing conflict between the Indonesian government and separatist movements demanding independence. This prolonged conflict has attracted international attention, particularly due to frequent human rights violations and violence involving separatist groups and the Indonesian military. Papua has a long history of struggle for independence, which continues to this day, and has attracted global media attention in recent years due to the escalation of violence and increasingly complicated political issues.

In February 2023, Philip Mehrtens, a New Zealand pilot, was taken hostage by the West Papua National Liberation Army (TNBP) after landing a small commercial plane in the remote district of Nduga, Papua, Indonesia. The TNBP, an armed separatist group seeking independence for Papua, captured Mehrtens and then used him as a tool to demand international intervention and recognition of Papuan sovereignty. Over the past year, the situation has intensified, with recent reports indicating ongoing violence between the rebels and Indonesian military forces. TNBP also has claimed responsibility for several attacks on Indonesian military operations to look for and rescue Mehrtens. This ongoing conflict highlighted the complex interplay between power, ideology, and media representation in international coverage of the Papuan independence struggle.

This situation attracted international public attention and generated significant social interest due to its dramatic nature and wider implications for geopolitical dynamics. The prolonged hostage crisis highlighted the ongoing tensions between separatist movements and governments in the conflict area, drawing attention to issues of human rights, sovereignty, and international diplomacy. Media portrayals of the Papuan conflict, particularly through the lens of violence, negotiation, and humanitarian concerns, shape public perceptions and discourse on these complex issues. Furthermore, media framing of the conflict can influence global political attitudes and responses, making it crucial to understand how different narratives are constructed and disseminated. Analyzing these representations not only highlights the specific case of Papua, but also contributes to broader discussions about media influence, power relations, and the role international news plays in shaping global understandings of conflict.

The phenomenon of media representation of the Papuan conflict is linguistically interesting because it reveals how language constructs and preserves certain narratives and ideologies. The way the media portrays separatist groups, the Indonesian military, and the hostage situation itself can significantly influence public perception and the

belief in the legitimacy of the parties to the conflict. Linguistic choices, such as the use of terms like “rebels”, “terrorists”, or “freedom fighters”, as well as the characterization of actions as “attacks” or “retaliations”, play an important role in shaping opinions about the conflict. By analyzing these linguistic elements through Fairclough's critical discourse analysis, we can reveal how media language reflects and reinforces power strategies, political interests, and ideological positions in the representation of international conflicts.

Theory and Method

This study uses a qualitative approach with Fairclough's Critical Discourse Analysis (CDA) to examine how the Papuan conflict is represented in international news media. The qualitative approach is suitable here because it allows us to explore the various meanings and perspectives embedded in media texts, which are socially and historically constructed (Creswell, 2003). We collected data from 4 international news websites. There are CNN, BBC, The Jakarta Post, and Al Jazeera Newspaper covering the news about the kidnapping of the New Zealand pilot and related military actions from April 2023 to August 2024.

The authors chose Norman Fairclough's theory in Critical Discourse Analysis (CDA) because this approach helps us understand how language is not only used to communicate but also to influence the way we see the world and understand social issues (Fairclough, 1992). In the context of the Papuan conflict, the media has a big role in shaping public opinion. By using CDA, we can analyze how word choices, sentence structures, and narratives used by international media can reflect power, ideology, and certain interests.

Textual analysis is the first phase in Fairclough's three-dimensional model of Critical Discourse Analysis (CDA), which focuses on examining the linguistic features of a text. This involves analyzing elements such as modality, active and passive voice, and nominalization to understand how these features contribute to the construction of meaning within the text (Pranoto & Yuwono, 2019). The goal of this analysis is to uncover the underlying structures and choices that shape the content and its interpretation.

In Fairclough's Critical Discourse Analysis (CDA), the first phase is textual analysis, which looks at the language used in a text to understand how meaning is shaped. This includes examining modality, active and passive voice, and nominalization. Modality uses words like "may," "might," and "must" to add extra meaning to a sentence. Active voice shows who is doing the action, while passive voice focuses on the action itself (Fairclough, 1989). Nominalization involves turning verbs or adjectives into nouns, which can hide who is responsible for an action (Fairclough, 1989). For example, instead of saying, "The government attacked the rebels," it could be changed to "The attack on the rebels occurred," making it less clear who did the action (Pranoto & Yuwono, 2019).

Findings and Discussion

In analyzing the findings, the researchers focused solely on the textual analysis (description) according to Fairclough's three-dimensional model. This phase involves examining linguistic features such as nominalization, modality, and active & passive voice, in media texts to understand how language constructs meaning.

Nomination

In representing different groups involved in the Papua conflict, the international news articles used many nominations that were constructed through the names of people with important roles or institutions. Nomination is a way of using language to refer to people, places, things, or events. By using this strategy, the writer or speaker can show political, social, or even psychological interests or reasons (Reisigl & Wodak, 2001). Additionally, it can be understood that these nominations can be used and referred to in different ways (Suprayogi, et al., 2021). The nominations are explained in the charts below.

Chart 3.1 Nomination of Individuals

From the chart above, it can be seen that the name *Phillip Mehrtens* (New Zealand pilot) was used the most, with a total of 40 mentions across all four news sources. Specifically, *The Jakarta Post* mentioned *Phillip Mehrtens* the most, with a frequency of 16 times, followed by *Al Jazeera* (9), *CNN* (8) and *BBC* (7). This highlights that the pilot's identity, as an important figure in the Papuan conflict, became a focal point in each media outlet's coverage.

Other individuals such as *Julius Widjojono* (military spokesperson) and *Sebby Sambom* (TPNPB spokesperson) were less frequently mentioned, but still relevant to the

representation of official sources or rebel communications. *Julius Widjojono* was most frequently mentioned by *Al Jazeera* (3) and the *BBC* (2), while *Sebby Sambom* appeared the most in *The Jakarta Post* (4).

Egianus Kogoya, the rebel leader, was only mentioned by *The Jakarta Post* (5), which emphasize the newspaper's focus on identifying key actors in the conflict. Meanwhile, *Pregnant Women* and *Armed Men*, which are used to generalize certain figures involved in the conflict, were only mentioned in a few isolated cases, highlighting their lack of prominence in the narrative.

Chart 3.2 Nomination of Institutions

The chart above shows that the most frequently mentioned institutions was the *Indonesian military/Soldiers*, which mentioned the most by *CNN* (14), followed closely by *Al Jazeera* (12) and *BBC* (10). However, *The Jakarta Post* only mentioned them once, which may reflect a focus on other actors in the conflict or different narrative strategies between local and international media.

The *Separatist Rebel/Fighters* received significant attention, with *CNN* mentioning them the most (14), followed by *The Jakarta Post* (9). *Al Jazeera* (4) and *BBC* (6) had significantly fewer frequency, which might suggest these media placed a relatively less emphasis on identifying rebel groups directly and instead refer to them by more general terms.

The West Papua National Liberation Army (TPNPB), a specific faction of the separatist movement, was mentioned the most by *Al Jazeera* (5), which indicates that the media distinguishes between rebel forces in general and more specific organized groups. Other media outlets mentioned *TPNPB* with less frequency, such as *CNN* (3), *The Jakarta Post* (2) and *BBC* (1).

Mentions of *the United Nations (UN)* were more balanced among the sources, with *BBC* having the most (3), followed by *Al Jazeera* (3) as well as *The Jakarta Post* and *CNN* (2) each. These relatively even mentions suggest that international institutions such as *the UN* were generally referenced in all coverage, which likely provided a global perspective on the conflict.

New Zealand Government was mentioned more by *Al Jazeera* (2) and *BBC* (2), while *The Jakarta Post* and *CNN* only mentioned it once each. This reflects the relevance of the New Zealand pilot hostage situation in international news coverage, while local sources such as *The Jakarta Post* may focus more on Indonesia's role in the conflict.

Nominalization

In the context of the news articles about the Papua conflict, nominalization is employed to create a more formal tone and sometimes to obscure the agency behind actions. The use of nominalization in these articles can depersonalize actions, making them appear more neutral or inevitable, which could affect readers' perceptions of the conflict and the involved parties.

Table 3.1 Nominalization used by The International News Article

Words	The Jakarta Post	CNN	Al Jazeera	BBC
Attack	1	2	3	3
Release	1	1	2	0
Negotiation	0	1	0	1
Clash	0	0	0	1

Based on the table, the words *Attack* and *Release* are used more frequently across news sources than *Negotiation* and *Clash*. *Attack* appears the most, with *BBC* and *Al Jazeera* using it 3 times, followed by *CNN* with 2 times, while *The Jakarta Post* only once. The word *Release* was used a fair amount, with *Al Jazeera* mentioning it twice, and *The Jakarta Post* and *CNN* using it once. Meanwhile, *Negotiation* and *Clash* were used less frequently; *Negotiation* appeared once on *CNN* and *BBC*, while *Clash* was only mentioned once by *BBC*. This suggests that the focus of news coverage tends to

emphasize the more aggressive aspects of the conflict such as attacks, rather than diplomatic efforts such as negotiations or small-scale disputes such as clashes.

Table 3.2 Sample of Nominalization Data

Datum	News Media	Clause
1	Al Jazeera	<i>The West Papua National Liberation Army, the military wing of Papua's main separatist group, claimed responsibility for an attack on Saturday that they said killed nine soldiers.</i>
2	The Jakarta Post	<i>Papua armed rebels ready to free New Zealand pilot held for over a year Kogoya has agreed to release Mehrtens and is readying a plan to do so, the spokesperson, Sebby Sambom, said, adding that it could take up to two months.</i>
3	CNN	<i>The rebels said they'd proposed peace negotiations with the New Zealand and Indonesian governments, but for two months their letters had been ignored.</i>
4	BBC	<i>Rebels later claimed nine soldiers were shot dead in the clash, while the Associated Press cited military sources that put the death toll at six.</i>

In Datum 1, The word "attack" was used by Al Jazeera to describe a specific event where the West Papua National Liberation Army (TPNPB) claimed responsibility for a violent incident. This nominalization was derived from the verb "to attack" and converted into the noun "attack." The function of this change is to emphasize the nature and impact of the violent acts by the rebels in relation to the ongoing conflict. Al Jazeera used the nominalization "attack" when discussing the seriousness and consequences of the rebels's actions. It said that The West Papua National Liberation Army (TPNPB) has claimed responsibility for an attack that resulted in the death of nine soldiers on Saturday. In this context, Al Jazeera aimed to convey the seriousness of the incident carried out by the rebels, which had significant implications for both the

military forces and the broader conflict. The use of the term "attack" emphasizes the aggressive and hostile nature of the incident, underscoring the intensity of the conflict and its impacts. By nominalizing the verb, the focus is placed on the event itself, rather than on the actors performing the action, which helps convey the seriousness and scale of the violence involved.

In Datum 2, the word 'release' is a nominalization, which means the word is changed from the verb 'to release' to the noun 'release'. The Jakarta Post uses this word to describe the planned action to release New Zealand pilot Phillip Mehrstens. Instead of focusing on the act of release, the nominalization shifts the focus to the outcome of Mehrstens' release. The article explains that Kogoya, the Papuan rebel leader, has agreed to release Mehrstens after holding him for more than a year, although it may take up to two months. By using the word 'release', the article emphasizes the importance of this outcome, highlighting that the rebels are committed to the eventual release of Mehrstens. This use of nominalization draws attention to the resolved situation, rather than the process of getting there, which marks an important development in the conflict.

In Datum 3, the nominalization "negotiations" is used. The word "negotiations" comes from the verb "to negotiate" and has been turned into a noun. CNN used this word to describe the process the rebels wanted to have with the New Zealand and Indonesian governments in order to reach peace. By using "negotiations," CNN focused on the idea of discussing or talking for peace, rather than on the action of talking itself. The rebels said they had tried to start peace negotiations, but for two months, their requests had been ignored. In this case, CNN wanted to show the readers that the rebels were asking for peaceful discussions, but no action had been taken by the governments involved. The nominalization helps the news focus on the rebel's desire for peace as an important part of the story, rather than the specific details of how they tried to start the talks.

In Datum 4, the word "clash" is a nominalization, which means it was turned from the verb "to clash" into the noun "clash." The BBC used this word to talk about a violent fight between rebels and soldiers. Instead of saying the groups "fought" or "clashed," using the noun "clash" puts the focus on the event itself. The BBC reported that rebels claimed nine soldiers were killed during the "clash," while the military said six soldiers had died. By using the word "clash," the BBC highlights the violent confrontation as an important event in the conflict, showing how serious the fight was and its impact on both sides.

The most commonly used nominalization was "attack," showing that the media wanted to stress the violence and aggression in the conflict. The reports framed the Papua conflict around the violence caused by the rebels and its consequences. There were differences between the news sources. *Al Jazeera* emphasized the violence with words like "attack," while *The Jakarta Post* focused more on the potential for resolving the conflict, using the word "release" to highlight a positive outcome. *CNN* discussed peace efforts, using "negotiations" to show the rebels's desire for dialogue. *BBC*, however, focused on the fighting, using "clash" to highlight the ongoing military confrontations. In summary, *Al Jazeera* and *BBC* concentrated on the violence, while *The Jakarta Post* and *CNN* emphasized possible peace and resolution. Different outlets presented the conflict in different ways, based on their focus.

Modality

Modality refers to how language expresses the speaker's attitude toward the truth or certainty of a statement (Fairclough,1992). It uses modal auxiliary verbs like will, would, and could.

Table 3.3 Modality Auxiliary in International News Article

Auxiliary	The Jakarta Post	CNN	Al Jazeera	BBC
Could	3	1	0	0
Will	1	0	1	1
Would	0	1	0	1

Based on the table, it can be seen that the auxiliary "will" was most frequently used by *Al Jazeera*, *The Jakarta Post*, and *BBC*, as it was used 3 times in total across these news articles. After the auxiliary "will," the journalists used the auxiliary "could" 4 times, which suggests possibility or potential future events. The third auxiliary that was used more often was "would," which appeared 2 times, reflecting hypothetical situations or potential outcomes.

The use of the auxiliary "will" indicates that the international news articles were focused on presenting future events or actions with certainty. It suggests that the media was aiming to portray upcoming developments with confidence, showing a stronger prediction or promise of future actions or results. "Could" adds a level of uncertainty or possibility, while "would" reflects hypothetical situations, which could suggest how things might have happened differently or what could happen under certain conditions. This usage of modal auxiliaries highlights the different levels of certainty, possibility, and hypothetical scenarios being communicated by the international news media.

Table 3.4 Sample of Modality Data in International News Article

Datum	News Media	Clause
5	CNN	<i>They said New Zealand and the UN had an “obligation to urge the Indonesian Government to stop military operations” and said peace talks could be conducted under a “neutral third party, namely the UN organizational body.”</i>
6	The Jakarta Post	<i>Kogoya has agreed to release Mehrtens and is readying a plan to do so, the spokesperson, Sebby Sambom, said, adding that it could take up to two months.</i>
7	Al Jazeera	<i>Widjojono said the military will intensify the operation to rescue Mehrtens because they have identified the pilot’s location.</i>
8	BBC	<i>A video of Mr Mehrtens surrounded by heavily armed men was later released by rebels, who have said they will release him if Papua is granted independence.</i>
9	CNN	<i>The TPNPB, designated by the Indonesian government as a terrorist group, originally said that Mehrtens would not be released until Jakarta acknowledged Papuan independence and withdrew its troops from the region.</i>
10	BBC	<i>A TPNPB spokesman previously told the BBC Mr Mehrtens was being held in a remote rebel stronghold and would be used as “leverage” in negotiations.</i>

In datum 5, CNN used the auxiliary "could" in this sentence to show a possibility. It suggests that peace talks might happen, but it's not certain. By using "could," CNN shows that the talks can be done, but only if certain conditions are met, like involving a

neutral party, such as the UN. This helps show that the situation is flexible, and things might change depending on different factors.

In Datum 6, The Jakarta Post used the word "could" in the sentence to show that the exact timing for the release of Mehrtens is not certain. The word "could" means that while Kogoya plans to release the pilot, the exact time it will happen is not fixed and might change. This helps to let readers know that the release might take longer than expected and that there are some unknowns in the situation. By using "could," the article makes it clear that there might be delays or changes in the plan, and it sets realistic expectations for the readers about when the release might actually happen.

In Datum 7, Al Jazeera used the auxiliary "will" in the sentence to express certainty about future actions. The word "will" indicates that the military is committed to increasing their efforts to find and rescue Mehrtens. This use of "will" shows that there is a clear plan and determination from the military side. It aims to assure readers that steps are being taken and that there is confidence in successfully locating and rescuing Mehrtens. By using "will," the article emphasizes the decisive and proactive nature of the military's actions, suggesting that the operation is moving forward with strong intent and expected results.

In Datum 8, BBC used the auxiliary "will" in the sentence to express the rebel's strong commitment to a future action. The word "will" indicates that the rebels are certain about their intention to release Mr. Mehrtens, but only if Papua is granted independence. This usage of "will" highlights that the release is dependent on a significant political change and emphasizes the rebel's strong stance and clear conditions for their action.

In Datum 9, CNN used the auxiliary "would" to show what the TPNPB's conditions were for releasing Mr. Mehrtens. The word "would" is used here to indicate a future action that was expected under certain conditions. It means that the TPNPB had set a clear condition that Mr. Mehrtens' release was dependent on Jakarta recognizing Papuan independence and withdrawing its troops. This helps readers understand that the TPNPB's promise was not immediate but was tied to significant political changes.

In Datum 10, BBC used "would" in the sentence to talk about what the TPNPB planned to do in the future. It means they planned to use his captivity to get something they wanted in the negotiations. By using "would," the BBC emphasizes that this was the TPNPB's future plan, not something that had already happened.

Active and Passive Voice

Table 3.5 Active and Passive Voice in International News Article

	The Jakarta Post	CNN	Al Jazeera	BBC
Active	26	24	21	21
Passive	2	14	8	13

Based on the table, it shows the number of active and passive sentences used in each news article. From The Jakarta Post, there were 26 active sentences and fewer passive ones, indicating the article focused more on the actions taken by the rebels and military forces. In CNN, there were 24 active sentences and 14 passive ones, which shows a balance but still puts more focus on what is happening rather than on the results or consequences. Al Jazeera had 21 active and 8 passive sentences, again focusing heavily on the actions of the rebels and military, with little emphasis on the outcomes or people being affected. Finally, BBC used 22 active and 12 passive sentences, continuing the trend of prioritizing what different groups were doing over the effects of those actions. Across all these articles, active sentences were more common, showing that the news outlets mainly highlighted the events, such as attacks, kidnappings, and military operations, rather than focusing on the victims or consequences. This suggests that the news articles were more focused on telling the story of the conflict by explaining who did what, instead of centering on the effects of those actions on the people involved. Overall, the news coverage seemed to emphasize the developing events, with less attention on the outcomes or those affected by the conflict.

Table 3.6 Sample of Active and Passive Voice in International News Article

Datum	News Media	Active	Passive
11	The Jakarta Post	<i>((Indonesia has previously said)) ((it had prioritized))</i> talks with religious and community leaders to	Reuters Jakarta Sat, August 3, 2024, A man, identified as Philip Mehrstens, <u><i>((the New Zealand pilot who is said</i></u>

free the pilot, as ***((a military operation in the rugged highland area presented))*** ***to be held))*** hostage by a pro-independence group, stands among the separatist fighters in Indonesia's Papua region, *in this undated picture released* on February 14, 2023

12 CNN ***((The rebels said))*** the attack on the Yal military post was “revenge” for an Indonesian military operation in the area in late March, when ***((troops killed a pregnant woman))*** and two rebel fighters. In a televised press conference on Sunday, *Indonesia’s military said* ***((one of their soldiers had been killed))*** while combing the area near where Mehrtens is believed to be held.

13 Al Jazeera ***“((Widjojono said the military will))*** intensify the operation to rescue Mehrtens because ***((they have identified))*** the pilot’s location” ***“((Mehrtens was kidnapped by the rebels))*** at an airport in the remote Nduga district in February.”

14 BBC ***“((At least one Indonesian soldier has been killed))*** in a rebel attack while searching for a kidnapped New Zealand pilot in the Papua region, ***((officials say.))*** ***“((The Indonesian troops were attacked))*** on Sunday while searching for Mr Mehrtens near a separatist stronghold in the mountainous Nduga district, the military said.”

In Datum 11 shows how different sentence structures are used in the Jakarta Post article. The first sentence highlights actions taken by Indonesia. It explains that Indonesia has previously mentioned it prioritized talks with leaders to free the pilot. This sentence uses active voice, focusing directly on who is performing the actions, in this case, Indonesia. In contrast, the second example uses passive voice. It describes the New Zealand pilot, Philip Mehrstens, who is mentioned as being held hostage by a separatist group. The focus here is on what happened to the pilot rather than who is holding him. This passive construction shifts the attention from the doer (the separatists) to the state of being held hostage.

In datum 12 from CNN, the first sentence or the active voice, It tells us that the rebels claimed their attack was revenge for an earlier military operation. This sentence focuses on the rebels and their reason for the attack, making it clear who is performing the action. The second sentence which is passive voice shows that one soldier was killed, but doesn't say who did the killing. This sentence emphasizes what happened to the soldier rather than who was responsible for it. By focusing on the outcome rather than the actor, the passive voice shifts the attention to the result of the event.

In datum 13, the Al Jazeera article uses both active and passive sentences to convey information about the rescue operation for Phillip Mehrstens. The active sentence highlights that Widjojono, a military spokesperson, stated that the military will increase their efforts to rescue Mehrstens. This sentence focuses on the actions of the military and who is making the statement. On the other hand, the passive sentence describes the event of Mehrstens being kidnapped. It emphasizes the action done to Mehrstens, rather than who performed the action. This way of presenting the information shifts the focus from the rebels who kidnapped him to the fact that the kidnapping happened.

In Datum 14, The first example, written in active voice, clearly shows who is doing what. It tells us that gunmen are the ones who shot a soldier and then attacked again. This style makes it easy to understand who is responsible for the actions and what exactly happened. In contrast, the second example uses passive voice. It focuses on what happened to the Indonesian troops rather than who did it. The sentence highlights that the troops were attacked while they were searching for the pilot, but it doesn't mention who attacked them. This way of writing shifts the attention from the doer of the action to the action itself and its impact on the troops.

Conclusion

This study looks at how the Papua conflict is portrayed in international news media using Fairclough's Critical Discourse Analysis (CDA) to understand the language and methods used by different news outlets. It examines how CNN, BBC, The Jakarta Post, and Al Jazeera reported on the kidnapping of a New Zealand pilot and related military actions, showing that each outlet uses different words, styles, and focuses based on their audiences and interests. The research finds that word choices like "attack," "release," and "negotiations," along with the use of active or passive voice, can influence how readers view the conflict, either by highlighting violence or focusing on peace efforts. The study also shows how quoting directly or indirectly can shape the tone and direction

of the story, reflecting the political views of each media outlet. For example, The Jakarta Post emphasizes Indonesia's diplomatic efforts, while CNN and Al Jazeera focus more on violence and human rights issues. The BBC takes a balanced approach, offering both historical context and current events. Overall, the research highlights how media reporting can shape public understanding of the conflict, emphasizing the need to recognize biases and influences in news coverage, which can affect global opinions and policies.

Abstract

This study explores the schematic structure and metadiscourse features of the educational video series "Video English with Rebecca," specifically focusing on the segment addressing the confusing English grammar points "there is" and "there are." The research analyzes how the video series organizes instructional content through schematic structures, such as the layout of lessons, progression of examples, and reinforcement of key concepts, to clarify these commonly misunderstood grammatical forms. Additionally, the study examines the metadiscourse strategies employed by Rebecca to enhance viewer comprehension and engagement, including her use of explanations, examples, and interactive feedback. By evaluating these elements, the research aims to assess the effectiveness of the video in addressing grammatical confusion and providing clear, accessible instruction. The findings highlight how effective schematic structuring and strategic metadiscourse can improve language learning outcomes and offer practical insights for designing educational content that effectively tackles complex grammar issues.

Keyword: English grammar instruction, Metadiscourse, Schematic structure.

Introduction

English is important because English is the most widely spoken language in the world, often used as a common language among people from different countries. Learning English is a new language that enhances cognitive abilities, such as problem solving and multitasking, and can improve memory. Learning English independently offers several advantages that can enhance your language skills and overall development. You can focus on areas where you need improvement, whether it's grammar, vocabulary, or pronunciation. Additionally, there are numerous free online resources, apps, and materials available to help you learn English, making it a cost-effective option. Learning independently can also be more rewarding as you set your own goals and celebrate your achievements, boosting your motivation. Moreover, you develop the ability to overcome challenges and find solutions on your own, improving your problem-solving skills. Finally, learning English independently can expose you to diverse cultures and perspectives, broadening your horizons.

Structure and metadiscourse markers in English teaching videos are essential because they enhance comprehension and engagement by providing a clear, logical organization of content and guiding viewers through complex information. A well-structured video helps learners follow the flow of ideas, while metadiscourse markers such as "firstly," "however," and "in conclusion" signal transitions and relationships between points, making the material more accessible and interactive. This clarity and guidance not only improve understanding and retention but also model effective communication strategies that learners can apply in their own speaking and writing. Using the schematic structure and metadiscourse markers, a number of scholars have conducted studies on various contexts, such as political speeches, academic essays, and many more (El-Sakran, Nunn, & Adamson, 2019; Kuswoyo, Sujatna, Rido, & Indrayani, 2020; Lee & Subtirelu, 2015; Saragih, Batubara, & Khairina, 2021). However, little research has been done on the beauty pageant context. To fill this gap, the present study evaluates the answer to the beauty pageant final session using these frameworks.

In Rebecca's video learn more about the correct usage of "there is" and "there are" in English. These expressions can be confusing, especially when dealing with countable and uncountable nouns, collective nouns, and irregular nouns. The video provides a clear and comprehensive explanation of the rules governing these expressions, covering basic, intermediate, and advanced levels. By understanding these rules, I can improve my English grammar and avoid common mistakes in my writing and speaking. Overall, Rebecca's video is a valuable resource for anyone who wants to learn or improve their English grammar skills.

Previous studies have explored schematic structures and metadiscourses in various educational contexts, often focusing on written texts or broader instructional frameworks (Hyon, 1996; Eggins, 2004; Dafouz-Milne, 2008). These studies highlight how organized structures and metadiscourse strategies facilitate comprehension and engagement in educational content. However, this research is unique in its application to a specific medium, the educational video series "Video English with Rebecca," and its detailed analysis of how schematic structure and metadiscourse features specifically address the challenging grammatical points of "there is" and "there are." By examining this focused instructional segment, the study aims to assess how effective schematic structuring and metadiscourse can enhance understanding of these complex grammar points. The objective is to evaluate the video's effectiveness in clarifying these grammatical concepts and provide practical insights for designing educational content that addresses similar linguistic challenges effectively.

Theory and Method

Schematic structure theory, a cornerstone of this study, entails a systematic analysis of the organizational framework that shapes effective communication. It examines how information is arranged, interconnected, and sequenced within a discourse to create a coherent and compelling narrative. The concept of schematic structure examines how information in texts is structured (Hyon, 1996). Essentially, it refers to how genres are organized in a staged, step-by-step manner (Eggins, 2004) often following a predictable sequence of stages. Within the context of pageant winning answers, this approach examines how contestants strategically structure their responses, incorporating an introduction, body, and conclusion. Moreover, it explores the nuances of transitions, progression, and emphasis that guide the audience through a captivating narrative journey.

Coined by Zellig Harris in 1959, the term metadiscourse provides a framework for comprehending language in use, illustrating a writer's or speaker's efforts to shape a recipient's interpretation of a text. Subsequent developments by scholars such as Williams (1981), Kopple (1985), and Crismore & Farnsworth (1989) have expanded the concept, then the latest one (Dafouz-Milne, 2008). To define the meta discourse markers in the Beauty Pageant Winning Answer, the writer applies Dafouz-Milne's classification system for metadiscourse.

In this article use Qualitative Research based on Rebecca's video, "Learn about confusing English grammar there is or there are," could be used as a case study to illustrate various research methods, particularly qualitative research. Primary Data transcripts of Rebecca's video, including her explanations, examples, and interactions with viewers. Secondary Data online discussions or forums where people discuss the "there is/there are" confusion. The duration of the video is 14 minutes. This video was published in 2024, and with 156 million viewers. Data Collection observation analyzing the video to identify key points, teaching strategies, and viewer engagement. Identifying patterns and themes in how Rebecca explains the concept, the types of examples she

uses, and viewers' responses. Analyzing the language used in the video and viewer interactions to understand how the concept is communicated and understood.

Findings and Discussion

Schematic Structure

Structure	Explanation
Opening	The speaker introduces the topic, stating that the lesson will cover the correct usage of "there is" and "there are" in English. It addresses all levels of learners (basic, intermediate, and advanced). And brief mention that the lesson will cover different levels of difficulty.
Explanation of Concepts	In the explanation of Concepts the speaker explains there are 3 points that will be discussed such as basic, intermediate, and advanced. The speaker talks about different concepts between each other.
Practice and Application	The speaker offers a short quiz to reinforce the lesson and encourage practice. Encouragement: Viewers are encouraged to visit a website for a more comprehensive quiz and to subscribe to the YouTube channel for more lessons.
Closing	In the conclusion the speaker ends the lesson with a motivational message, wishing viewers success in mastering the English language. This structure effectively guides the learner from basic to advanced understanding of the use of "there is" and "there are," reinforcing the learning with examples and practice opportunities.

In the introduction, the speaker presents the lesson's focus on the correct usage of "there is" and "there are" in English, addressing learners at all levels: basic, intermediate, and advanced. The lesson is structured to cover these different levels of difficulty, ensuring that it caters to varying degrees of understanding. The explanation of concepts is divided into three parts: basic, intermediate, and advanced. In the basic section, the speaker defines "there is" and "there are," explaining that these expressions denote the existence of something. For singular countable nouns, "there is" is used with the article "a," while "there are" is applied to plural nouns, sometimes with quantifiers like "some" or "many."

In the intermediate section, the speaker clarifies that uncountable nouns, such as "equipment," "information," and "research," are always treated as singular and uses "there is" with these nouns. The discussion on irregular nouns covers cases that do not follow standard singular and plural rules. For advanced learners, the lesson introduces noun phrases and explains how the verb (is/are) is determined by the noun preceding the prepositional phrase, with examples like "there is a team of experts" and "there are major challenges." To reinforce learning, the speaker offers a quiz and encourages viewers to visit a website for more comprehensive quizzes and subscribe to the channel. The lesson concludes with a motivational message, guiding learners from basic to advanced understanding of "there is" and "there are" through examples and practice opportunities.

Metadiscourse Analysis

Metadiscourse analysis involves examining how language is used to organize and manage discourse, guiding the audience's interpretation and enhancing communication effectiveness. It focuses on the linguistic tools that speakers and writers use to structure their message, clarify, emphasize, or signal relationships between ideas. In this paper focus on grammatical cohesion and discourse markers.

Grammatical Cohesion

Word	Frequency	Sample
So	2	So , let's understand what they are
And	1	And that's where lots of mistakes occur
Because	1	We would say there are some computers, because computers we can count
But	1	But in English, equipment isa word
Total	5	

The table provides data on grammatical cohesion, specifically focusing on the use of conjunctions in a text, along with their frequency and examples of how they are used. Grammatical cohesion involves the use of grammatical devices to connect sentences and ideas, ensuring the text flows logically. Below is a detailed explanation of the data:

Grammatical Cohesion Overview

Grammatical cohesion is achieved through the use of various grammatical devices, including conjunctions, pronouns, and reference words. Conjunctions, in particular, are used to link clauses, sentences, or words, helping to create a smooth and coherent text.

Breakdown of Grammatical Grammatical Cohesion

The breakdown of conjunction usage reveals how different conjunctions function within the text. The word "So," appearing twice, is used as a conjunction to indicate a result or conclusion, as in "So, let's understand what they are," linking previous information to what follows and emphasizing the logical progression of ideas. "And," used once in "And that's where lots of mistakes occur," is a coordinating conjunction that adds information, maintaining the flow of the discussion by connecting ideas. Similarly, "Because," also used once in "We would say there are some computers, because computers we can count," is a subordinating conjunction introducing a reason, clarifying the cause-and-effect relationship. Lastly, "But," used once in "But in English, equipment is a word," introduces a contrast or exception, highlighting a specific distinction within the English language. These conjunctions collectively help in structuring the text cohesively, guiding the reader through logical transitions, additions, reasons, and contrasts.

Discourse Markers

Type	Word	Frequency	Sample
Clarification	Okay	1	There is a man waiting to see you in your office, okay?
	Next	1	Next , sometimes we have words which are plural with no S
Sequencing	Then	1	And then we have some really weird words in English like fish or sheep or deer
Emphasizing	Right	11	There are some people waiting for you in your office, right?
Total		14	

The table provides data on the use of grammatical discourse markers, which are words or phrases used to manage the flow and structure of discourse in a text. These markers help clarify, sequence, and emphasize ideas, making communication more effective.

Discourse Markers Overview

Discourse markers are linguistic tools used to organize speech or writing, signaling how different parts of the text are connected. They serve various functions such as clarifying, sequencing, or emphasizing information. The table categorizes these markers into three types: clarification, sequencing, and emphasizing.

Breakdown of Grammatical Discourse Markers

The text highlights the usage of various discourse markers and sequencing words in communication. "Okay" is used as a clarification tool, as seen in the sentence "There is a man waiting to see you in your office, okay?" It serves to seek confirmation and ensure the listener understands what has been said. "Next" and "Then" function as sequencing markers, helping to organize ideas and guide the listener through the logical progression of information. For example, "Next" appears in "Next, sometimes we have words which are plural with no S," signaling a transition to the following point, while "Then" in "And then we have some really weird words in English like fish or sheep or deer" indicates the next idea in the sequence. Lastly, "Right" is used for emphasis, as in "There are some people waiting for you in your office, right?" It is often employed to confirm the validity of a statement, emphasizing or reinforcing points made in the conversation.

Conclusion

The study on "Schematics Structure and Metadiscourse Analysis Feature of English with Rebecca" concludes that effective communication in English, especially in the context of teaching complex grammatical structures like "there is" and "there are," heavily relies on a well-organized schematic structure and the use of metadiscourse markers. By analyzing the instructional content of Rebecca's video series, the study highlights the importance of structured teaching methods and the strategic use of grammatical cohesion and discourse markers. These elements help learners better understand and apply English grammar, particularly in differentiating between countable and uncountable nouns, and in recognizing the importance of context in grammar usage. The research underscores that effective teaching strategies must incorporate these linguistic tools to enhance comprehension and retention among English language learners.

Abstract

In 2017, the content depicts individual stories around the challenges of living with mental illness, specifically anxiety and hopelessness. The content highlights the shame that surrounds mental health issues, comparing society's response to mental illness to that of physical illnesses such as cancer or broken bones. The speaker argues that mental illness should be treated with the same reality and sympathy as physical illness, emphasizing that individuals with mental health conditions do not choose to have them and essentially cannot "snap out of it." Speakers also offered individual experiences with treatment and the challenges of exploring mental illness in a society that often misjudges or underestimates it. She examines the importance of being kind and non-judgmental to others, as you never know what battles they may be facing within. The main message could be a call for sympathy and greater understanding of mental health issues. This paper used Fairclough theory to study the relation between language, power, and society. Fairclough's Critical Discourse Analysis framework is one of the popular frameworks in the study of discourse analysis.

Keyword: Mental Health Awareness, Social Practice, TED Talk

Introduction

"Mental health stigma is a significant barrier to seeking and engaging in mental health care, as it leads individuals to avoid treatment due to fears of being labeled or discriminated against" (Corrigan et al., 2014: p. 40). This phenomena sparks society as the speaker, Sam Cohen, addresses the stigma surrounding mental illness in society. She shared her personal experiences and observations about the judgements and misconceptions of the people with mental illnesses. Cohen emphasizes the importance of understanding and empathy, highlighting the disparity in how society treats physical illnesses versus mental illnesses. This topic is socially significant because sheds light on the huge issue of stigma against mental illness. Wahl argues that language has an important role in shaping public perception and awareness when people used to describe mental health issues (Wahl, 2018). By sharing personal stories and comparing the treatment of mental and physical illnesses, Cohen challenges social norms and calls for greater compassion and support for those suffering from mental health issues. This discussion is crucial for fostering a more inclusive and understanding society, where mental health is given the same respect and attention as physical health.

The phenomena of stigma in mental illness is interesting linguistically because Cohen tried to raise the awareness of the society about how people should change the way of how people see and treat other people with mental illness. As they should treat them the same way with people who have physical illness. Cohen, as the one who also suffers from mental illness made her deliver the speech that can move people or the audience. Stigma is particularly harmful to people with mental illness, as it reduces their willingness to seek help, their social isolation worse, and contributes to the continued marginalization of individuals with mental health conditions. Changing societal perceptions requires both public education and personalized narratives that encourage empathy and understanding, emphasizing that mental illness is not a choice but a reality" (Corrigan & Watson, 2002, p. 17).

This research is using the Critical Discourse Analysis (CDA) approach and qualitative method to studying language that focuses on the ways in which discourse in written or spoken communication could shape society as well as be shaped by power relations and social structures. "The CDA approach is crucial for analyzing how discourse both shapes and is shaped by the dynamics of power and social structures, providing insights into how language functions as a tool of social practice in contemporary societies" (Reisigl, 2017: 46).

There have been numerous studies on the use of Fairclough's Theory in examining media discourse. The written mode is represented by news articles, such as those analyzed by Prayudha and Fawwaz (2019), which studied the portrayal of Uyghur and China in American media through a critical discourse analysis of CNN news articles. This combination of modes allows for a comprehensive examination of how language functions across different media to shape public perceptions. There are three key articles in the CNN news archive covering the portrayal of Uyghur and China from January 1, 2018, to December 31, 2019. These articles were selected because they illustrate the significant role of media framing in influencing public perception of geopolitical issues.

Based on Fairclough's theory, it sees the discourse as a form of 'social practice' (Fairclough, 2013, p. 95), emphasizing the role of language in the construction and maintenance of social realities.

"In this study, the critical discourse analysis of CNN articles demonstrated how media framing contributed to shaping public perception of the Uyghur issue. The analysis highlighted that the portrayal of China as an oppressor is a result of ideological framing, which aligns with geopolitical interests" (Prayudha & Fawwaz, 2019, p. 149). Their research highlighted how media framing can influence public perception of geopolitical issues. Similarly, Briones (2017) conducted a demonstrative analysis of news articles using Fairclough's CDA framework, illustrating the practical application of CDA in understanding the underlying power dynamics and ideological underpinnings in news reporting. Additionally, Fairclough's CDA framework allows researchers to reveal the hidden power relations and ideological stances within media discourse. This study demonstrated how media outlets use language to perpetuate social inequalities by normalizing dominant ideologies through discourse" (Golbasi, 2017, p. 3). These studies collectively underscore the significance of CDA in media analysis but also highlight the need for further research to explore diverse media contexts and issues. Another study by Kim Jørgensen, (2022) explored health professionals' perceptions of user involvement in a mental health center using CDA. The objective of this study was to investigate the engagement between healthcare professionals and users of mental healthcare at the individual level in a mental health hospital.

This research paper focuses on analysis Sam Cohen Speech on TED Talks, titled The Stigma of Mental Illness. The reason for selecting this video is because Sam Cohen speaks about How society often underestimates or misunderstands people who suffer from mental illness such as anxiety and depression. The objective of this study is to analyze Sam Cohen's speech in TED Talk about Mental Illness Stigma using Fairclough's Critical Discourse Analysis (CDA). Aiming to investigate how Cohen employs linguistics and strategies to remove the stigma that has been spread in society about mental illness. Shahwan stated that using linguistics and strategic communication is important in reshaping societal attitudes towards mental illness. These strategies, coupled with public awareness campaigns and social contact interventions, contribute to reducing stigma by focusing on the individual rather than their condition and fostering empathy in public discourse (Shahwan et al., 2022). In this TED Talk, Cohen tried to frame and raise people's awareness by emphasizing her personal experiences and other people who suffered from mental illness to the audiences. This study examines the discourse structure by examining the text, discursive practice, and social practice in order to understand the themes and its linguistic features. Additionally, this study explores social practice about how the speech could reflect and contribute to social structure. **Research Question** How is mental illness stigma portrayed by Sam Cohen?

Theory

To apply CDA the researchers need to identify the text, contextual analysis, textual analysis, interpretive analysis, and critical reflection. Norman Fairclough's approach to

Critical Discourse Analysis (CDA) examines how language is used in various social contexts and how it relates to power, ideology, and social change. His work focuses on the idea that language is not neutral but reflects and reinforces social hierarchies, power relations, and ideologies. It is a significant contribution to the field and provides a structured way to analyze the interplay between language, power, and society. In Fairclough's CDA framework there are three-dimensional frameworks such as *Text*, *Discourse Practice*, *Sociocultural Practice*.

2.1 Text (Description)

In Fairclough's CDA, *text* plays a crucial role, more than just written or spoken words. It refers to any form of communication, including visual, multimodal, or spoken interactions. Texts are the outcome of discursive practices, which means that any form of language is used as a reflection of social structures and ideologies. Texts are shaped by the social conditions of their production and consumption. Text in to examine how language is used, including vocabulary, grammar, and rhetoric, discursive practice, social practice. For example, the speaker uses simple, relatable language and analogies that compare mental health struggles to physical health issues (e.g., broken bones, cancer, wheelchairs). This serves to highlight the unjust discrepancy between how physical and mental health conditions are perceived. Repetition of phrases like “you would never say” reinforces the message and creates a rhythm that emphasizes the societal double standard.

2.2 Discourse Practice (Interpretation)

Discourse practice refers to the processes that are involved in the production, distribution, and consumption of texts within specific social and cultural contexts. Discourse practice feeling the gap between *text* (the language used) and *social practice* (the broader societal structures and power dynamics). *Discourse practice* is a dimension that deals with the practices surrounding the text, including how texts are created, circulated, and interpreted. It examines the processes of text production,

text distribution, and text consumption. As the production, this text is part of a speech or talk (likely a TED talk), addressing a wide audience. The speaker uses a personal narrative to create an emotional connection, making it more than just a discussion of mental health but also a testimony to lived experiences.

2.3 Sociocultural Practice

Sociocultural practice is a dimension that considers the broader social and cultural contexts in which discourse occurs. It looks at how texts and discourse practices are shaped by and contribute to larger social structures, power relations, and cultural norms. It refers to the broader social, cultural, political, and economic contexts in which discourse operates. By examining sociocultural practices, Fairclough seeks to understand how language contributes to the reproduction of social structures or challenges them, particularly in terms of ideology, power, and dominance. In social context, this text reflects a larger sociocultural moment in which mental health awareness is growing, but stigma remains prevalent. While, in cultural and ideological context, the speaker challenges cultural ideologies that prioritize physical health over mental health. In many cultures, mental illness is still seen as a sign of weakness or a personal failing, which leads to social ostracism. Moreover, in power and ideology, this text plays a role in empowering people with mental health issues by giving them a voice. In doing so, they challenge dominant cultural ideologies that undermine mental health, and call for societal empathy and support.

Method

This paper uses qualitative research as the method. A method of inquiry that focuses on understanding phenomena from a holistic perspective, often exploring the meanings, experiences, and views of participants in a detailed and nuanced way. Creswell and Poth stated that qualitative involves emerging questions and procedures, data typically collected in the participant's setting, data analysis inductively building from particulars to general themes, and the researcher making interpretations of the meaning from the data (Creswell & Poth, 2018). Unlike quantitative research, which seeks to quantify variables and test hypotheses through numerical data, qualitative research is primarily concerned with gathering non-numerical data, such as interviews, observations, and textual analysis, to gain deeper insights into the subject matter.

The modes of communication analyzed include both spoken and written forms. Specifically, the spoken mode is exemplified by the TED Talk delivered by Cohen (2017) about raising awareness for those suffering from mental health issues.

By applying Fairclough's approach to the analysis of Cohen's (2017) TED Talk, the study uncovers how language is used as a form of social practice to impact societal attitudes towards mental health. Fairclough's framework, which draws from both linguistic and social theory, emphasizes the intrinsic connection between language and social practices, viewing discourse as a form of social action. His model of CDA focuses on examining how societal power relations are established, reinforced, or challenged through language use.

Findings and Discussion

This paper uses textual analysis using Fairclough's theory in analyzing this speech to understand how language is used as a tool to challenge social stigma related to mental illness. In this speech, the speaker explicitly attempts to deconstruct the view that mental illness is something that can be ignored or not taken seriously. Using Fairclough's theory, the analysis aims to identify how the speaker uses language to represent power, ideology, and social relations in this context.

Fairclough's theory emphasizes that language is never neutral; it always reflects and shapes social structures. In the context of this speech, the speaker attempts to change social perceptions of mental illness by using powerful and emotional language to express personal experiences and highlight injustices in the way society deals with this issue.

Textual analysis with Fairclough's theory allows us to see how the speaker articulates a critique of the dominant view that trivializes mental illness, as well as how she tries to build a more inclusive and empathic argument.

Textual analysis

Table 1.1 Exclusive and Inclusive

Frequency of Inclusion and Exclusion Pronoun			
Inclusion	Frequency	Exclusion	Frequency
Us	3	They	4
I	25	Their	9
Me	4	He	1
		She	13
		You	15
Total	31	Total	42

Inclusive pronouns include "I," "my," "me," "we," "our," and "us." These pronouns are used to create a sense of unity between the speaker and the audience. They help to build a collective identity and foster a shared understanding of the topic.

- "TED is all about ideas we're sharing any idea."
- "I want to share with you all today..."
- "Trust me, if I could snap out of my anxiety and my depression I would have done it long before anybody had to tell me..."

Analysis: The speaker uses inclusive pronouns to align themselves with the audience, promoting empathy and collective responsibility. The use of "we" and "our" bridges the gap between the speaker and the listeners, making the discussion about mental health a shared concern rather than an isolated issue.

Exclusive pronouns include "you," "you're," "they," and "their." These pronouns emphasize individuality and can draw distinctions between the speaker and the audience or between different groups within the speech.

- "You can't look at me and tell me that I've been diagnosed with anxiety and depression."
- "So just be nicer and make sure if you know someone with a mental illness that they know you're not judging them because of their mental illness."

Analysis: The speaker uses exclusive pronouns to personalize the narrative, highlighting their own experiences with mental health issues. This usage emphasizes the unique challenges the speaker faces and underlines the personal nature of their struggle. The contrast between "I" and "you" in the speech also serves to challenge the audience's potential misconceptions about mental illness

Discourse Analysis

In Fairclough's Critical Discourse Analysis (CDA), the concept of *discourse practice* refers to how texts are produced and consumed, revealing underlying social structures and ideologies. In this text, the speaker challenges societal stigmas surrounding mental illness through several key discourse practices.

1. *Production of the Text:*

The speaker creates a personal narrative to raise the awareness of the issue of mental illness. By sharing their own experiences with anxiety and depression, they build credibility and empathy with the audience. This approach aligns with Fairclough's idea of how texts reflect the social identities of individuals within particular discursive contexts. The choice to include anecdotes about therapy and family members also serves to position the speaker as a relatable, everyday

person navigating mental illness, emphasizing shared human experience.

2. *Intertextuality and Social Values:*

The speaker draws on cultural references and everyday sayings to emphasize the stigma around mental illness. The repeated phrases like “you would never say” to people with physical illnesses (“broken bones,” “cancer,” or “wheelchairs”) are used as intertextual examples. This reflects societal norms where physical illness is treated with empathy, while mental illness is often dismissed or invalidated. By contrasting how physical and mental illnesses are perceived, the speaker highlights social injustice and challenges these discriminatory views, suggesting that language and societal norms need to change.

3. *Consumption of the Text:*

The audience is encouraged to consume the message through an emotional and ethical lens. By using a conversational tone and accessible language to the audience, the speaker fosters a sense of shared responsibility and compassion. They address the societal habit of trivializing mental health issues, such as casual use of terms like “OCD” or “retarded,” and directly ask the audience to be more mindful and respectful. This would be a call to action, inviting listeners to reflect on their own language use and attitudes toward mental illness.

In summary, the *discourse practice* in this text reflects both how societal norms around mental illness are produced and how they are resisted. The speaker uses personal experience, relatable examples, and a conversational tone to challenge existing stigmas and prompt the audience to reconsider their perceptions and language related to mental health.

Sociocultural Practice

In Fairclough's CDA, *sociocultural practice* refers to the broader social, cultural, and institutional contexts that influence the production and consumption of a text. The analysis of sociocultural practice in this text reveals several important societal issues surrounding mental health:

1. *Stigma and Social Norms:*

The text discusses how mental health conditions are stigmatized in society, which reflects broader cultural values that prioritize physical health over mental health. The speaker highlights that people with physical illnesses (like broken bones or cancer) receive empathy, while those with mental illnesses (like anxiety or depression) are often dismissed or disbelieved. This reflects a deeply

ingrained societal bias that equates visibility with validity, where mental illnesses are stigmatized because they are not outwardly visible.

2. *Cultural Stereotypes:*

The reference to the portrayal of mental hospitals in movies as “dark” and “torture chambers” reflects how media shapes public perceptions of mental illness. These portrayals contribute to the negative stereotypes that people associate with mental health treatment, reinforcing the idea that those who seek help are somehow “dangerous” or “uncontrollable.” This perpetuates fear and misunderstanding about mental health care, discouraging individuals from seeking help due to societal judgment.

3. *Medical and Institutional Context:*

The speaker's account of a relative receiving treatment in a mental health facility shows the intersection of mental health with medical institutions. It illustrates the disparity in how mental health care is perceived by society compared to general healthcare.

4. *Language and Mental Health:*

The text also critiques everyday language that trivializes mental health, such as saying “I’m OCD” or using terms like “retarded” or “depressed” inappropriately. This reflects a broader cultural issue where serious mental health conditions are often reduced to casual expressions, undermining the severity of these illnesses. This linguistic practice diminishes the reality of mental health struggles, reflecting a lack of sensitivity in cultural discourse.

5. *Self-Disclosure:*

The speaker's discussion of therapy, both personal and societal, reflects a growing cultural trend toward the normalization of mental health discussions. While the speaker describes positive personal experiences with therapy, they also highlight how societal stigmas surrounding therapy still persist. This tension mirrors larger cultural shifts where mental health advocacy is becoming more visible, yet societal attitudes remain resistant in some areas.

6. *Mental Health and Family:*

The speaker's mention of mental health running in families and how genetics or trauma contribute to anxiety and depression reflects the increasing recognition of mental health as a complex, multifaceted issue within public discourse. This aligns with sociocultural shifts toward understanding mental health through both biological and environmental lenses, acknowledging mental illness as an involuntary condition rather than a personal failing.

In conclusion, the sociocultural practice in this text reflects the societal struggle to reconcile mental illness with cultural norms that prioritize physical health, perpetuate stigmatizing stereotypes, and trivialize mental health issues through language. The text critiques these societal attitudes and advocates for greater compassion and understanding for those suffering from mental illnesses, calling for a cultural shift toward acceptance and support.

No.	Words	Word Count	Sample of the Text
1.	Depression	9	"Trust me, if I could snap out of my anxiety and my <u>depression</u> I would have done it long before anybody had to tell me my illness isn't physically visible to you."
2.	Mental illness	4	"Unfortunately, society hasn't just stigmatized therapy but it's also stigmatized <u>mental illness</u> ."
3.	Society	4	"My relative was lucky to get the treatment that she got in our <u>society</u> , our <u>society</u> is very judgmental when it comes to mentally sick."
4.	Trauma	1	"Many people have it because of a childhood <u>trauma</u> or just it runs through genetics, he runs to my family."
5.	Physical	1	"Trust me, if I could snap out of my anxiety and my depression I would have done it long before anybody had to tell me my illness isn't <u>physically visible</u> to you."

In Fairclough's CDA framework, the sociocultural practice analysis situates the discourse within broader social, historical, and cultural contexts. This text heavily emphasizes mental illness, as seen from the frequent use of "depression" and "mental illness" suggests that mental health is a central theme, and the discourse challenges the cultural misunderstanding and stereotypes surrounding these issues. This also portrays a significant focus on societal issues regarding mental health. The speaker highlights the stigma surrounding mental health and compares it to physical ailments, pointing out the contrasting societal attitudes towards visible and invisible illnesses.

The recurrence of the term "society" six times in the text illustrates a critique of how mental health is perceived and treated on a societal level. The use of "society" emphasizes the issues related to mental health stigmatization, revealing a broader social practice where mental illness is judged and misunderstood. This reflects the dominant social ideologies around mental health, which often lead to ostracization of individuals who struggle with conditions like anxiety and depression.

The absence of the word "social" suggests that the discourse focuses more on the broader societal framework rather than on individual social interactions. The speaker challenges the normative societal attitudes towards mental health, calling for a shift in how society deals with invisible illnesses like anxiety and depression.

Moreover, the lack of the term "physical" underscores the point that mental illness, unlike physical illness, often goes unrecognized or is doubted, reflecting a societal bias towards visible conditions. By using these specific terms, the text engages with societal discourses on mental health, pushing against the marginalization and promoting empathy and understanding.

The text also addresses cultural practices of belittling mental health issues through casual language, such as using "OCD" or "depression" inappropriately, which reflects deeper cultural stigmatization. The speaker advocates for changing these sociocultural practices to promote inclusivity and acceptance for those suffering from mental health conditions.

Conclusion

The textual analysis of the speech using Fairclough's Critical Discourse Analysis (CDA) reveals how language is employed to challenge the stigmatization of mental illness in society. In the TED Talk 'Stigma of Mental Illness' by Sam Cohen discusses how common people perceive mental illness and people who suffer from that only as a trivial matter. The conclusion underscores the need for empathy and understanding for people with mental illness. She addresses the common societal misunderstandings and stigma surrounding mental health issues and emphasizes the importance of being more compassionate and supportive. Cohen critiqued the dominant societal norms that trivialize mental health conditions. The analysis highlights how societal structures influence the way mental illness is perceived, often leading to judgment and misunderstanding when compared to physical illnesses. She calls for a shift away from trivializing mental illness and encourages genuine openness about personal struggles. The speaker's discourse pushes for a cultural shift toward greater compassion, advocating for a deeper recognition and acceptance of mental health issues as part of broader socio-cultural practices. Through this critique, the text emphasizes the need for society to move beyond the stigmatization of mental illness, calling for a more inclusive and supportive approach. Their ultimate message is to foster a more inclusive and supportive community for everyone.

Interactive Metadiscourse Markers in Malaysian University Students' Three-Minute Thesis Presentation (3MT)

Devi Ratnawati¹, Heri Kuswoyo²

ratnawatidevi54@gmail.com¹, hery@teknokrat.ac.id²

English Department, Faculty of Arts and Education, Universitas Teknokrat Indonesia

Abstract

This study examines the use of interactive metadiscourse markers in the Three Minute Thesis Presentation (3MT) by Malaysian university students. Interactive metadiscourse markers are crucial in organizing discourse, guiding audience understanding, and enhancing the effectiveness of communication within the stringent time constraints of the 3MT format. By analyzing a selection of 3MT presentations, this research identifies and quantifies the usage of various interactive markers, including transitions, frame markers, and code glosses. The findings highlight the categorization of Interactive metadiscourse and how they were manifested. The study also explores how these markers contribute to the overall persuasiveness and clarity of the presentations, providing insights into the communication strategies that support successful public engagement with complex research topics. The implications of these findings are significant for both educators and students, particularly in the context of training graduate students to effectively communicate their research to diverse audiences in competitive and public speaking settings.

Keywords: *Interactive metadiscourse markers, Three Minute Thesis (3MT), academic presentations, Malaysian university students, discourse analysis, public speaking.*

Introduction

Academic institutions globally have recently emphasized the importance of strong communication skills for students, particularly at the postgraduate level. One program that underscores this need is the Three Minute Thesis (3MT) competition, which challenges postgraduate students to condense and present their research in just three minutes using a single static slide, without additional media or props (Hu & Liu, 2018). To succeed, participants must convey their findings clearly and engagingly to a non-specialist audience, requiring a well-structured narrative, effective use of the single slide, and extensive practice (Rowe, 2017). Participating in the 3MT competition offers several benefits, including improved communication skills, networking opportunities, professional development, and greater exposure and recognition for their research (Wilkinson & Fung, 2019).

Since its inception at the University of Queensland in 2008, the 3MT competition has been adopted by numerous universities worldwide, including Universiti Teknologi Malaysia (UTM). At UTM, the competition aims to enhance postgraduate students' communication abilities in presenting their research findings clearly and concisely within the three-minute time frame. This involves distilling complex research into an engaging presentation that is accessible to a general audience (Kumar & Vijay, 2020). The success of a 3MT presentation depends not only on content but also on delivery, requiring the strategic use of metadiscourse markers to guide the audience's understanding.

In contemporary linguistics, discourse analysis explores how language functions beyond sentence structure to organize texts and construct meaning through various linguistic strategies (Pradana & Suprayogi, 2021). Metadiscourse, a key concept in this field, refers to how speakers and writers use language to comment on their own texts, shaping how their messages are received and understood. It can be divided into two main types: interpersonal and interactive. Interpersonal metadiscourse engages the audience, reflecting the speaker's attitude and relationship with them, while interactive metadiscourse helps structure the text and guide the audience through it, enhancing coherence and clarity (Hyland, 2005).

Interactive metadiscourse markers are crucial in 3MT presentations as they help organize speech, highlight key points, and establish a connection with the audience. Despite the increasing popularity of the 3MT competition, there has been limited research on the use of interactive metadiscourse markers in these presentations, particularly in the Malaysian context (Chong & Mohamed, 2021). This study aims to fill this gap by examining the types and manifestations of interactive meta-discourse markers used by Malaysian university students in their 3MT presentations.

Theory and Method

Several researchers have conducted studies on metadiscourse analysis. Hamid (2018)

examined English postgraduate theses in Indonesia, focusing on the findings and discussion sections. According to Kathpalia (2024), from Singapore, it explored the rhetorical structure and linguistic aspects of Three Minute Thesis (3MT) presentations. Her research found that PhD students employed strategies of simplification and engagement to communicate their research effectively to a non-specialist audience. Simplification was achieved by removing complex elements and defining scientific terms, while engagement was enhanced through various strategies to maintain the structure of the presentation. Ädel (2023), from Sweden, proposed a new taxonomy for metadiscourse in spoken presentations, shifting the focus from identifying linguistic markers to understanding the functional roles of broader discourse units. This approach helps students structure their presentations more effectively by highlighting the rhetorical functions of metadiscourse. Collectively, these studies underscore the vital role of metadiscourse in spoken presentations.

Metadiscourse

The author uses metadiscourse as a set of language tools to interact with their audience, shape how their messages are understood, and organize the flow of their discourse (Hyland, 2005). Metadiscourse is crucial in communication as it connects the speaker or writer with their audience, clarifies content interpretation, and conveys viewpoints and attitudes.

Metadiscourse is divided into two main types: Interactive and Interpersonal. *Interactive metadiscourse* guides the reader or listener through the content, while *interpersonal metadiscourse* focuses on the relationship between the author or speaker and the audience. This study focuses on interactive metadiscourse with Hyland as a theoretical framework, which includes frame markers, transitions, endophoric markers, evidentials, and code glosses, each playing a specific role in helping the audience navigate and understand the text or speech. Effective use of these markers improves communication by making it more structured, engaging, and clear (Hyland, 2005).

Table 1. Categorization of Interactive Metadiscourse Markers

	Category	Function	Examples
No	Interactive Metadiscourse	Help to guide the reader through the text	Resources
1.	Frame Markers	Refer to discourse acts, sequences of stages	Finally; to conclude; my purpose is
2.	Transitions	Express relations between main clauses refer to discourse acts, sequences, or stages	In addition; but ; thus; and

3.	Endhoporic Markers	Refer to information from other parts of the texts	Noted above; see Fig; in section 2
4.	Evidentials	Refer to information from other texts	According to X; Z states
5.	Code Glosess	Elaborate propositional meanings	namely : e.g; such as; in other words

Frame Marker

Frame markers are linguistic cues used to structure and guide the reader through the discourse. They indicate the layout, sequence, and key points, making the content easier to follow. For example, phrases like "In this section," "Firstly," "Finally," and "To summarize" signal organization and highlight significant information in the text (Hyland, 2005).

Transition

Transitions in metadiscourse are words or phrases that link ideas, sentences, and paragraphs, ensuring smooth flow and coherence. Examples include "furthermore," "however," and "therefore." They help guide readers by connecting arguments and clarifying relationships between ideas (Hyland, 2005).

Endophoric Markers

Endophoric markers refer to something within the same text, creating cohesion. Anaphoric references point back, like "he" referring to "John" in "John went to the store. He bought milk." Cataphoric references point forward, like "she" referring to "Mary" in "When she arrived, Mary was surprised" (Halliday & Hasan, 1976).

Evidential

Evidential markers indicate the source of information in a statement, such as direct experience, inference, or reported evidence. For instance, "I saw her leave" (direct), "She must have left" (inference), and "She said she would leave" (reported). These markers help the audience assess the credibility of the information (Aikhenvald, 2004).

Code Glosses

Code glosses are linguistic strategies used to clarify or elaborate on a point. They make complex information more accessible. An example is "i.e." in "The experiment focused on renewable energy sources, i.e., solar and wind energy," where "i.e." clarifies the types of sources referred to (Hyland, 2007).

Methodology

According to Rido (2015), qualitative research is subjective and humanistic as it deals with meanings, emphasizing the depth and context of human experiences. This contrasts with quantitative research, which focuses on numerical data and statistical analysis. Common data collection methods in qualitative research include interviews, observations, and text analysis.

In this study, the data source was obtained from a YouTube video of a Three Minute Thesis (3MT) presentation titled “MEAT CSI: Detecting Culprit Species in Meat Products” delivered by Siti Aimi Sarah Zainal Abidin from Universiti Putra Malaysia (<https://www.youtube.com/watch?v=nqchpRM77No>). The Author transcribed the presentation as the primary data source, enabling a detailed analysis of the interactive metadiscourse markers used throughout the presentation.

Findings and Discussion

This study examines the use of interactive metadiscourse markers in 3MT presentations by Malaysian university students, focusing on Siti Aimi Sarah Zainal Abidin’s presentation. Using Hyland's (2005) framework, it categorizes these markers, showing how they enhance coherence and engage the audience.

Table 2. The percentage of Interactive Metadiscourse

Category	Number of Terms	Percentage of total interactive metadiscourse
Transition	1	16.67%
Frame Markers	1	16.67%
Endophoric Markers	2	33.33%
Evidential	0	0
Code Glosses	2	33.33%
Total	6	100%

In a 3MT presentation, a Malaysian student analyzes interactive metadiscourse markers to show how they enhance audience engagement and communication. The use of endophoric markers and code glosses ensures clarity and coherence, even in a brief format. This study underscores the value of strategic metadiscourse for delivering effective academic presentations.

Frame Markers

Frame markers like ‘firstly’ and ‘to conclude’ help structure a presentation by signaling the order and flow of ideas. They guide the audience through different stages, ensuring clarity and coherence. For example, in Excerpt 1, the marker "let me share with you a fact" introduces specific information, signaling a transition from general to detailed discussion.

Transitions

Transition markers such as ‘and’ connect ideas and ensure smooth flow. They help the audience follow the argument or shifts in focus. In Excerpt 3, the marker "and" links two related thoughts, guiding the audience through the narrative.

Endophoric Markers

Endophoric markers like "this" and "these" refer back to previously mentioned ideas, maintaining coherence. In Excerpt 8, "this is" refers to earlier points about meat adulteration detection, emphasizing its relevance to specific groups.

Code Glosses

Code glosses such as "for example" and "namely" clarify terms or concepts by providing definitions or examples. In Excerpt 9, "for example" introduces specific instances to illustrate the broader issue of food adulteration, making it more relatable and easier to understand.

Conclusion

This study examined how Interactive metadiscourse markers, such as frame markers, transitions, endophoric markers, and code glosses, enhance clarity and engagement in 3MT presentations by Malaysian university students. These markers help presenters organize ideas, guide the audience, and simplify complex concepts. Frame markers structure the presentation, while transitions link ideas smoothly. Endophoric markers refer back to earlier points for coherence, and code glosses clarify difficult terms for non-specialist audiences. Together, these tools help ensure concise, clear communication within the 3MT’s time constraints.

Gender Roles in Pop Song Lyrics: A Sociolinguistic Analysis of Stereotypes and Language Change

Silvia Damayanti Puspaningrum¹

silvia_damayanti_puspaningrum@mhs.teknokrat.ac.id¹

Universitas Teknokrat Indonesia¹

Abstract

This study contributes to understanding how political rhetoric shapes public opinion, social narratives, and power dynamics, particularly in polarized contexts, and demonstrates how language can construct political realities and influence national discourse. This study analyzes gender roles in modern pop song lyrics through a sociolinguistic lens, highlighting the impact of musicians like Olivia Rodrigo and The Weeknd. This study attempts to fill the knowledge gap by closely examining "Deja Vu" and "Blinding Lights," in light of the paucity of research on gender representations in pop music. The analysis provides detailed insights into the changing gender depictions in popular music by focusing on linguistic tactics and potential gender preconceptions. This research emphasizes the significance of specific songs and artists in influencing society's ideas on gender, in contrast to other studies that frequently generalize patterns. The study provides a unique focus on the pop genre while being consistent with previous studies on "Gender in song lyrics".

Keyword: *Contemporary music, gender roles, linguistic strategies, Olivia Rodrigo, pop music, popular song lyrics, sociolinguistic analysis, societal dynamics, The Weeknd, gender stereotypes.*

Introduction

As an artistic medium that permeates modern culture, popular music can both reflect and alter societal dynamics, including gender roles. Artists typically express themselves with a variety of voices when they sing, which is a very dynamic and inventive form of communication. Today, pop music circulates across national boundaries, and English is the main medium of communication in transnational pop culture (Jansen & Westphal, 2017). When examining gender portrayal in the context of song lyrics, song lyrics present an intriguing area for artistic interpretation. Language within popular culture, and thus popular music, is a source of learning and imitation, arguably more so than the mandatory school subject (Eiter, 2017). Gender roles play a significant role in shaping societal norms and expectations. Throughout history, gender ideologies have influenced various aspects of life, including language and cultural beliefs (Jungeun, 2021). The evolution of gender roles in pop song lyrics reflects broader societal changes in attitudes towards gender and identity (Smiler et al., 2017)

The Connection between language and society, language and culture presupposes skills not only of the language code but also of the sociolinguistic knowledge and cultural norms of the given linguistic community, including gender characteristics, manifested in the speech behavior of men and women (Kenetova et al., 2022). The purpose of this study is to improve our knowledge of how popular song lyrics construct stories about gender roles and how much of an impact they have on societal norms and views. This study will examine two highly popular pop songs, "Deja Vu" by Olivia Rodrigo and "Blinding Lights" by The Weeknd. It will also look at how the two vocalists utilize language differently and represent gender differently. A speaker is influenced by the performance requirements of the audience, which is why societal conventions shape how men and women speak with one another and their peers (Gallee, 2016). The linguistic study will concentrate on locating any potential gender stereotypes in the lyrics and looking for trends in how gender roles are portrayed throughout multiple pieces by each artist.

Although a great deal of study has been done on the sociolinguistic aspects of music, there is still a significant research vacuum when it comes to a thorough analysis of how gender roles are portrayed in the lyrics of certain modern songs and how these representations may change over time. Research that already exists frequently concentrates on broad trends or certain genres, ignoring the depth to which individual songs and performers contribute to the larger conversation. Moreover, there is a limited grasp of the linguistic tactics used by artists to express gender-related concerns due to the limited examination of gender dynamics in songs by musicians from varied gender backgrounds.

By performing a thorough sociolinguistic analysis of the songs "Deja Vu" and "Blinding Lights," this study aims to close these gaps by offering a nuanced examination of gender representations in the lyrical content of these songs. With a focus on the music of Olivia Rodrigo and The Weeknd, two well-known figures in the music business, this study seeks to provide important new understandings of how gender representations in modern popular music are changing. In addition to examining the language choices made in the lyrics, the analysis will look for any changes or patterns in the way gender roles are portrayed. This will give rise to a more nuanced understanding of the ways in which popular music continues to influence and mirror societal views on gender.

In connection with research that examines "Gender in song lyrics", such as: First Marina Hernández Vegas (2015) entitled " Gender and Language: a Sociolinguistic Approach to Rock Music from the 1970s and 1980s". Second, "Are Love Songs Lyrically Gendered? A Content Analysis of Gender-Specific Speech Features in Song Lyrics" (2016) was conducted by Jeanne Gallée. Next Cenate Pruitt also (2006) conducted the same topic with the title "Stand by your man, redneck woman: Towards a historical view of country music gender roles". Another research with the same topic is "Tell 'em you're nothin' without a woman, no" Gender and language in rap music: a corpus-based analysis of gender-related language construction among female musicians", done by Grabner (2022). Although all of these studies focus on the relationship between gender and language in the context of music, each study has a unique approach and different types of music. For example, Hernández Vegas and Pruitt focus on specific genres of music (rock and country), while Gallée focuses on love song lyrics in general, and Grabner focuses on rap song lyrics from a gender perspective. Since the four previously stated studies haven't particularly focused their research on the pop music genre, doing this research is quite important. In addition, they demonstrate a particular focus on analyzing stereotypes and linguistic evolution, with a tendency toward a comprehensive analysis of pop song lyrics generally.

Theory and Method

For the purpose of achieving a deeper knowledge of gender roles in popular song lyrics, this research employs a qualitative descriptive method along with a sociolinguistic approach. A qualitative descriptive approach was employed to gather comprehensive, meaningful data. The meaning communicates precise, accurate facts that lie underneath the apparent information (Sugiyono, 2015). This methodology is particularly well-suited for exploring how language is used to construct and perpetuate gender stereotypes in pop song lyrics, as well as understanding the evolving nature of gender roles within the context of popular music (Satyan, 2020). This study will investigate how lyrics' language both reflects and modifies societal gender standards using a sociolinguistic method. To comprehend how language in lyrics can establish, reinforce, or challenge gender preconceptions, the analysis will concentrate on linguistic variances, such as word choice, phrasing, and sentence structure.

This study will provide a detailed account of the analysis's findings using descriptive qualitative approaches. This study attempts to pinpoint variations and trends in how

gender roles are portrayed by characterizing the linguistic variety found in song lyrics. In addition, the qualitative methodology will enable the study to elucidate the social, cultural, and musical backgrounds of every song, offering a comprehensive and contextualized view of the ways in which gender representation appears in popular music compositions. The primary aim of this study is to employ qualitative interpretation techniques to offer a comprehensive comprehension of how music lyrics impact the societal construction and perception of gender identity. This research tries to analyze how song lyrics shape and reflect social reality in connection with the concept of gender by presenting the analytical findings in a detailed and complex narrative. This research is anticipated to meaningfully contribute to our understanding of the complexity of language and meaning in pop song lyrics connected to gender roles by integrating the sociolinguistic approach and descriptive qualitative method. The data was taken from 2 pop songs entitled "Deja Vu" (2021) by Olivia Rodrigo and "Blinding Lights" (2020) by The Weeknd. Both songs were chosen because they fulfill the criteria for further investigation. Moreover, the researcher methodically carried out the following steps in order to gather pertinent data for the study: 1) **Song Collection**: 50 songs were hand-picked to offer a broad perspective on gender representation, each representing a different facet of the modern music industry; 2) **Ranking**: The songs were ordered by popularity over the last 3 years, as determined by popular indices and current chart data from major music platforms; 3) **Diversification**: The focus was on choosing songs from a variety of genres, with male and female vocalists, and addressing a range of lyrical themes (love, everyday life, societal challenges); 4) **Lyrics Evaluation**: The lyrics were subjected to a critical analysis in order to determine their eligibility for sociolinguistic study and their capacity to disclose gender-related stereotypes or role changes; and 5) **Comprehensive Analysis**: Taking into consideration their significance to the study goals, two songs were chosen for a more thorough analysis out of the original 50.

Findings and Discussion

This section presents the findings and discussions obtained through the sociolinguistic research on pop music lyrics. Researchers investigate the changing dynamics of gender roles, stereotypes, and language use via the perspectives of both male and female artists. From power shifts to emotional expressiveness, each lyric serves as a language prism through which individuals can study complex portrayals that challenge traditional conventions. This investigation seeks to decipher not just the lyrics themselves, but also the societal developments represented in the ever-changing vocabulary of modern music.

After conducting a comprehensive analysis of the gender roles in pop song lyrics, it was evident that the lyrics often reinforce traditional gender norms and stereotypes. Masculinity was frequently depicted as dominant, assertive, and independent, while femininity was portrayed as nurturing, emotional, and dependent (Hyden & McCandless, 1983). The portrayal of relationships in the lyrics often emphasized power dynamics, with men taking on the role of the provider and women being depicted as passive recipients of affection (Blair & Hyatt, 1997).

1. Gendered Narratives in Pop Song Lyrics

Lyric 1 (Woman Singer)

*"Car rides to Malibu
Strawberry ice cream
One spoon for two
And trading jackets
Laughing 'bout how small it looks on you"*

The lyrics sung by a female performer depict an intimate and shared event, emphasizing traditionally feminine imagery such as sharing ice cream and trading outerwear. This reinforces stereotypes of women being connected with caregiving and communal activities. The lyrics also mention watching TV shows and singing in harmony, which represent a sense of emotional closeness commonly associated with female relationships. The remark of "small jackets" can be read as a fun and shared proximity, which contributes to stereotypes of women in partnerships.

Lyric 2 (Man Singer)

*"I've been tryna call
I've been on my own for long enough
Maybe you can show me how to love, maybe"*

In contrast, lyrics written by a male artist express vulnerability and a readiness to seek instruction in matters of love. The story illustrates a shift away from traditional gender stereotypes, in which men are frequently presented as emotionally distant or self-sufficient. The vocalist conveys a desire for connection and instruction, challenging the assumption that men are always self-assured in matters of love. This reflects a shift in contemporary music discourse, with male performers displaying more emotional depth and a willingness to be vulnerable.

Analyzing both sets of lyrics reveals that gender roles in pop music lyrics are changing. The female artist's songs highlight shared, private moments that have historically been associated with femininity, whereas the male artist breaks conventions by expressing vulnerability and a yearning for emotional connection. This shift in portrayal may indicate a cultural movement toward breaking down traditional gender standards and adopting a more fluid perspective of relationships. Language in pop songs is emerging as a tool for artists to challenge and redefine traditional gender norms, contributing to a larger sociolinguistic landscape of changing gender narratives in current music.

2. Representation of Relationships in Pop Song Lyrics

Lyric 1 (Woman Singer)

*"Do you get déjà vu when she's with you?
Do you get déjà vu? (Ah), hmm
Do you get déjà vu, huh?
Do you call her
Almost say my name?"*

The female artist's lyrics explore the concept of *déjà vu* in the setting of a previous relationship. The story implies a reflection on shared memories and experiences with a former partner who has moved on to a new relationship. The lyrics express possessiveness and nostalgia, challenging the notion that women should easily let go of previous relationships. The comment of wanting to be remembered for comparable experiences in the new relationship undermines traditional notions of women smoothly transitioning.

Lyric 2 (Man Singer)

*"I said, ooh, I'm blinded by the lights
No, I can't sleep until I feel your touch
I said, ooh, I'm drowning in the night
Oh, when I'm like this, you're the one I trust"*

The male artist's songs focus on sensory experiences, specifically being "blinded by the lights" and craving physical touch for solace. The story depicts a need for connection and trust in a single individual. This calls into question the traditional representation of men as emotionally detached, implying a move toward more emotionally expressive male characters in pop lyrics. The dependence on sensory cues to transmit emotions represents a shift from traditional gender norms.

Examining both sets of songs, Researchers see a common thread of emotional depth and vulnerability, breaking established gender standards. The female artist challenges notions of emotional separation by expressing possessiveness and nostalgia, whereas the male artist emphasizes the need of physical touch and emotional trust. Both stories contribute to a larger sociolinguistic change in which pop song lyrics deviate from traditional gender stereotypes and depict more complicated and emotionally expressive individuals in relationships. The lyrics are a linguistic reflection of shifting contemporary attitudes and expectations about love and connection.

3. Power Dynamics in Relationship Representation

Lyric 1 (Woman Singer)

*"She thinks it's special
But it's all reused
That was our place, I found it first
I made the jokes you tell to her when she's with you"*

The female artist's lyrics reflect a power dynamic in the representation of past relationships. The argument that the current partner believes the experiences are new while the singer sees them as rehearsed suggests a sense of control and power over the narrative. The claim of discovering a shared location first and determining the humor in the new relationship calls into question established gender roles, which portray women as submissive or dependent.

Lyric 2 (Man Singer)

*"I'm just calling back to let you know (Back to let you know)
I could never say it on the phone (Say it on the phone)
Will never let you go this time (Ooh)"*

The male artist's lyrics include an emphatic proclamation of not letting go, challenging the stereotype of men as emotionally disconnected or avoidant. The act of calling back and refusing to express emotions on the phone might be interpreted as a strategic assertion of control over the timing and mode of communication. This representation violates traditional gender standards, which suggest that men should avoid direct emotional expressions.

Both sets of songs reveal power dynamics in relationships. The female artist takes charge of shared memories and humor, challenging the notion of women as passive participants in relationships. In contrast, the male artist aggressively expresses his intention to cling on, defying the notion of men avoiding emotional commitment. These tales represent a shifting sociolinguistic environment in pop songs, with power relations shown as more flexible and less bound by traditional gender norms.

4. Evolving Emotional Expressiveness

Lyric 1 (Woman Singer)

*"Singing in harmony
I bet she's bragging
To all her friends, saying you're so unique, hmm"*

The female artist's lyrics include a reference of singing in harmony, which represents emotional connection. The insinuation that the present partner brags about the male

character's peculiarity calls into question established gender norms. It depicts the woman as aggressive and confident, taking delight in her control over the male character's identity.

Lyric 2 (Man Singer)

*"I said, ooh, I'm blinded by the lights
No, I can't sleep until I feel your touch"*

The male artist's songs show emotional vulnerability by emphasizing a bodily need for touch. This contradicts typical depictions of males as austere and emotionally detached. The utilization of sensory sensations, such as being dazzled by lights and requiring contact, reflects a move toward more emotionally expressive male characters in pop songs.

Both sets of lyrics contribute to the growth of emotional expressiveness in pop music narratives. The female artist claims emotional control, whereas the male artist freely shows a need for physical contact. This contradicts gender stereotypes by showing a more complex and emotionally expressive portrayal of both men and women in relationships.

These findings suggest that popular music lyrics continue to perpetuate and promote traditional gender roles, despite some efforts to challenge these representations (Kreyer, 2015). Moreover, the analysis revealed that pop song lyrics tended to perpetuate specific gender stereotypes, such as associating men with strength and women with vulnerability. These findings underscore the influential role of language in perpetuating and reinforcing societal expectations of gender.

Conclusion

In this sociolinguistic study on gender roles in pop song lyrics, researcher analysis revealed a complex tapestry of changing narratives that challenge established preconceptions and show variations in language use. The juxtaposition of lyrics by female and male musicians exposes a complex representation of relationships and emotions, indicating a shift away from traditional gender standards in modern music.

This sociolinguistic research of pop song lyrics provides insight into the dynamic interaction of language, gender roles, and society development. Artist narratives, whether through themes of nostalgia, possessiveness, vulnerability, or assertiveness, all contribute to a reworking of gender roles in modern music. As the language landscape of pop songs evolves, it becomes a powerful mirror reflecting social developments toward more inclusive and nuanced views of gender and relationships. This investigation encourages additional research into the interaction of language, culture, and gender dynamics in the ever-changing world of popular music.

ABSTRACT

This article exposes crucial points of indifference in Joyce Carol Oates' work entitled *Where Are You?*. When people are indifferent or apathetic, they do not care about anything happening around them, and/or do not do anything about it. Indifferent personalities might be perceived as being chilly, distant, disinterested, unmotivated, and lacking in passion. This flash fiction is about a married couple whose deaf husband is carefree. Without realizing it, the indifferent behavior results in harm to the wife. Then, how may indifference be actualized on *Where Are You?* by Joyce Carol Oates? Through a qualitative method, the analysis of this paper explores how indifference affects human psychology, the expectations people have, and the significant impacts they have on people's surroundings. In conclusion, the story shows that indifference is not trivial, but it could bring further harm if it persists in any relationship.

Keywords: Indifference, Joyce Carol Oates, *Where Are You?*

Introduction

Indifference can be defined as the perceived absence or decline of motivation towards a particular objective or task that is related to said objective (Miceli & Castelfranchi, 2000; Annasai et al., 2024). The emergence of indifference may occur when individuals feel utterly powerless in addressing the challenges that exist in their personal lives, relationships, communities, and the world at large due to the overwhelming nature of these challenges. Consequently, even though individuals possess awareness of their surroundings, they may experience a sense of incapacity to effect any change. Consequently, they might simply dismiss the situation, carry on, and refrain from taking any action (Buckle, 2013; Listyaningsih et al., 2022).

This story of *Where Are You?* is related to the relationship between a husband and wife who no longer understand each other. One wants more than the other one. It can be called egoistical, which means the person who is blamed will become more selfish (Miceli & Castelfranchi, 2000; Annasai et al., 2024). Then it could come up with the idea of indifference because the husband is more selfish and needs more attention than his wife.

Through the background, this paper would like to answer the question of “how may indifference be actualized in Joyce Carol Oates’ *Where Are You?*”. This passage underlines indications of indifference in everyday life. The husband considers his indifference habit to be trivial. It may seem inessential, but he never thinks about the consequences of his habit in the future, which unconsciously leads his wife to pass away.

Method

Using a qualitative approach, this paper analyzes specific concepts and written information to address the proposed question. Employing an exploratory method, both online and offline texts are utilized to explore the correlation between Joyce Carol Oates' literary work of *Where Are You?* and the field of human psychology, focusing particularly on the concepts of indifference and apathy. These online and offline sources consist of books and academic journals, enabling a comprehensive understanding of the subjects at hand. The process of data analysis involves sourcing relevant materials, thorough reading and careful comparison, citation integration, and the compilation of comprehensive reference lists. The research data encompasses both Joyce Carol Oates' flash fiction and the field of human psychology, with each component meticulously analyzed and deconstructed. Subsequently, the analysis delves into how the husband's behavior impinges upon the wife's circumstances. In this context, Joyce Carol Oates' flash fiction serves as the object of scrutiny, while the study of human psychology, particularly in relation to indifference, serves as a valuable analytical tool. Additionally, details regarding the further, deeper, and wider analysis are also given.

Findings and Discussions

Intra-Marriage Conflicts and Beyond in *Where Are You?*

Published in 2018, *Where Are You?* is Joyce Carol Oates' literary work that gives a typical perception of a dictatorial husband. The readers might say that this flash fiction is about intra-marriage conflicts. It is true, but it also contains more than that. It underlines the matter of being ignorant, in which every single need must be fulfilled as soon as possible (Kim et al., 2021; Oates, 2018). This condition prolongs and indeed brings more than merely problems. This situation is never equivocal at all. Those are indicated in the following quotations:

Data 1

"The husband had got into the habit of calling the wife from somewhere in the house—if she was upstairs, he was downstairs; if she was downstairs, he was upstairs—and when she answered, "Yes? What?," he would continue to call her, as if he hadn't heard and with an air of strained patience: "Hello? Hello? Where are you?" (Oates, 2018)

When his wife is not in his line of sight, a husband with hearing impairment gets used to yelling out to her frequently and repeatedly for petty reasons. He might even show apathy and ignorance as well (Kim, et al., 2021; Oates, 2018). Such behavior irritates and frustrates his wife to the point where she sacrifices her own life.

He does not care where his wife is, whether she is downstairs or she is upstairs. If she is downstairs, he is upstairs. In reverse, if she is upstairs, he is downstairs, and so on. Even after his wife answers, he will continue to call her as if he has not heard anything. He keeps continuing to call her repeatedly and without patience.

Data 2

"And so she had no choice but to hurry to him, wherever he was, elsewhere in the house, downstairs, upstairs, in the basement or outside on the deck, in the backyard or in the driveway. "Yes?" she called, trying to remain calm. "What is it?" And he would tell her—a complaint, a remark, an observation, a reminder, a query—and then, later, she would hear him calling again with a new urgency, "Hello? Hello? Where are you?," and she would call back, "Yes? What is it?," trying to determine where he was." (Oates, 2018)

As the husband has an annoying habit of calling his wife repeatedly and impatiently, she has no choice but to come as if she surrenders to her husband at all (Oates, 2018; Sharafutdinova, 2021). She would look for her husband wherever he was, whether he was inside or outside the house. Then, when she finally found him, the husband would tell her things such as unimportant complaints, reminders, questions, and observations.

Later, after that, he would call her again with a new urgency and she would call back and try to figure out where he was. Such behavior is intolerable even if it comes from a man who wears hearing-aid devices. This proves that the love for his husband from his wife is greater than the husband could give to his wife (Kim, et al., 2021; Oates, 2018). The husband just wants to be cared for and is afraid of being lonely.

Data 3

“He would continue to call, not hearing her, for he disliked wearing his hearing aid around the house, where there was only the wife to be heard. He complained that one of the little plastic devices in the shape of a snail hurt his ear; the tender inner ear was reddened and had even bled, and so he would call, pettishly,” (Oates, 2018)

Since the husband has the mindset of a conventionally domineering spouse, he refused to wear hearing aids out of selfishness due to only the two of them in the house. Rather, if he wants to say something, he calls her impatiently to tend to him like a slave (Oates, 2018; Sharafutdinova, 2021). This whole situation is unfair. The wife can tolerate his annoying habits but the husband does not want to tolerate his hearing aid (Oates, 2018; Schnell, 2010).

Data 4

“Hello? Where are you?”—for the woman was always going off somewhere out of the range of his hearing, and he never knew where the hell she was or what she was doing; at times, her very being exasperated him—until finally she gave in and ran breathless to search for him, and when he saw her he said reproachfully, “Where were you? I worry about you when you don’t answer.” “No, you were not. You were not. I was here but you were not here.” (Oates, 2018)

When she was not there, he would continue to burden her with his insecurities saying that her presence was not enough. He never even thinks that the wife’s presence is enough (Oates, 2018; Schnell, 2010). No one considers being deaf and totally annoying, but this husband’s urge to have control over his wife’s life irritates her. He acts rude

towards her, blaming her for not even being around (Oates, 2018; Sharafutdinova, 2021).

Data 5

“What do you want? I’ve told you, I’m here.” But the husband couldn’t hear and continued to call, “Hello? Where are you? Hello!” and finally the wife had no choice but to give in, for the husband was sounding vexed and angry and anxious. Descending the stairs, she tripped and fell, fell hard, and her neck was broken in an instant, and she died at the foot of the stairs, while in one of the downstairs rooms, or perhaps in the cellar, or on the deck at the rear of the house, the husband continued to call, with mounting urgency, “Hello? Hello? Where are you?” (Oates, 2018)

And he retorted. On the other hand, the wife feels irritated and frustrated by his behavior, sudden disruptions of her daily routine for petty reasons. She was frustrated by his calling, so she quickly ran to him and crashed on the stairs and died. At the very end, the husband’s hopeless situation of being lonely comes true. The sense of asking has evolved into a sense of sorrow.

The ideas listed above show that the characters lack understanding of each other. With the husband's intolerable habit, instead of communicating it, the wife chose to surrender until she sacrificed her life. The husband cannot tolerate his hearing aid due to the reddening of his inner ear and has even bled, but the wife also ignores him. There are only the two of them in the house, so he would call his wife pettishly and again instead of communicating.

What happens between them is so selfish to each other, and it could come up with the idea of indifference. There should be good communication in a relationship in order to prevent such conflicts. His fears of being alone became real because his seemingly trivial behavior caused his wife to fall down the stairs, break her neck, and die instantly.

Indifference and Its Continuation to Insensitivity

Indifference can be interpreted as a state of detachment towards any individual (Scott, 2007; Clark, 2020). Those who exhibit indifference fail to acknowledge the presence of others or their predicaments. They focus primarily on their own concerns and exhibit a lack of involvement in aiding others, often displaying no reaction to the problems faced by others. Consequently, they have surrendered their sensitivity, a significant quality inherent to human beings (Nurdin, et al., 2024; Wang, 2022; Yeoh, 2003). This implies that individuals may feel powerless to effect change, even when they possess awareness of their surrounding circumstances.

When individuals encounter a lack of understanding and are faced with a multitude of options, their response tends to be one of apathy. This reaction could potentially serve as a defense mechanism, safeguarding individuals from elements that surpass their control and comprehension (Nurdin, et al., 2024; Wang, 2022; Yeoh, 2003). Additionally, apathy is distinguished by a gradual loss of interest, concern, or emotional investment in a specific circumstance or towards particular occurrences or individuals. It can be discerned through an absence of emotional reaction, limited involvement in activities, and an overall sense of detachment or disinterest.

Indifference may also manifest as a lack of reaction to stimuli or events that would typically evoke a response in others (Curtis & Jones, 2020; Nurdin et al., 2024; Prentice et al., 2020). In clinical psychology settings, indifference can be assessed through observation of a person's emotional and behavioral responses to various stimuli and situations. It is important to note that indifference, like apathy, can have significant implications for an individual's well-being and may require appropriate evaluation and support. (van Reekum et al., 2005; Seijo et al., 2020; Suyaji et al., 2024).

People may easily do indifferent deeds, but the reasons behind them may always vary to cope with it (Leander & Shah, 2014; Seijo et al., 2020). This could be a syndrome, and these discussions developed into two causes: indifference as a behavioral syndrome and indifference as an emotional syndrome (Ryff, 2022; Sansone & Sansone, 2010; Suyaji et al., 2024).

As a behavioral syndrome, indifference is practiced in life. Somehow, it could come up instantly and even without any second thought. The emotional syndrome of indifference is more severe since it covers the matter of being ignorant through any cultural sense (Curtis & Jones, 2020; Prentice et al., 2020). The matter of being ignorant has been planted in people's minds for a long time, until it becomes a syndrome.

Indifference is particularly experienced, but it is universal, as known by all people (Leander & Shah, 2014; Ryff, 2022). If prolonged, indifference may result in a lack of life goals in humans. This is in line with apathy, in which there is an absence of sympathy. The heart has become so cold that it shows such diminished motivation in an individual in all levels of consciousness. Being indifferent could bring advantages since it relates to negative tolerance (Leander & Shah, 2014; Ryff, 2022; Suyaji et al., 2024). However, if people keep doing that, they may become more confident, but indeed, it slowly destroys interpersonal relationships.

The Harms of Being Indifferent in *Where Are You?*

Where Are You? is a flash fiction that presents a stereotypical image of a controlling husband. A husband with hearing loss becomes accustomed to shouting to his wife for petty reasons whenever she is out of his direct line of sight. He might even show apathy (Creighton, 2008; Wirnoto, et al., 2023). This story tells the readers about how selfish and careless the husband is. On the other hand, his wife had no option but to deal with his annoying behavior.

This flash fiction also emphasizes how careless the husband is toward his wife (Marin, 2010; Oates, 2018). He would call her repeatedly for nothing without even trying to understand where his wife was—whether she is downstairs or upstairs, inside or outside the house. The story tells the readers that people should not be selfish nor keep egotistical behavior or worse, indifference.

Through the husband's character, the figure of indifference is articulated further (Marin, 2010; Oates, 2018). His character underscores indifference in his everyday behavior. The lack of emotional response that he should have given his wife the understanding that he is not the only center of attention, even though they are the only ones in the house.

Although being deaf is not considered annoying, this husband's desire to control his wife's life annoys her. Indifference and insensitivity are familiarized to egotistical deeds (Liu & Upenieks, 2021; Schnell, 2020). With only the two of them living together, he refused to wear his hearing aid out of selfishness since he has a mindset of a traditional controlling spouse. Instead, he rapidly calls her to take care of him like a slave whenever he needs to say something. He would keep bothering her about his worries when she was not around, telling her that her presence was not enough (Oates, 2018; Venema, et al., 2020).

When ego wins, it will go wilder than before as it may also produce such indifferent deeds (Creighton, 2008; Wirnoto, et al., 2023). It is also ignorant to anything beyond this ego. The lack of attention to his wife is indicated by a loss of sensitivity. He should be aware of the situation and what his wife is going through. This marks how indifferent the husband's character is. The readers could also possess the capacity to determine individual emotional or behavioral responses to different circumstances (Liu & Upenieks, 2021; Schnell, 2020).

The flash fiction also comes up with the idea that the husband is actually scared of being lonely due to his ability to not hear anything (Lillehammer, 2014; Oates, 2018). It makes him feel like he is always alone and he needs more attention from his wife for always being around him. Since there are only the two of them in the house, he never tries to understand her point of view. The lack of sensitivity has also diminished any intention to handle better communication through dialogues (Liu & Upenieks, 2021; Schnell, 2020).

These ideas of indifference could affect everyone's close ones, such as partners, spouses, and family members. This feeling is something that people can feel or change. There is emphasis on the absent emotions and responses to situations or stimuli that would typically affect others. The husband appears to struggle with his hearing loss problem so it makes him need more validation, the feeling of needing to be loved more (Lillehammer, 2014; Oates, 2018).

It is proven from the line where the wife is not always beside him, but he always requires her more than anything. Despite the wife becoming so enraged and frustrated by this behavior, this story clearly shows the readers that the wife has bigger love in this relationship that she sacrifices her own life (Lillehammer, 2014; Oates, 2018).

This is also intended to furtherly show such complex ideas of love. It is also proven that giving is not enough in showing love. Further sacrifice even is not enough since it may not be really well accepted by the other partner. In this flash fiction, it is more underlined that significance of love is better to be understood through ideas of dialogues rather than merely taking and giving actions (Lillehammer, 2014; Oates, 2018).

Conclusion

Indifference is having no interest, concern, or sympathy towards others. In psychology, it is often referred to as apathy, which is a state of disinterest or lack of concern for something or someone. It is also an attitude that appears in everyday life and literature. An absence of interest or attention brought by ignorance, idleness, boredom, and fatigue could be characterized as indifference. In *Where are You?*, the husband's character shows that he is eager to control his wife by repeatedly calling her is categorized as ignorance. His wife must always be available for her husband whenever he called regardless of what she was doing or where she was. He needed her presence right away for no specific reason. Overall, *Where Are You?* highlights the danger of indifference since not everyone may react to indifference in the same way. The wife could not always deal with the husband's indifference forever. There are proven moments when his wife tumbled to her death due to his ignorance attitude done by the husband.

Cultural Adaptation of International Exchange Students: Case Study of IISMA 2023 in Middle East Technical University of Turkiye

Shavina Lestiani, Suprayogi Suprayogi

@shavinalestiani2402@gmail.com, suprayogi@teknokrat.ac.id

Universitas Teknokrat Indonesia

Abstract

This article examines the cross-cultural adaptation of Indonesian students during the IISMA 2023 exchange program at Middle East Technical University (METU), focusing on their experiences in academic and cultural settings. The study aims to explore how students adjusted to METU's diverse classroom environment, engaged with local peers, and dealt with cultural challenges. Using a qualitative approach, data was collected through three types of surveys: Likert scale, short answer, and semi-structured interviews. The participants, 12 out of 20 IISMA METU 2023 awardees, responded to questions related to cultural adaptation, academic challenges, and reintegration upon returning to Indonesia. The Likert survey assessed students' perceptions of adaptation, while the short answer survey focused on the most challenging cultural differences and key lessons from Turkish culture. The interviews provided in-depth insights into their initial experiences, interactions with local students, and how they applied the knowledge gained during their exchange. The findings are classified under three themes: Challenges and Differences, Adaptation and Assimilation, and Reintegration, based on Kim's (2001) cross-cultural adaptation theory.

Key words : Cross-Cultural Adaptation, Culture, IISMA, Middle East Technical University, Student Exchange,

Introduction

Cross-cultural studies are crucial for understanding how different cultures shape behavior, communication, and social systems. Holliday, Hyde, and Kullman (2010: 5) explain that these studies help us grasp “how cultural identities are built and understood through the way we communicate”. Similarly, Smith (2018:92) emphasizes that “cross-cultural studies give us the tools to analyze how globalization affects cultures and to encourage understanding between different societies”. These ideas are especially relevant in international student exchange programs, where students experience new cultures firsthand. By stepping into a different environment, students can apply what they’ve learned about cross-cultural dynamics in real-life situations, deepening their understanding and appreciation of the world’s diversity.

International student exchange programs are a key part of cross-cultural education, allowing students to study and live in another country. These programs let students directly engage with the cultures and societies they’ve only read about. The benefits are wide-ranging; students develop important skills like communication, adaptability, and cultural awareness, which are vital in today’s interconnected world. Student exchange programs show great significance towards students by helping them through their future careers and personal growth in addition to helping to achieve cross-cultural understanding among countries. (Vande Berg, Paige, and Lou, 2012).

Moreover, learning to navigate a new cultural setting builds resilience and problem-solving abilities, which are valuable in both school and work life. As competition in the global job market intensifies, having a broad set of skills is more important than ever. Being able to communicate and work with people from different cultures is a major advantage for graduates entering the workforce. Indonesia, too, recognizes the need to improve its human resources to strengthen its economy. It is crucial for Indonesia’s future to boost the quality of human capital as it helps the global standing and economic progress of the country (World Bank, 2022).

To address this, the Indonesian Ministry of Education, Culture, Research, and Technology introduced the *Merdeka Belajar Kampus Merdeka* (MBKM) program, aiming to transform the education system and better prepare students for modern job market demands. The MBKM is designed to offer students more flexibility in their studies, encouraging hands-on learning and real-world applications. This initiative includes several important programs, such as *Magang dan Studi Independen Bersertifikat (MSIB)*, *Pertukaran Mahasiswa Merdeka (PMM)*, *Kampus Mengajar*, *Membangun Desa (KKN Tematik)*, *Proyek Kemanusiaan Riset dan Penelitian*, *Wirausaha Merdeka*, and *Indonesian International Student Mobility Awards (IISMA)*, all aimed at building students’ practical skills and global experience. Among these, IISMA stands out as an annual program that allows Indonesian students to study abroad for 3-4 months at top universities worldwide.

Participants in IISMA need strong English skills and are selected based on their academic performance and leadership qualities. The program is believed to not only

enhance students' academic and language skills but also immerses them in new cultural environments, broadening their global perspectives. **This article is written to explore students' views towards their experiences as an IISMA 2023 awardee at Middle East Technical University (METU) in Turkey from the perspective of cross-cultural understanding framework.**

Literature Review

International Student Exchange Program

International student exchange programs play a crucial role in connecting cultures and promoting global understanding. Deardoff (2006) suggests that these programs help students develop intercultural competence, allowing them to communicate effectively with people from different cultures. By studying abroad, students gain insights into new ways of learning and living, fostering personal growth in areas like independence, adaptability, and global awareness (Jackson, 2018). These skills are vital in today's interconnected world, as living in a foreign country broadens perspectives, breaks down cultural barriers, and fosters global citizenship. The relationships built often form lifelong international networks, valuable both personally and professionally.

Programs like IISMA, YSEALI, Global UGRAD, and ERASMUS significantly contribute to students' growth by enhancing hard and soft skills such as language proficiency, critical thinking, and leadership (European Commission, 2020). These skills are highly valued by employers worldwide (Institute of International Education, 2022). Beyond academics, alumni of programs like YSEALI often use their international networks to advance their careers and support community development (U.S. Department of State, 2021). Ultimately, international student exchange programs equip students with the skills and experiences needed to thrive in our increasingly globalized world.

Indonesian International Student Mobility Award (IISMA)

IISMA is a scholarship program aimed at broadening Indonesian students' global perspectives, enhancing their professional skills, and fostering international networks through one-semester exchanges at top global universities. The program offers three main schemes: the Regular Scheme, which provides full scholarships for academically strong students; the Affirmative Scheme, designed for students from disadvantaged regions or those receiving financial aid such as KIP-Kuliah; and the Co-Funding Scheme, where costs are shared between the government and the students, allowing for more participation through partial self-funding. By participating in IISMA, students can earn 20 transferable academic credits while gaining exposure to advanced concepts and cutting-edge research across various disciplines. This multidisciplinary learning allows students to take courses beyond their major, such as entrepreneurship or environmental science, encouraging intellectual curiosity and broadening their academic horizons. Additionally, IISMA emphasizes cross-cultural competence, helping students immerse themselves in a foreign culture, engage with local and international peers, and build a robust global network. These experiences not only prepare them for the challenges of a globalized job market but also foster personal growth, resilience, and

adaptability. Upon returning to Indonesia, students are expected to apply their new insights and contribute to their future careers, enriched by their international experience.

The selection process for IISMA is thorough and competitive, ensuring that only highly qualified candidates are selected. It begins with document and essay submission through the IISMA portal, where students provide academic transcripts, recommendation letters, and four essays detailing their achievements, motivation for studying abroad, and plans for community engagement during the program. A Nationality Test also assesses candidates' understanding of their cultural and national identity. Those who pass the initial stage proceed to an interview and CV review, where they are evaluated on their academic goals, communication skills, and overall readiness for international study. To further prepare students, the IISMA Pre-Departure Series (IISMA-PS) offers essential training in financial management, academic expectations, personal safety, and psychological readiness. Additional sessions focus on content creation and social media engagement, equipping students with the skills to document and share their experiences abroad. The series culminates in a final presentation of their social campaigns, reflecting the knowledge and insights gained during the program. Through this comprehensive preparation, IISMA ensures that students are fully equipped to thrive in their global learning experience and bring back valuable contributions to their home institutions and communities.

Cross-Cultural Adaptation Theory

Diagram.1 The Relationship between Key Terms in Cross-Cultural Adaptation
(Kim, 2001)

Kim (2001) identifies two key stages in the process of adaptation: cultural adaptation and cross-cultural adaptation. Cultural adaptation refers to the fundamental communication process where there is a sender, medium, and receiver, leading to encoding and decoding of messages. It is characterized by the changes individuals

undergo when they relocate to a new environment. In this stage, the newcomer receives messages from the local population, and as they understand these messages, the process of enculturation—learning the norms of the new culture through socialization—takes place. The second stage, cross-cultural adaptation, involves three main components: (1) Acculturation, where individuals, after interacting with a foreign culture, begin to integrate new cultural norms and values into their lives; (2) Deculturation, where prior cultural patterns influence adaptation, as individuals gradually shed certain aspects of their original culture; and (3) resistance to the new culture, which can lead to social withdrawal. This adaptation process shapes individuals' psychological and social behaviors as they develop new cultural identities and navigate their intercultural experiences (Kim, 2001).

Method

This research utilizes a qualitative approach to gain a comprehensive understanding of the cross-cultural experiences of IISMA METU 2023 awardees during their exchange program in Turkey. The goal is to explore their challenges, cultural adaptation, and the impact of the exchange on their personal and academic growth. The data collection consists of three distinct surveys: a Likert scale survey, a short answer survey, and interviews, each designed to capture various aspects of their exchange journey. The data was primarily gathered through a Google Form survey that included both a Likert scale and short answer questions. The survey was distributed via the IISMA METU 2023 WhatsApp group chat, requesting all 20 awardees to participate. Out of the 20 awardees, 12 responded to the survey, providing valuable quantitative and qualitative data. At the end of the survey, participants were also asked if they were available for follow-up interviews and all 12 participants were available for the interview.

Table 1. Participant's Initial and Home University

Participant	Initials	Home University
1	MRRP	Universitas Padjajaran
2	AAI	Universitas Muslim Indonesia
3	EAN	Universitas Pendidikan Indonesia
4	CNP	Universitas Surabaya
5	DKMS	Universitas Sumatera Utara
6	NFF	Universitas Ari Ganjar
7	MFANR	Universitas Halu Oleo
8	DAR	Universitas Tidar

9	ZAK	Universitas Brawijaya
10	ITM	Universitas Padjajaran
11	HMI	Universitas Indonesia
12	OY	Universitas Sebelas Maret

This method ensured that the study captured a wide range of experiences and reflections, using the Likert scale to quantify perceptions and the short answer and interview responses to explore personal insights and experiences in more depth.

- **The Likert scale** survey includes 10 questions, with responses ranging from "Strongly Disagree" (1) to "Strongly Agree" (4). This survey was designed to quantify participants' perceptions of their cultural adaptation, academic challenges, communication skills, and reintegration upon returning to Indonesia. The Likert scale allows for a quick, easy assessment of how participants viewed their time in Turkey and their adjustment to the new environment.
- **The short answer survey** consists of 3 questions that invite participants to reflect on their most challenging cultural differences, personal growth, and their understanding of Turkish culture. These questions were crafted to encourage deep reflection, asking participants to provide detailed accounts of their experiences, thoughts, and lessons learned during their exchange. The answers offer rich qualitative data that complements the more structured Likert responses.
- **Semi-structured interviews** were conducted with the same 12 participants who completed the survey. These interviews consisted of 4 open-ended questions and were designed to provide a more in-depth exploration of the participants' cross-cultural experiences. Interviews were conducted via Google Meet or WhatsApp voice notes for flexibility. The interview format allowed for follow-up questions based on the participants' responses, offering deeper insights into their adaptation strategies, interaction with locals, academic experiences, and post-return reflections.

By employing these three methods of data collection, the study provides a thorough understanding of the cross-cultural experiences of the IISMA METU 2023 awardees. Through the Likert survey, quantitative data is collected to assess the participants' overall satisfaction and challenges. The short answer survey allows for personal reflection, while the interviews provide in-depth narratives and insights into their adaptation and personal growth. Together, these methods form a comprehensive approach to understanding the complexities of cross-cultural exchanges.

Findings and Discussion

This section of the study is divided into three key themes: **Challenges and Differences, Adaptation and Assimilation, and Reintegration**, following the framework established by Kim's (2001) theory of cross-cultural adaptation. These themes provide a clear structure for analyzing the cross-cultural experiences of Indonesian exchange students in Turkey, as they reflect the various stages of their intercultural journey. The findings are supported by quantitative data from the Likert survey and qualitative insights from the short answer survey and interviews. Additionally, we will incorporate Kim's (2001) theory on factors affecting adaptation, such as personal communication, host communication, and environment, which are crucial in understanding the nuances of the adaptation process.

Dividing the findings into these three themes allows for a more organized and focused exploration of the students' experiences. By examining Challenges and Differences first, we gain insight into the initial hurdles participants faced in Turkey, followed by how they adapted and assimilated into the local culture. The final section, Reintegration, addresses the complex process of returning to Indonesia, including the challenges of readjusting to life at home after gaining new perspectives abroad. This division is aligned with the stages of adaptation identified in Kim's (2001) theory, making it easier to analyze the dynamic and non-linear nature of cross-cultural adaptation.

Challenges and Differences

The initial stage of cross-cultural adaptation is often characterized by cultural shock, as described by Kim (2001). Cultural shock refers to the disorientation individuals experience when they encounter a culture vastly different from their own. This phase involves confronting new norms, values, and social practices that diverge from one's familiar cultural environment. During this period, individuals must learn to "decode" the host culture, a process that involves understanding and interpreting new social cues, behaviors, and expectations that may initially seem alien or confusing (Kim, 2001). The stress and discomfort associated with these unfamiliar elements can lead to a variety of emotional responses, such as frustration, confusion, or even anxiety.

For instance, individuals may struggle with everyday activities that are routine in their home culture but require significant adjustment in the new context. These challenges can be compounded by language barriers, differing social norms, and unfamiliar customs, all of which can make the adaptation process feel overwhelming. According to Kim, this initial phase of adaptation often includes significant struggles with daily routines, social interactions, and a general sense of disorientation as individuals navigate their new environment. The early stages of cross-cultural adaptation are marked by these challenges, which are critical for understanding how individuals transition from initial discomfort to eventual adjustment and integration into their new environment.

Understanding these challenges is crucial for developing effective strategies to assist individuals in navigating and eventually overcoming the initial barriers to adaptation. This foundational stage sets the stage for later phases of cultural adaptation, where

individuals begin to integrate and find ways to thrive within the new cultural milieu (Kim, 2001). The following survey and interview questions are designed to capture participants' experiences and perceptions related to this initial stage.

Chart 1

Chart 2

For the first statement, “I don’t feel welcomed and included by the local community during my stay,” the majority of respondents disagreed, with ten participants expressing disagreement and only one agreeing. This indicates that most participants felt welcomed and included by the local community during their stay in Turkey, with very few feeling isolated or excluded. The second statement, “It is hard to follow the academic style, rules, and environment at METU,” received mixed responses. While three participants strongly agreed and another three agreed, six disagreed. This suggests that academic adaptation poses a challenge for some study.

Chart 3

Chart 4

Regarding the statement, “I experienced homesickness frequently during my time in Turkey,” most respondents disagreed, with four strongly disagreeing and five disagreeing. Only one participant strongly agreed. This shows that while some students experienced homesickness, the majority did not frequently feel homesick during their exchange. In response to “The cultural differences I encountered during my stay in Turkey significantly influenced my worldview,” eight participants strongly agreed, and three agreed. This suggests that cultural differences during the exchange played a significant role in shaping the participants' perspectives on the world.

The pattern observed in the short answer survey responses on **“What was the most challenging cultural difference you encountered during your exchange, and how did you overcome it?”** indicates that adapting to local cuisine is a common challenge faced by participants during their exchange. This issue is prevalent among several responses, suggesting that food culture and dietary preferences play a significant role in the overall cross-cultural adaptation process.

Food is an integral part of cultural identity and daily routines. When participants encounter a cuisine that is markedly different from their own, it can affect their comfort and sense of well-being. The survey responses reveal that many participants struggled with the taste and ingredients of Turkish cuisine compared to their Indonesian food. This challenge reflects how deeply personal and culturally significant food is, influencing not only taste preferences but also overall satisfaction and adjustment to the new environment.

Datum 1

MRRP: *“The cuisine is much different than Indonesian one so I have to adjust the taste by bringing my own spice from Indonesia.”*

Datum 2

HMI: *“Food, I am not fond of the taste of sour and tangy that Turkish food provides. I managed to overcome it by cooking my own meal”*

For instance, participants like MRRP and HMI mentioned specific difficulties with the flavors and ingredients of Turkish food. MRRP faced challenges with the cuisine’s taste and responded by bringing spices from Indonesia, while HMI was not fond of the tangy flavors and managed the situation by cooking their own meals and occasionally trying local food. These strategies underscore how participants attempt to bridge the gap between their familiar food practices and the new culinary environment.

Additionally, food-related issues often intersect with other aspects of cultural adaptation, such as social interactions and daily routines. Food serves as a social tool, and difficulties in adjusting to local cuisine can sometimes impact participants’ ability to fully engage with their new cultural surroundings. The challenges faced in adapting to different food cultures highlight the broader theme of how daily life and personal preferences influence the overall cross-cultural experience.

Furthermore, analyzing the interview responses on **““Can you describe your initial experiences when you first arrived in Turkey? How did you adjust to the cultural differences?””** reveals a recurring pattern in the participants’ initial experiences and adjustments to cultural differences in Turkey. A common theme is the initial shock and difficulty in adapting to unexpected cultural practices, particularly related to food, social norms, and language barriers. Most participants reported a mix of excitement and discomfort when they first arrived, highlighting both the novel aspects of their new environment and the challenges they faced.

For instance, MFANR was surprised by the secular nature of Turkish society despite its Muslim-majority population, particularly noting the absence of traditional practices like attending Jumah prayers. This cultural discrepancy was unsettling at first but gradually became easier to manage over time. Similarly, CNP found the language barrier to be the most significant challenge. They struggled with communication, especially when interacting with locals who did not speak English, which made the initial adjustment period more difficult.

Datum 3

MFANR : *“I think the first cultural difference, or what you would call cultural shock, was how different the people there were [...].When I was about to pray Zuhur, no one was in the mosque. That was really different. And then for Jumah, in Indonesia, even if you're not very conservative, you still pray Jumah. But in Turkey, I had a friend named Mehmed Barish—his name was very Muslim—but he didn't pray Jumah. That was a shock.”*

Datum 4

CNP : *“After I got excited, we spent about 2 hours applying for documents, and the receptionist couldn't speak English. That was the first time I realized, “Is this for real?” But I didn't worry much, thinking she might be new or overwhelmed. However, in the next few days, interacting with local people made me realize that language would be a problem. The language was the most challenging part.”*

The frequent mention of food and language barriers in the responses suggests that these factors are significant sources of cultural shock. Many participants, like ZAK, struggled with the differences in food, missing the familiar flavors and ingredients from home, and DKMS also highlighted the language barrier as a major adjustment challenge. The reason for these difficulties often stems from the stark contrast between their home culture and the new environment, which can initially feel overwhelming and disorienting. This challenge is compounded by the practical aspects of daily life, such as navigating new social norms and adapting to different lifestyles.

Datum 5

ZAK : *“Of course, there are a lot of things that were my first time, like my first experience in everything. Especially abroad, where the culture is usually different. For example, food, because I have a concern with food, and I love delicious food, like, who doesn't? But it's pretty hard to find food that tastes like Indonesian food. I mean, the spices, the meat chain, MSG. So that was the first culture shock.”*

Datum 6

DKMS : *“And also the language barrier was such a challenge for me. And because of that, I had to get accustomed to the local customs and social norms there. And to adjust, I began taking Turkish language classes and made an effort to engage with local people*

and also local students there. And I also immersed myself in Turkish traditions and cuisine which helped me feel more connected to the culture there.”

Overall, these insights underscore the importance of preparing for and acknowledging the difficulties associated with adapting to a new cultural environment. Participants' experiences highlight the need for resilience and openness when facing cultural shocks and adjusting to a new lifestyle, which ultimately contributes to their personal growth and understanding of cross-cultural dynamics.

From the data collected in the short answer survey regarding the “**How did the academic environment at METU compare to your home university? What challenges or opportunities did you encounter?**”, several common themes emerge. A notable pattern is the significant difference in teaching styles and academic expectations. Many participants reported challenges in adapting to the more interactive and demanding academic environment at METU compared to the more lecture-based and less rigorous systems at their home institutions. These challenges include adjusting to a higher volume of reading and assignments, different grading systems, and navigating language barriers or unfamiliar teaching methods.

Datum 7

MRRP : *“So the first challenge is, of course, that in my home country and university, we study in Indonesia, which is much, much easier than in Türkiye. Another challenge was that during my time at METU, I chose four courses, and three of them were outside my major. Two of them were from political science and one from international relations, so I had to learn everything from scratch, as I had no prior knowledge of these subjects. This was a challenge.”*

Datum 8

AAI : *“There are huge differences between the learning systems. At METU, it requires a lot of discussions in class. You have to read articles and books before entering, and when you're in class, you have to speak about what you read and debate or discuss it with the lecturer, which was a struggle for me because I'm not used to that. In my home university, it's more about lecturing, doing assignments, or presentations. But in METU, you have to use your critical thinking and public speaking, bringing arguments into the discussion, which was really challenging.”*

For example, MRRP experienced difficulties with METU's more intensive coursework and language barriers, as many of the courses were outside their major and required learning new subjects from scratch. This adjustment was compounded by having to communicate with mostly Turkish-speaking classmates. On the other hand, AAI found the transition challenging due to METU's emphasis on class discussions and critical thinking, which was different from the more lecture-based approach at their home university. The requirement for frequent assignments and active participation was a significant departure from their previous academic experience.

These differences illustrate the challenges students face when adapting to a more rigorous academic environment. The interactive and demanding nature of METU's academic system requires students to adjust their study habits and engagement levels significantly. However, these challenges also offer opportunities for growth. The increased academic demands at METU can enhance students' critical thinking, adaptability, and overall academic skills, providing valuable experience that can benefit their future academic and professional endeavors.

Adaptation and Assimilation

Adaptation and assimilation are critical for understanding how individuals adjust to new cultural environments. Adaptation involves gradually learning and adopting the norms and practices of the host culture while retaining aspects of one's original identity. This process includes acquiring cultural competencies such as language skills and understanding social norms, which help individuals function effectively in the new setting.

Assimilation follows adaptation and involves a deeper integration into the host culture. It requires individuals to fully embrace and internalize the host culture's norms and practices, making them second nature. This phase is characterized by a high level of comfort and fluency in navigating the new cultural environment. Both adaptation and assimilation are dynamic and influenced by factors such as personal resilience, support systems, and the host culture's receptivity, highlighting the need for continuous adjustment and negotiation between one's original and new cultural contexts.

Kim's (2001) model of cross-cultural adaptation identifies five critical factors influencing an individual's ability to adjust to a new culture: personal communication, host social communication, ethnic social communication, environment, and predisposition. Personal communication involves effectively interacting with the host culture, including learning the local language and social norms, which facilitates smoother integration and relationship-building (Kim, 2001). Host social communication refers to interactions with members of the host culture, such as students and community members, whose support can enhance the adaptation experience by fostering a welcoming environment and mitigating isolation (Kim, 2001).

Ethnic social communication encompasses maintaining connections with one's cultural group for emotional support during cultural transitions, helping manage homesickness and adjustment challenges (Kim, 2001). The environment includes the physical and social context of the host setting, with a supportive and stimulating environment offering both challenges and opportunities for growth (Kim, 2001). Lastly, predisposition relates to individual characteristics such as prior international experience and openness to new experiences, which can impact the ease of cultural adjustment (Kim, 2001). Understanding these factors highlights the complex, multifaceted nature of cross-cultural adaptation and underscores the importance of effective communication, support networks, and individual openness in successfully navigating cultural transitions.

Chart 5.

Chart 6.

The first statement, “I found it easy to adapt to the cultural norms and practices in Turkey,” shows that the majority of participants responded positively. Seven participants agreed, while three disagreed. This suggests that most of the participants found the cultural adaptation process manageable, although a smaller portion experienced difficulties. This second statement, “Due to my current English proficiency, I feel more confident in my ability to communicate and interact with people from different cultural backgrounds,” shows that the majority of participants (seven) agreed, while three disagreed. This indicates that most participants felt confident in their English skills, which helped them interact and engage across cultures.

Chart 7.

Chart 8.

The third statement, “I was able to effectively navigate communication challenges that arose from language and cultural differences,” was agreed upon by eight participants, with one strongly agreeing. Only three participants disagreed, suggesting that most participants felt they successfully managed communication challenges during their exchange. Regarding the statement, “Engaging with Turkish students and faculty broadened my perspective on international collaboration and cross-cultural teamwork,” ten participants strongly agreed, and two agreed. This overwhelming positive response shows that engaging with the local academic community had a significant impact on broadening participants’ global perspectives.

Chart 9

For the statement, “I felt supported by both the Indonesian and Turkish communities when dealing with moments of cultural adjustment,” the majority of respondents responded positively, with seven strongly agreeing and five agreeing. This shows that participants felt supported by both their home and host communities during challenging moments of cultural adaptation.

The pattern observed from the survey responses **“What is the most significant thing you learned about Turkish culture, and how has it changed your perspective?”** indicates that many participants found Turkish openness and hospitality to be significant aspects of the culture that impacted their perspectives. Participants often noted how Turkish people displayed kindness, respect, and warmth, even toward strangers, which shifted their views on interpersonal relationships and cultural values.

The participants’ answers highlight how Turkish culture, particularly its emphasis on hospitality, openness, and secularism, had a profound impact on their perspectives. For instance, MFANR’s experience with the local students’ willingness to help and provide support, even to strangers, demonstrates how deeply ingrained the value of hospitality is in Turkish society. This experience not only helped MFANR overcome social challenges but also led to personal growth in social skills, making it easier to build friendships. Similarly, AAI noted how Turkish professors and peers were open to hearing diverse perspectives, showing a level of tolerance and understanding that fostered a more inclusive environment. This openness toward others, particularly foreign students, left a positive impression on AAI, influencing their view on how academic and personal needs can coexist harmoniously.

Datum 9

MFANR: *“Hospitality when I was there, I had a lot of local students come to help me when I had some struggles. They help me with everything when I had a crisis, they hand out free food to me, and I even made friends with a local student whom I had just met 2 days before [...] it made me become more hospitable to a lot of people too.”*

Datum 10

AAI: *“Being open. As far as I know, people that I met in METU are really open to perspectives. Especially my lecturer; they always ask about foreign student perspectives about things [...] their tolerance about students’ needs, since life is not just about studying but we also have another life aspect that will affect our study.”*

This pattern likely arises because Turkish culture places a strong emphasis on hospitality, community, and respect for others, which can be particularly striking for international students coming from different cultural backgrounds. Turkish people often display warmth and helpfulness, especially to newcomers, which can stand out as a distinct contrast to the social norms that participants may be used to in their own countries. For example, in more hierarchical or reserved cultures, building friendships or receiving assistance from strangers might be less common or require more formality, but in Turkey, participants experienced a more spontaneous and open approach to social interactions.

This exposure to a more communal and caring environment likely changed their perspectives on how relationships can form quickly and how openness to new people and ideas can foster strong connections. Participants not only observed this kindness but often internalized it, becoming more hospitable or open themselves. This type of cross-cultural learning reflects the deeper impact that immersion in another culture can have on personal growth and worldview.

The pattern observed in the responses to the question about **“In what ways have you changed as a person after completing your exchange program in terms of cross-cultural understanding?”**. This increased awareness of diversity, coupled with personal growth in confidence and understanding of their own cultural identity, seems to be a common theme. Participants often mentioned how the experience broadened their worldview, helping them become more accepting of differences and less judgmental.

The participants’ answers reveal significant personal growth in their ability to navigate and appreciate cross-cultural interactions. AAI highlights how the exchange fostered excitement about exploring other cultures and underscored the importance of language in cultural understanding. This newfound openness and respect for differences reflect a deep shift in perspective, where interacting with diverse people challenges pre-existing notions and broadens horizons. Similarly, ITM reflects on how living as a minority, but not facing discrimination, helped develop a sense of tolerance. This suggests that the experience of being in a foreign environment, where participants were the “outsider,” contributed to their ability to empathize and appreciate diversity without feeling marginalized.

Datum 11

AAI : *“Become more open-minded toward differences. More exciting to explore other culture, and realize how important to learn another language in order to understand other culture. Also, this experience taught me how to respect other people no matter how different we are.”*

Datum 12

ITM: *“I feel like I’ve become a more tolerant person overall. This experience allowed me to understand what it feels like to live in a country where I’m a minority without feeling discriminated against.”*

The shift in perspective likely occurs because participants are placed in unfamiliar cultural contexts where they must adapt to new social norms, values, and languages. This process often forces individuals to reconsider their own biases and assumptions about other cultures. Additionally, being in a minority position or interacting with people from diverse backgrounds allows participants to experience what it feels like to be different, cultivating empathy and understanding. This exposure to diversity helps foster a greater appreciation for cultural differences and contributes to a more open-minded worldview, as seen in many of the participants’ reflections. The experience of living abroad tends to strip away preconceived notions and encourages personal growth in both confidence and cultural sensitivity.

A common pattern that emerged from participants’ responses regarding **“How did you interact with local Turkish students and community members? Were there any particular challenges or rewarding experiences?”** were addressed. Many participants found the lack of English proficiency among Turkish locals to be a hurdle, which made communication difficult, particularly outside the university setting. However, those who made efforts to learn basic Turkish or engaged with locals through shared activities, such as student clubs or dormitories, found these efforts highly rewarding, leading to deep cultural exchanges and friendships.

For example, MRRP highlighted the importance of learning the Turkish language to integrate into the local society, describing it as both a challenge and a key to successful interaction:

Datum 13

MRRP : *“The key to adapting to the local environment is learning their language, even at a very basic level [...]we need to learn their language at a very basic level just so they understand that we are respecting their language and are trying to adapt.”*

This shows that many students felt they needed to bridge the language gap in order to be fully accepted and understood within the community. On the other hand, NFF faced difficulties because of cultural differences and initial negative impressions, but found the experience rewarding after meeting locals through friends:

Datum 14

NFF : *“I think the best interactions I had with the local students were people I met through friends [...]they were very welcoming. It was very rewarding [...]if it wasn’t for them, I would have thought that Turkish people were just rude.”*

NFF’s experience underscores how connections through mutual friends helped overcome initial challenges, revealing the warmth of the local community after the

initial friction caused by differences in behavior and communication styles. The difficulties can largely be attributed to cultural differences and language barriers. Turkey, being a non-English-speaking country, poses communication challenges for international students, particularly outside academic environments where English is less prevalent. Moreover, cultural nuances, such as different social behaviors and expectations regarding noise, personal space, or food, contribute to the initial disconnect experienced by the participants. However, once participants became more familiar with local norms or put in efforts to communicate in Turkish, these challenges often turned into opportunities for deeper cultural immersion and personal growth.

Other participants, like CNP, also emphasized the unexpected isolation or awkwardness they felt when joining student activities, where local students were not accustomed to international participants. Despite these initial setbacks, acts of kindness from locals, such as translations or food-sharing, were common experiences that helped overcome cultural boundaries and build meaningful connections. This suggests that mutual curiosity and openness were key factors in fostering successful cross-cultural interactions among participants.

Datum 15

CNP : *“I joined several student activities—about three. One was a Formula 1 community, but I didn’t participate much after the first event. When I first joined, I didn’t feel very welcome because they weren’t expecting international students. Everyone stared, and it seemed like they were bothered by having to use English. But one person helped translate presentations for me, and he was very kind. I also joined a horse riding society, and while they also didn’t expect international students, they were more welcoming. They presented in Turkish but promised to talk privately afterward to answer questions. They talked for over an hour, so we just asked what we needed to know, like what we’d be doing and how much the activities cost. It was similar across student”*

Reintegration to Home Culture

Reintegration, following an international exchange, involves the process of readjusting to one’s home culture after immersion in a different cultural environment. This phase often includes deculturation, where individuals must let go of certain behaviors and norms adopted during their time abroad and reacquaint themselves with the customs and expectations of their original culture. This transition can trigger reverse culture shock, a phenomenon where individuals experience difficulties adapting back to their home environment after having been exposed to a different culture (Ward, Bochner, & Furnham, 2001).

Reverse culture shock occurs when individuals face challenges in readjusting to their home culture’s norms and routines, which can feel unfamiliar or even uncomfortable after an extended period away. According to a study by Oberg (1960), this experience can include feelings of frustration, confusion, and disorientation as one re-navigates familiar environments that now seem altered due to new cultural perspectives gained abroad. The process of reintegration often requires individuals to reconcile their

changed worldview with their home culture's values and expectations, creating a complex adjustment period that is crucial for successful reintegration (Black & Gregersen, 1999). Understanding reintegration involves recognizing that returning home is not just a physical relocation but also a significant emotional and cognitive transition, requiring individuals to balance new cultural insights with their pre-existing cultural identity.

Chart 10.

For the last statement, “My return to Indonesia has been smooth, and I feel that I have successfully reintegrated into my home culture,” six participants agreed, and two strongly disagreed, indicating that the majority had a smooth reintegration into Indonesian culture, although a small number experienced challenges.

The short answer survey responses on “**Upon returning to Indonesia, how have you been able to apply what you learned during your exchange? Have there been any challenges in readjusting to your home culture?**” reveal several recurring themes related to participants’ experiences of readjusting to their home culture after their exchange program in Turkey. A prominent pattern is the occurrence of reverse culture shock, where many participants struggled to adapt to the slower pace of life, different social norms, or less stimulating environments in Indonesia compared to their vibrant experiences in Turkey. This reverse culture shock is often compounded by the emotional challenge of missing the dynamic academic and social environment they enjoyed abroad. Another common theme is the application of enhanced work ethic and academic habits learned during the exchange. Participants frequently reported improved study methods, punctuality, and diligence, which they found beneficial upon returning to their academic or professional pursuits in Indonesia. Despite these positive changes, the emotional impact of returning home has been a significant hurdle for many, with feelings of nostalgia and sadness about the end of their time in Turkey.

Datum 16

DAR: *“I still miss Turkey especially the academic environment there. Because I think here, we are very not very, but at least we are still conventional, and even the*

perspective is not as wide as I experienced before. [...] So, the thing is I feel like I am being more respectful in a good way. [...]"

Datum 17

ITM: *"I learned to be punctual in every situation, and this was a good thing because in Indonesia, we have to admit that being late is quite common. [...] And as for challenges, I think I haven't faced any so far except feeling sad because I miss my time in Turkey so much, and I want to go back to Turkey."*

The responses indicate that while the exchange program in Turkey offered valuable personal and professional growth, the transition back to Indonesia has its own set of challenges. Participants have reported significant improvements in their work ethic and academic habits, which they attribute to their time abroad. However, the adjustment to the slower pace of life and less stimulating academic environment at home has proven to be difficult. Emotional struggles, such as missing the vibrant social and academic life of Turkey, are also prevalent. These insights suggest a complex interplay between the positive impacts of the exchange and the difficulties of re-integrating into a familiar yet altered environment.

Conclusion

The IISMA 2023 program at Middle East Technical University (METU) provided a profound cross-cultural and academic experience for Indonesian students. Throughout the exchange, participants faced a range of challenges, particularly with adjusting to Turkish cuisine, language barriers, and differing social norms. However, these difficulties were not only met with resilience but also became key drivers of personal growth and cultural understanding. From an academic perspective, the differences between Indonesian universities and METU were clear. The heavy emphasis on critical thinking, open discussions, and frequent academic evaluations at METU challenged participants, pushing them to adapt to a more rigorous learning environment.

These experiences honed their academic capabilities and helped develop valuable skills like independent learning, research proficiency, and public speaking. Culturally, participants gained a deeper understanding of Turkish society, particularly its blend of secularism and Islamic traditions. The respect for historical figures, the warmth of Turkish hospitality, and the country's openness to international perspectives left a lasting impact on the students. This cultural immersion fostered a heightened sense of global citizenship and empathy towards cultural differences. On a personal level, the exchange facilitated the development of self-awareness, confidence, and cross-cultural competence. Many participants expressed how the experience broadened their worldview, instilling a newfound openness to diversity and reinforcing the importance of tolerance and understanding in a globalized world.

In summary, the IISMA 2023 experience at METU was transformative. It not only provided students with academic enrichment and a broader cultural perspective but also contributed to their personal and professional growth. The skills and knowledge gained through this program are likely to have a lasting impact on their future careers and their ability to navigate an increasingly interconnected global environment. The program

emphasizes the power of international exchanges in fostering cross-cultural understanding, personal development, and the ability to thrive in diverse, multicultural settings.

ABSTRACT

This paper explores the significance of perception in Deb Olin's flash fiction entitled *Likable*. Perception of the world is shaped by humans' bodies, as stated by Maurice Merleau-Ponty. This story is about a woman's struggle with being perceived as likable in her old life. It highlights her self-awareness of how her actions and words are seen by others and her desire to be liked. Through a qualitative method, this fiction explores the tension between perceived authenticity and genuine contentment alongside the social and emotional difficulties of people's expectations. The story illustrates the complexity of interpersonal acceptance and how even small perception shifts can significantly affect one's authenticity and happiness. In conclusion, *Likable* emphasizes the importance of perception in interpersonal relationships and how subtle shifts in perception can have significant implications for one's likability and happiness.

Keywords *Deb Olin Unferth, Likable, Maurice Merleau-Ponty, Phenomenology of Perception*

Introduction

Likable is Deb Olin Unferth's story about a woman's struggle with being perceived as likable in her daily life. She becomes increasingly aware of how her actions and words are seen by others and her desire to be liked (Unferth, 2012; Gallagher, 2022). However, no matter what she does, her actions are always perceived as unlikable, whether she is talking to strangers, people she loves, or people she wants to be friends with. With increasing age, she grapples with the idea that her actions may be perceived differently compared to when she was younger. However, when she tries to modify her behavior, she eventually grows to realize the futility of her efforts. From that background, it is clear that her and others' perceptions mingle each other and shape her condition of being likable or unlikable (Unferth, 2012; Gallagher, 2022). This paper would like to answer the question of how power of perception is underlined in Deb Olin Unferth's *Likable*.

This study demonstrates the complex interplay between perceived authenticity, social acceptance, and happiness in such brevity of flash fiction written by Unferth (Wijaya, et al., 2024). It brings to light the struggle that many individuals face in trying to strike a balance between staying true to their authentic selves and conforming to societal norms (Cavaleri, 2023; Hamdani, et al., 2023). This article then also emphasizes the importance of understanding and respecting personal boundaries. It is always crucial in recognizing the importance of social connection and the impact that it can have on an individual's sense of self (Kinkaid, 2020; Ratcliffe, 2020). Through the exploration of these themes in this story, the researchers highlight the power of perception in shaping her daily experiences and relationships.

Method

By employing a qualitative methodology, this paper examines specific concepts and written data in order to address the research question. Adopting an exploratory approach, the analysis draws upon both online and offline sources to elucidate the correlations between Deb Olin Unferth's work of *Likable* and Maurice Merleau-Ponty's phenomenology of perception, while also considering relevant literary concepts and existential ideas. The online and offline materials, derived from various books and journals, are crucial for comprehending the issues at hand. The process of data analysis entails sourcing relevant materials, carefully studying them, comparing them with other relevant matters, incorporating pertinent quotations into the paper, and documenting them in the reference lists. The research data is derived from Unferth's short story as well as Merleau-Ponty's arguments, with each being thoroughly examined and dissected into its constituent elements. The plot and setting of the short story play a pivotal role in conveying the struggles of the characters to be likable, while the premises and reasoning employed in Merleau-Ponty's ideas serve to underscore the influence of perception. In this particular instance, the focal point lies in the flash fiction composed by Unferth, serving as the object of study. In contrast, the notion proposed by Merleau-Ponty functions as a means by which to examine and dissect the aforementioned short story.

Findings and Discussions

Being Likable and Unlikable in Ferth's *Unlikable*

Likeable by Deb Olin Unferth that tells about a 41-year-old woman who is becoming aware that she is being perceived as less likable by those around her (Unferth, 2012; Thorburn & Stolz, 2020). Each time she speaks, she says something that makes the people around her like her a little less needed in this flash fiction. The protagonist's inner dialogue is particularly striking, as she describes her feelings of frustration and disappointment in her inability to connect with others (Cavaleri, 2023; Hamdani, et al., 2023). In a sense, it is her own perception that talks like that. In other sense, what she thinks could also reflect the reality of what other people perceive about her.

The quotations below highlight her self-awareness and her increasing realization of her own unlikeability:

Data 1

"She could see she was becoming a thoroughly unlikable person." (Unferth, 2012).

The quotation shows that the protagonist is becoming aware that her actions or behavior are causing her to be perceived as less likable by those around her. It shows how her consciousness is aware that she is in a process of herself being unlikable (Unferth, 2012; Thorburn & Stolz, 2020). In this case, being unlikable could fall into varied categories. She does not really define what it is, but it is clear that her weights of perception do not consider merely the perception, but also from where the perceptions may come.

Data 2

"Each time she opened her mouth she said something ugly, and whoever was nearby liked her a little less." (Unferth, 2012).

She is aware that her words and actions are having a negative impact on her relationships with others. She is not always expressing herself in a way that is constructive or kind, and that it is causing others to view her in a negative way. Opening her mouth is not merely about talking since it could also symbolize any action done in every way (Unferth, 2012; Thorburn & Stolz, 2020). If she does anything not good then people will directly think that she should be avoided. In other words, she realizes that the perception of becoming unlikable is due to her own cause.

Data 3

"These could be strangers, these could be people she loved, or people she knew only

slightly whom she had hoped would one day be her friends.” (Unferth, 2012).

She has a hard time connecting with others, whether they are strangers or people she cares about. Her relationship with them is only negatively affecting her situations with them. She is struggling to forge connections and build meaningful relationships with others and that she might be pushing people away by saying and doing things that are causing others to view her in a negative way. It is crucial to see how Unferth mentions everyone near the main character (Unferth, 2012; Käufer & Chemero, 2021). It is used to underline how the condition is completely severe since no one really likes the main character at all.

Data 4

“Even if she didn't say anything, even if all she did is seem a certain way, have a look on her face, or make a soft sound of reaction, it was always unlikable—except in the few cases that she fixed herself on being likable for the next four seconds (more than that was impossible) and sometimes that worked, but not always.” (Unferth, 2012).

She is aware that her words, actions, and even facial expressions can impact how others perceive her. She struggles to be liked by the people around her and tries to control how she acts and what she says in order to come across as likable (Unferth, 2012; Käufer & Chemero, 2021). She tries hard to be likable but sometimes it is too much work, and so she ends up coming across as unlikable in the eyes of others. Unferth implies that the situations within the main character are quite complex. She would like to be likened but she avoids being likened (Unferth, 2012; Käufer & Chemero, 2021). She wants more attention from others but she could not suit herself in the society well enough.

Data 5

“Why couldn't she be more likable? What was the problem? Did she just not enjoy the world anymore? Had the world gotten away from her? Had the world gotten worse? (Maybe, probably not. Or probably in some ways but not in the ways that were making her not like it).” (Unferth, 2012).

She is quite aware that even her slightest actions or reactions can impact how people perceive her, and she wonders why she cannot seem to do better in social situations (Akbar, et al., 2023; Merleau-Ponty, 2002). She questions whether it is her own lack of interest in the world around her that is causing her disconnection, or if the world itself has changed in a way that makes it harder to relate to (Unferth, 2012; Käufer & Chemero, 2021). This introspection highlights the character's longing for connection

and her desire to understand why it has been so difficult to build meaningful relationships with others.

Data 6

“Did she not like herself? (Well, of course she didn't, but there was nothing new in that.)”
(Unferth, 2012).

She is aware that she does not like herself and that it is not a new feeling for her. She seems to have accepted the fact that she does not like herself and does not see it as something unique or unusual for her. This quotation reflects on her own thoughts about herself. She even could not deal with her own self that later shapes her bad thoughts against other people (Unferth, 2012; Käufer & Chemero, 2021). It could be said that her authenticity is doubted for so long but she could never find the best space and place to suit herself in the society where she lives.

Data 7

“Or had she become less likable simply by growing older—so that she might be doing the same thing she always did, but because she was now forty-one, not twenty, it had become unlikable because any woman doing something at forty-one is more unlikable than a woman doing it at twenty?” (Unferth, 2012).

She is wondering if she is becoming more unlikable as she ages, and if the things she always did are now seen as unlikeable simply because she is older. She is trying to figure out whether the world has changed and people's expectations have changed with it, or if it is simply because she is now older and the things she does are no longer considered acceptable (Unferth, 2012; Käufer & Chemero, 2021). Unferth underlines that the question is not easy to be answered. It is since the character has born the problem for a long time. The symptom has become the disease itself since it is not well-handled from the beginning (Akbar, et al., 2023; Merleau-Ponty, 2002).

Data 8

“And does she sense this? Does she know she is intrinsically less likable and instead of resisting, does she lean into it, as into a cold wind?” (Unferth, 2012).

She is aware that she is less likable and she accepts it as a part of who she is, similar to how people accept the cold wind that cannot be controlled (Unferth, 2012; Käufer & Chemero, 2021). Instead of fighting against it, she leans into it and accepts it as a natural part of her. Similar to the cold wind, someone may ignore it but still the shiver still comes being felt by the nerves. She would like to forget about it, but she could not do otherwise since she has been alone all this time. She could not kill her own curiosity

in being unlikable by other people (Heinämaa, 2021; Pasopati, et al., 2024). Meanwhile, she resists doing anything better to change her own perspectives on other people and even vice versa as well.

Data 9

“Maybe (likely) she used to resist, but now she sees the futility, so each morning when she opens her mouth she is unlikable, proudly so, and each evening before sleep she is unlikable, and each day it goes on this way, she getting more unlikable by the hour, until one morning she will be so unlikable, inconveniently unlikable, that she will have to be shoved into a hole and left there.” (Unferth, 2012).

She has become increasingly unlikeable and that she has given up on trying to change her unlikeable traits. She has come to accept her unlikeable traits as part of her identity, and even takes pride in them (Unferth, 2012; Käufer & Chemero, 2021). As a result, she believes that one day people will find her so unlikeable that they will have no choice but to leave her alone. The main character then could not leave from her own hole. It is in line with what Nietzsche says about gazing at the abyss. The character gazes at the abyss for too long and it makes the abyss gazes back at her (Heinämaa, 2021; Pasopati, et al., 2024).

Merleau-Ponty's Phenomenology of Perception and Its Continuance

Perception is how someone understands and sees the world around them. It is not just about the physical process of seeing, hearing, or feeling; but it is also about how the brain processes and makes sense of that information. According to Merleau-Ponty, people's perception of the world is shaped by their embodiment, which means that the physical body is not separate from the world, but is intimately connected to it (Heinämaa, 2021; Pasopati, et al., 2024). Human's bodily perception is not just an object in the world, but is also a subject that actively interacts with it. This means that perception of the world is always shaped by personal experience, emotions, and cultural background. This dynamic nature of perception sets the stage for a deeper exploration into how it intertwines with power dynamics, shaping and being shaped by the social structures in which all human beings exist (Anadza, et al., 2023; Belk, 2013; Merleau-Ponty, 2002).

In everyday life, when people meet and talk with others face-to-face, it is like having a shared moment where they express themselves through smiles, frowns, and gestures (Anadza, et al., 2023; Kinkaid, 2020; Ratcliffe, 2020). This direct interaction makes the other person's thoughts and feelings clear, creating a special closeness that no one else gets in other types of social encounters. Meeting someone in person makes them feel more real compared to hearing about them or talking through letters or messages. In this

case, perception is about direct encounters (Anadza, et al., 2023; Kinkaid, 2020; Ratcliffe, 2020). It does not happen inside one's mind, but it relates to all senses in understanding the other parties as well.

When someone meets other people face-to-face, her/his expressions and actions continuously affect each other. It is like a dance in which both parties respond to each other in real-time (Kinkaid, 2020; Ratcliffe, 2020). This makes the experience of the other person very real and significant in the experience of daily lives. Trying to force certain behaviors or misunderstandings in these situations is hard because the evidence of the other person's feelings is right there in front of the other person. This is what Merleau-Ponty states with being real, that is what people understand through their senses by being in reality (Kinkaid, 2020; Merleau-Ponty, 2002).

Furthermore, phenomenology of perception does not only move through human bodies, but also the language of bodies against the perceptive world (Cavaleri, 2023; Hamdani, et al., 2023). Language plays a crucial role since it acts as a unique set of signs, able to be separated from the current moment and the immediate situation. Language allows people to share thoughts to make them more aware of their own thoughts and feelings. How people express themselves, the signs they leave behind, and the language they use all contribute to the rich tapestry of everyday experience (Gilani, 2014; Berger & Luckmann, 2023). This interplay between expression and language shapes the perception of the world to share it with others.

Moreover, perception is never neutral, but power-related. The intersecting dynamic of perception and power touches social justice issues, with marginalized groups experiencing their experiences and perspectives rendered anyone who flourishes influence (Gilani, 2014; Berger & Luckmann, 2023). Dominant narratives, shaped by those with influence, can reinforce stereotypes and inequalities. Recognizing this relationship is essential for fostering critical thinking and promoting a more inclusive and equitable society. This involves questioning dominant narratives, understanding power structures, and seeking alternate perspectives (Akbar, et al., 2023; Merleau-Ponty, 2002). In doing so, people can become more aware of the forces shaping their perception and seek a more nuanced and just understanding of the world.

When it comes to understanding people's perception of their environment, the phenomenology of perception is more than just exploring the nature of consciousness or mental experiences. It goes into the complex details of temporal concepts like time, freedom, self-awareness, and the ability to perceive other people (D'Angelo, 2020; Jacobson, 2020). Through the process of comparing one's own image with that of other groups, individuals gain an understanding of the social perception surrounding their own groups. These socially constructed identities serve to reciprocally shape, strengthen, and establish a sense of normalcy among one and also another. Perception is about image (Akbar, et al., 2023; Merleau-Ponty, 2002). How people see the world is not just about five senses, but also influenced by feelings, experiences, and cultural relations.

Language of Being Unlikable in *Likable*

This flash fiction of *Likable* explores how the perception of a 40-year-old woman changes when she starts to act like she did when she was younger (Unferth, 2012; Käufer & Chemero, 2021). Merleau-Ponty's phenomenology of perception signifies how people see her actions and how their perception changes over time (Akbar, et al., 2023; Merleau-Ponty, 2002). The story looks at the details of how people view her. It shows how her actions may seem less likable to others as she gets older. In reverse, what other people perceive on her also affects what she understands about her conditions (Merleau-Ponty, 2002; Akbar, et al., 2023).

In the opening lines, the protagonist observes a transformation in her likability. The story suggests that every action, word, or expression becomes tinged with unlikability, raising questions about the nature of perception with age. This story shows the protagonist trying to understand why people no longer like her actions, even though she is not doing anything different than she used to (D'Angelo, 2020; Jacobson, 2020). Throughout the story, the protagonist grapples with comprehending why her behavior, which once seemed trivial, is now controversial.

The Data 1 shows how she actually understands that she becomes less likable. Her perceptions become more real when she senses any change surrounding her. Everyone seems not to care about her. Even if she does something, no one thinks that it is a good thing to do (D'Angelo, 2020; Jacobson, 2020). In this sense the perception that she feels is singular; that is being unlikable. However, she wishes to be more likable, but she becomes in reverse. What she thinks is always bad in her perspective; therefore her world also becomes similar to that. The scene then reflects matters of perception in which its powerful impact may affect someone's perspectives (Unferth, 2012; Käufer & Chemero, 2021).

In Data 2, the narrative paints a picture of her perception, reflecting societal judgments as her speech mirrors these views. The idea that every time she speaks, something unpleasant is said aligns with the ever-shifting nature of perception, showing how words affect the judgments of those around her (D'Angelo, 2020; Jacobson, 2020). Furthermore, the notion that those nearby gradually like her less with each spoken word resonates with the idea that humans' bodies act as channels through which individuals typically interact with the world. Then, it is also showcasing the real impact of spoken words on relationships (Gilani, 2014; Berger & Luckmann, 2023).

Data 3 points to the complete aspects of anyone who the main character faces every day. It starts from the smallest scope of anyone she loves, anyone that she hopes to be her friend someday, to complete strangers (Unferth, 2012; Käufer & Chemero, 2021). The sentence is not merely showing the situation of herself being likable by many people. It also shows how she perceives the world and vice versa. She actually has company, but she always feels alone. Her world has become smaller than ever. In this sense, the perceived world of hers is also changing from being good to worse than before (Merleau-Ponty, 2002; Unferth, 2012).

Data 4 focuses on how Unferth contrasts the word of unlikable and likable. Indeed, it triggers such understanding whether the condition of the main character is one or

another (Merleau-Ponty, 2002; Unferth, 2012). If she is unlikable, she desires being likable, and vice versa. If she is actually likable, the passage shows that she always shows that she is unlikable. The tension of them both underline that being positive and negative is so common in matters of perception (Merleau-Ponty, 2002; Akbar, et al., 2023). Being nice and bad is somehow a matter of perception in which it works like two sides of a coin. The reality is singular, but not with the perception that may always vary depending on experience of everyday life. This is what the main character feels in the passage of Unferth.

In Data 5, the question explores the internal struggle of self-perception, emphasizing the idea that perception is not solely shaped by external judgments (Unferth, 2012; Käufer & Chemero, 2021). It emphasizes the intricate relationship between self-perception and external influences. The protagonist's introspection aligns with Merleau-Ponty's exploration of personal experience shaping self-perception, asking if she no longer enjoys the world, reflecting the complex connection between personal experience, self-view, and the ideas presented in the theory section (Belk, 2013; Hopp, 2020).

Data 6 emphasizes how nothing really changes in her life. She still lives the conflicts she used to face. She also still is the one that hates herself. At this point, she keeps prolonging the perception of herself being hated (Merleau-Ponty, 2002; Akbar, et al., 2023). She may not really hate herself, but she is always being hateful to anyone. Then, she realizes that the hate has been herself for so long. She could not leave and even escape from any of that. This is the beginning and the end of her former and latter perceptions of her own world (Merleau-Ponty, 2002; Akbar, et al., 2023).

In Data 7, it underlines Merleau-Ponty's idea that perception is influenced by cultural norms and societal constructs, particularly regarding age (Merleau-Ponty, 2002; Unferth, 2012). The consideration that the same actions may be perceived differently based on age aligns with societal views on appropriateness and acceptability, reflecting the evolving nature of perception influenced by cultural expectations (Belk, 2013; Hopp, 2020). She could not blame anyone anymore of herself being likable or unlikable. Now, she could only point to her age as the main cause of her unlikability.

Data 8 indicates that the narrative captures the woman's journey from resisting the perception of being unlikable to embracing it proudly. This shift aligns with Merleau-Ponty's concept that perception can change and emphasizes the dynamic nature of self-perception (D'Angelo, 2020; Jacobson, 2020). The woman's acknowledgment of the futility of resistance and her choice to be unlikable deliberately resonates with the notion of negotiating between societal expectations and individual authenticity of everyday conceptions (Merleau-Ponty, 2002; Akbar, et al., 2023).

In Data 9, in the phrase when she resists her condition reflects the acceptance of societal perceptions and aligns with the ongoing negotiation between individual authenticity and societal expectations. The narrative captures the evolving nature of self-perception, emphasizing that embracing authenticity, even if it defies societal norms, can be a liberating choice (Belk, 2013; Hopp, 2020). What she perceives has become something redundant for her. It is already pointless for her to think about it anymore. Then, she surrenders to others' perceptions of her. She could not even decide whether she is likable or unlikable anymore.

Conclusion

Deb Olin Unferth's *Likable* is a story of a woman who feels others are starting to not like herself as much. Every time she speaks or reacts, it seems to make her less likable to those around her. The story shows how her perception of herself and how others perceive her are intertwined. Every action she takes seems to make her less likable, it raises the question of whether something has changed or if she is just becoming more aware of societal norms as she ages. The story aligns with the remarkable postures of phenomenology of perception by Merleau-Ponty that perception is not fixed and can be influenced by experiences, feelings, and culture. In this case, societal expectations and the woman's self-acceptance play a role in shaping how she is perceived. *Likable* challenges the readers to reconsider the concept of likability, highlighting how it is a complex interplay between the self and societal norms that changes over time, including to the idea of being unlikable as well.

Abstract

This study aims to identify the professional development needs of English teachers teaching vocabulary in Lubuklinggau. It explores the challenges faced by teachers in vocabulary instruction and investigates the specific areas where they require further training and support. This research was designed qualitatively with a descriptive approach. The subject was four English teachers who teach at junior high schools, both state and private. The data was collected through an open-ended. By understanding the teachers' perspectives and needs, this research seeks to inform the development of targeted professional development programs to enhance vocabulary teaching and learning in the region. The findings of this study highlight the importance of providing teachers with adequate resources, training, and support to enhance their vocabulary teaching practices.

Keywords: *professional development, English teachers, vocabulary teaching, Lubuklinggau*

INTRODUCTION

Professional development is essential for educators, as it has a direct impact on the quality of education and student outcomes. It entails continuous learning opportunities that assist educators in improving their teaching abilities, maintaining a current understanding of educational trends and standards, and updating their knowledge base. Effective professional development can result in substantial enhancements in student achievement and teaching practices, as per Darling-Hammond et al. (2017). This is due to the fact that it enables educators to continuously enhance their instructional strategies, incorporate new technologies into their classrooms, and implement innovative teaching methods that are customised to meet the unique learning requirements of their students.

Additionally, educators are encouraged to cultivate a culture of collaboration and continuous improvement through professional development. It fosters the exchange of best practices, which can motivate educators to experiment with novel methods and customise them to their distinctive classroom environments. As Guskey (2002) observes, teachers' job satisfaction and retention are improved as a result of the confidence and competence that sustained professional development builds in them. Professional development is especially important for English teachers, as it provides them with the most up-to-date pedagogical techniques and language proficiency skills necessary to effectively teach English as a second language.

Additionally, the implementation of new curricula and educational policies is facilitated by professional development. It guarantees that educators are adequately equipped to address the changing requirements of the educational system by furnishing them with the requisite resources and expertise. Borko (2004), for example, underscores the necessity of ongoing professional development to enable educators to adjust to new standards and assessment methodologies, thereby guaranteeing that their students receive an education that corresponds to contemporary academic standards.

The professional development of English instructors in Lubuklinggau is essential due to the distinctive obstacles they encounter in the region. A complex educational landscape characterised by varying levels of student proficiency and limited resources is the reality that English instructors in this location must navigate. Many English teachers in Lubuklinggau are experiencing difficulty in sustaining high teaching standards and enhancing student outcomes due to the lack of access to up-to-date teaching materials and professional development opportunities, as per a recent study conducted by Sari et al. (2023). This emphasises the necessity of professional development programs that are specifically designed to resolve these specific challenges.

Additionally, the multicultural and multilingual environment of Lubuklinggau introduces further obstacles. In addition to possessing sophisticated language skills, English teachers must also be equipped with culturally responsive teaching methods that can captivate students from a variety of backgrounds. Rahmawati and Wahyuni (2023) emphasise the significance of specialised training, as they discovered that professional

development programs that are customised to the local context significantly improve the efficacy of teachers and the engagement of students.

A collaborative endeavour from educational authorities and stakeholders in Lubuklinggau is necessary to address these needs. Comprehensive professional development programs that are both practical and pertinent can be developed through collaborative initiatives that unite educators, policymakers, and educational experts. Ultimately, these initiatives are essential for enabling English teachers in Lubuklinggau to improve their teaching practices and overcome their unique challenges, resulting in improved educational outcomes for their students.

The professional development requirements of English teachers, particularly in contexts comparable to Lubuklinggau, have been the subject of numerous studies. Research conducted by Guskey (2002) underscores the importance of effective professional development in the context of teacher growth and student achievement. The most significant benefits are derived from sustained and collaborative programs. This discovery is especially pertinent for English instructors in Lubuklinggau, who encounter unique obstacles that can be resolved through customised professional development initiatives.

Sari et al. (2023) conducted a study to investigate the professional development requirements of English instructors in rural Indonesia, which encompassed Lubuklinggau. The researchers discovered that a significant number of educators are unable to access professional development opportunities and up-to-date instructional materials. Their capacity to effectively engage students and implement contemporary teaching strategies is impeded by this divide. The research indicates that the effectiveness of teaching and the learning outcomes of students can be considerably improved through targeted professional development programs that concentrate on these areas.

Furthermore, Rahmawati and Wahyuni (2023) examined the influence of contextual professional development in multicultural environments. Their results suggest that professional development programs that take into account the local cultural and linguistic context are more effective in enhancing the instructional practices of teachers and the engagement of students. This study emphasises the significance of developing professional development initiatives that are tailored to the unique requirements and obstacles faced by English teachers in Lubuklinggau.

Additionally, Borko (2004) underscores the significance of ongoing professional development in the process of adapting to new educational standards and assessment methodologies. This is especially pertinent for English instructors in Lubuklinggau, who are obligated to remain informed about the changing curriculum requirements and teaching methodologies in order to guarantee that their students receive a high-quality education. The essential necessity of well-designed professional development programs that specifically address the unique challenges encountered by English teachers in Lubuklinggau is underscored by these studies. They serve as a foundation for the creation of effective strategies that will improve the educational outcomes of students and foster the professional development of teachers.

Despite the extensive examination of the general professional development requirements of English teachers in previous studies, there is a substantial research gap in the specific area of vocabulary instruction in Lubuklinggau. The research conducted by Sari et al. (2023) and Rahmawati and Wahyuni (2023) underscores the more extensive obstacles encountered by English instructors, including the necessity of culturally responsive teaching methods and access to resources. Nevertheless, these investigations do not provide a comprehensive examination of the precise strategies and professional development that are necessary for the effective instruction of vocabulary.

Vocabulary is an essential element of language acquisition, as it is essential for the development of reading comprehension, writing, speaking, and overall communication abilities. Despite its significance, there is a scarcity of research that specifically addresses the professional development requirements of English instructors in Lubuklinggau with respect to vocabulary instruction. The current body of research frequently generalises the professional development requirements without considering the distinctive pedagogical approaches and techniques that are essential for effectively teaching vocabulary.

Furthermore, the increasing emphasis on digital literacy and the integration of technology in the classroom, which is a result of the evolving nature of language education, requires specialised training for teachers to improve vocabulary instruction through the use of digital tools. The current body of research fails to adequately investigate the extent to which professional development programs can provide educators with the necessary skills to effectively employ technology in the instruction of vocabulary.

The influence of local linguistic and cultural contexts on vocabulary instruction is another area that has been inadequately investigated. Although Rahmawati and Wahyuni (2023) underscore the significance of culturally responsive teaching, there is a requirement for more focused research on the ways in which local languages and cultural nuances influence vocabulary acquisition and how teachers can be trained to effectively navigate these influences.

The purpose of this research is to thoroughly examine the professional development needs of English teachers in teaching vocabulary in Lubuklinggau, a city in Indonesia, by identifying specific challenges and opportunities for improvement. It aims to provide a comprehensive overview of the current state of English language education in the region, highlighting the unique obstacles that teachers face, such as limited access to resources, varying student proficiency levels, and the need for culturally responsive teaching methods. By exploring these issues in depth, the article seeks to underscore the critical importance of professional development in enhancing teaching practices and student outcomes.

RESEARCH METHOD

This research was designed qualitatively. According to Creswell (2012) qualitative research is a method for understanding the meaning individuals or groups give to a situation, focussing on the researcher's interpretation of data rather than relying solely

on statistical analysis. This approach involves an in-depth exploration of a phenomenon using non-numerical data like interviews and observations.

The subjects of this study were 4 English teachers who teach at public and private junior high schools in Lubuklinggau. They represent schools in each region. In order to collect data, the researchers created questionnaires that were adapted by several experts. To ensure the questionnaire, researchers asked the expert to validate it, and lastly, investigators shared an online questionnaire through Google Forms that continued to relate the professional development in teaching vocabulary.

After the data was collected, the researchers took steps in analysing the data as follows: 1) **Frequency Analysis** (This technique can be used to identify the most common professional development needs among the teachers); and 2) **Grouping Needs by Category** (Researchers create groups for each answer to each question. This makes it easy for researchers to analyse carefully).

FINDINGS AND DISCUSSION

1. Main Needs in Professional Development Related to Teaching English Vocabulary.

In teaching English vocabulary, there are several key needs for effective professional development. Firstly, adequate facilities are crucial. This includes access to well-equipped classrooms, multimedia resources, and modern technology that support interactive and engaging learning experiences. These are necessary for the effectiveness of vocabulary instruction to be improved.

Secondly, access to reputable resources like the Oxford Dictionary is vital. It provides authoritative definitions, pronunciations, and example sentences that are essential for teachers and students. A well-stocked library or digital access to such resources ensures that vocabulary instruction is accurate and comprehensive.

Thirdly, specialised training on the existing curriculum is necessary. Teachers need to be well-versed in the curriculum they are teaching to effectively convey the material. This includes understanding the pedagogical approaches that best support vocabulary acquisition and being able to adapt lessons to meet diverse student needs.

Lastly, having a diverse range of teaching materials is important. This includes textbooks, flashcards, visual aids, and digital resources that cater to different learning styles. A variety of materials ensures that vocabulary lessons are engaging and effective, helping students retain and use new words in context.

2. What is the significance of specialised training in vocabulary teaching for your professional development, and why?

Professional development necessitates specialised training in vocabulary teaching, as it directly improves the quality of instruction. Special training is considered to be of **paramount importance** to certain educators due to its provision of the most up-to-date teaching methods and techniques, which are indispensable in an educational

environment that is perpetually changing. Teaching methods are constantly evolving in response to discoveries, and it is imperative to remain informed through training to provide vocabulary instruction that follows elementary standards. Even for those who have **never participated in such training**. It is widely acknowledged that the objective of any professional development course is to enhance the capabilities of participants, regardless of whether they have previously participated in such training. The purpose of each training session is to equip educators with the necessary tools and strategies to enhance their teaching practices, thereby enabling them to adjust to new challenges in the classroom.

Furthermore, educators are **believed to require additional training to improve their expertise**. As the field of education continues to develop, educators must maintain a perpetually updated understanding of new methodologies and skills. This not only enhances the efficacy of their teaching but also fosters their professional development.

3. What type of training or workshop do you find to be the most effective in enhancing your vocabulary teaching abilities?

Various forms of training or workshops can be effective in enhancing vocabulary teaching skills, contingent upon the teacher's needs and experiences. Effective vocabulary instruction in schools is regarded as the most advantageous by certain educators. This type of training is highly pertinent and immediately useful because it offers practical strategies and approaches that can be directly applied in the classroom.

There is a perception that ideation sessions could be beneficial for individuals who have never participated in a workshop or training. These sessions enable educators to exchange ideas and identify innovative new methods of teaching vocabulary, thereby fostering a collaborative approach to problem-solving and innovation in teaching practices.

Others may find curriculum training and seminars on interactive teaching methods to be particularly effective. This training not only enhances teachers' comprehension of the curriculum they are teaching, but it also introduces interactive techniques that can enhance student engagement and make vocabulary learning more dynamic and pleasurable.

Lastly, seminars are also perceived as an effective method of professional development. They frequently feature experts who offer fresh perspectives and in-depth explorations of specific vocabulary teaching topics, thereby assisting educators in remaining informed about the most recent educational trends and research.

4. In what ways do you believe that continuous professional development can be used to address the challenges associated with vocabulary teaching?

To overcome vocabulary teaching issues, CPD is needed. CPD keeps instructors current on methodologies, resources, and research as teaching methods and needs change. Teachers can adjust to different student generations and learning styles by training regularly. CPD gives teachers real solutions to classroom issues. Participants

learn how to engage hesitant learners and differentiate lessons for students of varied competency levels after successful training.

CPD also helps adapt teaching methods to current educational trends. Generational learning preferences and needs change. Teachers receive ongoing training to adapt to these changes and keep vocabulary teaching relevant, engaging, and effective. CPD improves vocabulary teaching effectiveness and promotes educators' confidence in their capacity to overcome challenges, making it essential to professional progress.

5. Do you require assistance from colleagues or professional communities to enhance vocabulary instruction?

The support of colleagues or professional communities has a big impact on vocabulary instruction improvement. Ideas or collaboration are invaluable forms of support for many educators. Brainstorming facilitates the exchange of innovative teaching strategies and lesson plans among colleagues, which cultivates a creative environment that is beneficial to both students and instructors. Furthermore, facilities such as practice companions and dictionaries are highly regarded. To receive effective instruction, students must have access to resources such as exhaustive dictionaries and opportunities to practice using new vocabulary in context. Additionally, there is a strong consensus that it is imperative to assist in the process of becoming acclimated to the application of vocabulary across various disciplines. The application of vocabulary in a variety of contexts is furthered by the collaboration between English instructors and educators from other promotes interdisciplinary approaches to vocabulary development. Ultimately, educators' capacity to provide comprehensive and engaging vocabulary instruction is significantly improved by any form of support, including collaborative ideation sessions, access to resources, or interdisciplinary cooperation.

6. How Does Access to Current Books, Journals, and Online Resources Affect Your Vocabulary Teaching Professional Development?

Vocabulary teacher professional development requires current resources. These resources give teachers the latest information, ideas, and tools to use in class. Reading contemporary books, periodicals, and online platforms helps teachers improve their teaching and stay current.

These materials help some professionals flourish rather than drive it. They provide significant insights and ideas, but workshops and peer cooperation may enhance professional development. Students' knowledge is also affected by existing resources. With the latest tools and information, educators may better address students' needs and link vocabulary instruction with modern language use and educational requirements.

7. Is Mentoring Programs in Teaching Vocabulary for New Teachers Beneficial?

New vocabulary instructors benefit from mentoring programmes. They are crucial because they provide individualised support for new teachers' needs and challenges. Mentors provide advice, strategies, and guidance to novice teachers on classroom management and education.

Mentoring initiatives help new instructors adapt faster. These programmes help rookie teachers learn good teaching strategies and gain confidence by linking them with experienced mentors.

Mentoring programmes provide a friendly environment where new instructors can seek advice, reflect on their skills, and receive constructive feedback. This continual support improves professional development, retention, and job satisfaction for new instructors. Mentoring programs are essential to teacher induction and support because they improve new teachers' vocabularies.

8. Do You Need Vocabulary Teaching Technology Training? If so, what technologies do you want to learn about?

Technological training for vocabulary instruction is widely recognised by educators. Many believe such training is necessary to improve teaching and keep up with educational developments. AI-based vocabulary instruction is gaining popularity. AI is a strong vocabulary education technique since it provides personalised learning, adaptive tests, and automated feedback.

Some educators want to learn about VR and AI. VR immerses pupils in dynamic, language-rich worlds for realistic vocabulary drills. These technologies combined with AI can provide immersive and effective learning experiences.

Interactive game development is another passion. Learning how to build interesting vocabulary games helps raise student enthusiasm and retention. Most agree that training in these modern technologies may make vocabulary teaching more enjoyable, personalised, and effective.

9. How important do you think training in vocabulary evaluation and assessment strategies is to improve the effectiveness of your teaching?

Acquiring knowledge in vocabulary evaluation and assessment procedures is crucial for enhancing instructional efficacy. It empowers educators to comprehend the requirements of students, create focused teaching methods, assess advancement, amplify student involvement, assist a variety of learners, and consistently increase their teaching methodologies. Investing in this specific domain of professional development ultimately results in enhanced vocabulary instruction and improved educational outcomes for students.

10. What support from the school or education office do you need for professional development in vocabulary teaching?

The school or education office provides many types of support that greatly contribute to the professional growth of educators in vocabulary instruction. The availability of media, energy, and internet resources enables the utilisation of contemporary instruments and technologies. A setting that is conducive to learning in the classroom facilitates the implementation of successful teaching methods. Professional training is crucial for acquiring vital skills and information. Although certain educators may believe they do not require any extra assistance, continuous access to materials and

opportunities for development can always contribute to further enhancement. Each type of support focusses on distinct aspects of teaching and learning, and when combined, they assist educators in delivering vocabulary instruction of exceptional quality.

CONCLUSION

The survey results clearly indicate that teachers recognise a substantial requirement for professional development in the area of English vocabulary instruction. The results underscore the need of equipping educators with sufficient tools, training, and assistance to augment their vocabulary instruction methods.

Meeting these demands is essential for enhancing English language acquisition results among students. Through the allocation of resources and investment in teacher development, educational institutions have the ability to empower teachers to enhance their effectiveness in vocabulary instruction, which in turn can result in improved student academic performance.

Additional research is advised to further explore the specific difficulties encountered by instructors in teaching vocabulary and to assess the efficacy of various professional development programs.

SUPPORT

We would like to express our sincere gratitude to the Ministry of Higher Education for the support provided in the peak research on the fundamental scheme.

Abstract

In the research discourse for writing this article using dialectic, a critical analysis approach developed by Norman Fairclough (2018), this was done to examine how an article about Donald Trump's political agenda for his candidacy for president in 2025. The political agenda is called Trump and Project 2025. In writing this article, discourse was taken from 10 sources that discuss Trump's political agenda. Sources taken include CBS News, BBC, CNN, FORBES, Brookings, The 19th News, The New York Times, ABC News, ABC News, and The Washington Post. In writing this article, Fairclough's framework helps show how Project 2025's vision and mission are aligned with ethics and policies to unite its vision and mission for its candidacy for president in 2025. In this research, it can create a public perception that reflects power dynamics and even ideological conflict. so that people will believe that Trump's Project 2025 will be good for the US government.

Keyword: *Political agenda, power dynamics, project 2025*

Introduction

In recent years, the political landscape of the United States has been increasingly influenced by strategic policy initiatives that shape and reflect the ideological contours of contemporary governance. One such initiative is "Project 2025," a comprehensive conservative blueprint developed by the Heritage Foundation and closely associated with Donald Trump's political agenda. This policy document aims to provide a strategic framework for a potential second Trump administration, reflecting a vision of governance that is deeply rooted in conservative values and priorities.

The significance of Project 2025 extends beyond its policy proposals; it represents a broader ideological and strategic effort to influence the future direction of U.S. governance. As such, it becomes crucial to examine how this blueprint is represented and interpreted within the media. The discourse surrounding Project 2025 not only reflects but also shapes public perception and political narratives. Understanding how this discourse constructs power relations and ideological positions provides insights into the broader dynamics of contemporary American politics.

This study employs Norman Fairclough's theory of critical discourse analysis to explore the media portrayal of Project 2025. Fairclough's approach offers a framework for analyzing how language and discourse are used to construct and reflect social power and ideological positions. By examining articles from major news outlets such as CBS News, BBC, CNN, and The Washington Post, this research investigates how Project 2025 is framed within different media narratives and how these framings contribute to the construction of power dynamics and ideological conflicts in American politics. Through this analysis, the study aims to uncover how media discourse both reflects and shapes the political landscape, thereby enhancing our understanding of conservative strategies and their implications for U.S. governance.

Previous studies have analyzed the extensive use of speeches Norman Fairclough's 3-dimensional framework in critical discourse analysis (CDA), there remains a significant research gap in applying this theory to contemporary media contexts, particularly in the realm of social media (Priyana & Erlangga, 2022), Representation of Government concerning the draft of criminal code in the Jakarta Post (Sari & Pranoto, 2021), The attitude of Japanese newspapers (Puspita & Pranoto 2021). Revealing Masculinity Through L-Men Advertisement (Falaq & Puspita, 2021). However, there is a significant gap in the application of this model to international news, which is increasingly influential in shaping public perception regarding the relationship between Trump and Project 2025. Accordingly, this study examines the meaning and narrative that the media constructed about the relationship between Project 2025 and Donald Trump, and how it affects public perception.

Theory and Method

This research uses a qualitative approach with Fairclough's Critical Discourse Analysis (CDA) to understand and examine how Project 2025 is presented in international media. In a qualitative approach, it is very suitable to find out what the content of a news story is and is also able to explore how the meaning of news that has a good perspective will be conveyed to the general public, namely news readers. The author collects news from various international news media such as CBS News, BBC, CNN, FORBES, Brookings, The 19th News, The New York Times, ABC News, ABC News, and The Washington Post. This analysis will cover 3 aspects that are used to analyze a text and discourse. The first aspect is regarding textual analysis. Textual analysis focuses on elements of vocabulary, grammar, and sentence structure to understand how meaning is constructed in the text (Fairclough, 1992). For the next dimension, namely the second dimension, focuses on discourse practices, which explore how texts are produced, transmitted, and received by audiences, including the influence of social and political contexts on the way news is packaged and presented (Fairclough, 1992). The third dimension is social practice, which looks at how discourse reflects and shapes power and ideology in society, by assessing the impact of texts on wider social structures (Fairclough, 1992). By combining these 3 dimensions, we will gain insight into how the language of the media influences people's perceptions. By using Norman Fairclough's theory in Critical Discourse Analysis (CDA), the author can analyze how word choice, sentence structure and narrative used by international news media can influence public perceptions of a strategy and public trust. The authors chose Norman Fairclough's theory in Critical Discourse Analysis (CDA) because this approach helps us understand how language is not only used for communication but also to influence the way we perceive the world and understand social issues. In the context of Project 2025, the media plays a significant role in shaping public opinion about Trump and the project, especially as many factors indicate that Trump's supporting party in this presidential election leans towards conservative views. By using CDA, we can analyze how word choices, sentence structures, and narratives used by international media reflect power, ideology, and certain interests.

1. Textual analysis

Textual analysis in Fairclough's three-dimensional Critical Discourse Analysis (CDA) model includes modality, active and passive sentences, and nominalization to understand how these elements form meaning in the text. Modality is used to express meaning beyond the authority of the sentence through the use of modal verbs such as "may," "could," and "must," which convey a degree of certainty or obligation, thereby influencing how readers interpret the text and reflect on strategies of power or persuasion. Active and passive sentences also play an important role, active sentences highlight the perpetrator of the action, while passive sentences emphasize the action itself, thus influencing the way information is conveyed, especially in reporting. Fairclough (1989) explains that the choice between active and passive sentences can prioritize social actors or hide them from the reader's attention. Meanwhile, nominalization changes verbs or adjectives into nouns, which often serves to disguise the perpetrator of the action, as in the example "There was an attack on the rebels"

which hides the real perpetrator. This process, according to Fairclough, can obscure the responsibilities and social roles of actors in discourse, so that these elements as a whole allow researchers to identify hidden or implied meanings in a text.

2. Discourse Practice

Discourse practices refer to the way texts are produced, shared, and used in various contexts, including the processes of text production, distribution, and consumption, as well as how texts are published and interpreted by others. This part of Fairclough's model helps us understand how texts are influenced by social practices and how texts impact society. Production in Fairclough's discourse practice refers to the processes involved in creating texts, including the roles of individuals, organizations, and technologies, as well as how social norms, power structures, and institutional practices influence content creation. It also includes language selection, topic design, and target audience analysis. Text production is influenced by broader social, cultural, and economic contexts, which determine how meaning is encoded and interpreted by others. Distribution is the process of spreading a text so that it can be accessed by a wide audience, and factors such as the distribution reach and accessibility of the text also influence its distribution. Consumption relates to how readers or consumers of texts, in accordance with Fairclough's (1995) theory, engage with content, react to it, and how they capture and discuss the information obtained. Sociocultural Practices consider the relationship between social interactions and the social context in which they occur, including how social control influences the production and interpretation of texts. Fairclough (1995) emphasizes three main aspects: social, institutional, and situational, with a focus on situational aspects that explore the specific background and current circumstances that influence the topic under discussion. For example, in analyzing news coverage of the Papua conflict, we need to consider how the current political and social climate influences the depiction of the topic.

FINDING AND DISCUSSION

In analyzing the findings, the researchers divided the results into three main sections following Fairclough's three-dimensional model, which included textual analysis (explanation), discourse practices (interpretation), and socio-cultural practices (explanation).

Textual Analysis

Fairclough's approach involves detailed textual analysis to uncover meanings, assumptions, and power relations in discourse. This study scrutinizes how language in news articles represents Project 2025, its controversies, and its alignment with Trump's agenda, aiming to reveal the underlying power dynamics and ideological conflicts. This textual analysis takes 10 sources of international media articles which are processed into data. Data can be seen in the image below:

Chart 3.1 Nominalization - Individual

From this data, it can be seen that Donald Trump occupies the most mentioned position, 71 times, then the second most mentioned position is Paul Dans 21 times, and Kevin Roberts 12 times. Meanwhile, the next position is followed by Kamala Harris (4), Spencer Chretien (4), Chriss Miller (3), Russ Vought (3), Ben Carson (2) and Roger Severino (1).

Chart 3.2 Nominalization of Institutions

Based on the data displayed, the entity with the highest frequency of appearance is the Heritage Foundation with a value of around 52. Then followed by the Trump Administration with a value of around 34. Next, in order, namely, the Department of Health and Human Services (12), US Office of Personnel Management (9), Department of Homeland Security (8), FBI (6), CNN (2), Food and Drug Administration (2), Kamala Harris Campaign (1), Biden Administration (1), National Weather Service (1), and Affordable Care Act (1).

Nominalization

The use of nominalization in these articles can depersonalize actions, making them appear more neutral or inevitable, which can influence readers' perceptions of the conflict and the parties involved. The following is the use of the word nomination in several article sources.

Nominalization used by CBS News

Table 3.3 Nominalization used by CBS News

Words	Frequency
Transition	3
Enforcement	3
Overhaul	2
Support	1

In the table above there are words that can make readers feel that the vision and mission of the 2025 project will make a better change for the people and the US government in the future. Therefore, writers need to use the right words as above, which is very useful for getting influence from readers of the content.

Sample of nominalization data

Table 3.4 Sample of Nominalization Data

News Media	Clause
CBS News	But Democrats have continued to tie the transition project to Trump, warning that its policy proposals are what Americans can expect if they elect the former president in November
	...a secure border with increased enforcement of immigration laws, mass deportations, and construction of a border wall
	Overseen by the conservative Heritage Foundation, the <u>multi-pronged initiative</u> includes a detailed <u>blueprint</u> for the next Republican president to usher in a sweeping overhaul of the executive branch.
	...less federal intervention in education and more support for school choice; work requirements for able-bodied.

1. The first clause explains the word "transition" which explains that there will be changes. The word transition is used to describe a change from the current US government to the future US where Donald Trump is currently nominating as a future presidential candidate and will implement a new transition, namely Project 2025.
2. The second clause regarding this clause contains the word "enforcement" which covers several policies related to immigration control and border security. First, there are efforts to ensure the border remains secure by preventing the entry of illegal immigrants. Furthermore, immigration law enforcement was tightened with stricter inspections and legal action.
3. In the context of this sentence, the word "overhaul" means a major overhaul or complete refresh. The use of this word indicates that the initiative led by the Heritage Foundation aims to make significant and profound changes to the structure or function of government executive institutions.
4. In this sentence, the word "support" means support or assistance. Thus, the phrase "more support for school choice" refers to increased assistance or encouragement for more school options, such as school vouchers or alternative education options, to give parents and students more freedom in educational choices.

Modality

Modality refers to how language expresses the speaker's attitude toward the truth or certainty of a statement (Fairclough,1992). It uses modal auxiliary verbs like will, would, and could.

Table 3.5 Modality Auxiliary in International News Article

Auxiliary	ABC News	BBC	CNN	Forbes
Could	0	3	4	6
Will	0	2	6	5
Would	3	6	7	12

Based on the table, it can be seen that the auxiliary "will" was most frequently used by *Al Jazeera*, *The Jakarta Post*, and *BBC*, as it was used 3 times in total across these news articles. After the auxiliary "will," the journalists used the auxiliary "could" 4 times, which suggests possibility or potential future events. The third auxiliary that was used more often was "would," which appeared 2 times, reflecting hypothetical situations or potential outcomes.

The use of the auxiliary "will" indicates that the international news articles were focused on presenting future events or actions with certainty. It suggests that the media was aiming to portray upcoming developments with confidence, showing a stronger prediction or promise of future actions or results. "Could" adds a level of uncertainty or possibility, while "would" reflects hypothetical situations, which could suggest how things might have happened differently or what could have happened under certain conditions. This usage of modal auxiliaries highlights the different levels of certainty, possibility, and hypothetical scenarios being communicated by the international news media.

Table 3.6 Sample of Modality Data in International News Article

News Media	Clause
CNN	Paul Dans, a former top adviser in Trump’s administration, steered Project 2025 as it carved a leading role in shaping discourse around what conservatives dreamed they could accomplish if Republicans won back the White House

BBC	In practice, that would streamline decision-making, allowing the president to directly implement policies in a number of areas.
Forbes	“going to lay the groundwork and detail plans for exactly what our movement will do ... when the American people give us a colossal mandate.”

1. The word "could" is used to express the possibility or potential of a future outcome but with an element of uncertainty. The phrase "what conservatives dream they can achieve" refers to things that conservatives might be able to achieve if they win back the White House, but which are not certain to come true.
2. In this sentence, the word "will" is used to indicate the possibility or consequence of an action that has not yet occurred but is considered possible or predicted to occur in the future. The sentence "In practice, this will facilitate decision-making" means that if implemented it will simplify the decision-making process. In other words, "will" here states an outcome that is anticipated or expected from a scenario, but is not certain to occur because it has not been tested or implemented.
3. The word "will" in this sentence is used to indicate a definite or planned action in the future. The phrase "what our movement will do" refers to what the movement will definitely do when it receives the overwhelming support of the American people. "Will" here expresses a commitment or belief that an action “will” be carried out after the conditions (receiving a large trust) are fulfilled.

Active and Passive Voice

Table 3.7 Active and Passive Voice in International News Article

	ABC News	CNN	The Washington Post	BBC
Active	6	5	14	15
Passive	4	6	12	10

As shown in the table, there are differences in the frequency of use of active and passive sentences. From this data, the BBC has active sentences 15 times, while the second place that has active sentences is The Washington Post (14), ABC News (6), and CNN (5). Meanwhile, the most passive sentences came from The Washington Post with 14 mentions, in second place were BBC (10), CNN (6), and ABC News (4). Therefore, the

BBC is more concerned with the impact of an action while The Washington Post is more focused on who carried out the action.

Table 3.8 Sample of Active and Passive Voice in International News Article

News Media	Active	Passive
ABC News	"Democrats say the plan is a warning of what is to come under a second Trump term."	"Project 2025 was always planned to move on to the next phase now."
CNN	"Dans served as chief of staff at the US Office of Personnel Management during the Trump administration."	"Project 2025 includes many policy priorities that are aligned with those of the former president."
BBC	"The document sets out four main policy aims."	"The Department of Health and Human Services should be maintained according to the document."
The Washington Post	"Trump said, 'They're going to lay the groundwork and detail plans for exactly what our movement will do.'"	"Project 2025's proposals were turned into a frequent campaign attack."

Conclusion

Critical discourse analysis of international news regarding "Trump and Project 2025" reveals that the media has constructed a significant narrative influencing public perception. Through textual practices such as modality, the use of active and passive voice, and nominalization, the media has reinforced conservative values and strategic policies. This analysis uses Norman Fairclough's three-dimensional framework to understand how language is used not only for communication but also to influence our understanding of the world and social issues.

Modality in the text serves to indicate levels of certainty, possibility, or obligation within a statement, thereby shaping specific interpretations of the Project 2025 agenda and revealing the power dynamics and persuasion strategies used in news delivery. The choice between active and passive voice affects the focus of the narrative, with active voice highlighting the actors and passive voice shifting attention to the actions themselves, potentially obscuring the social actors involved. Additionally,

nominalization, by transforming verbs into nouns, often hides the actors, making responsibility appear more abstract and indirect.

This analysis uncovers how language is strategically used in media discourse to frame Project 2025, ultimately shaping public perception of Donald Trump's political vision and its implications for the 2025 U.S. presidential election.

Abstract

This study aims to analyze the schematic structure and metadiscourse features in educational videos created by Mike Teacher. The research investigates how these features contribute to the effectiveness of the videos in conveying educational content. Data was collected from a selected corpus of Mike Teacher's educational videos, focusing on identifying common schematic patterns and the use of metadiscourse markers. Through qualitative analysis, the study found that Mike Teacher's videos consistently employ a structured schematic format, incorporating interactive and engagement markers that enhance learner comprehension and retention. The findings suggest that these features play a significant role in facilitating the educational impact of the videos. The study contributes to understanding the interplay between schematic structures and metadiscourse in educational media.

Keyword: *educational videos, metadiscourse analysis, schematic structure*

Introduction

Educational videos have experienced remarkable growth in recent years, primarily due to their ability to engage diverse learning styles and provide flexible, accessible content. This trend is particularly beneficial for English learners in Indonesia, where traditional educational resources might be limited. The dynamic nature of videos allows for a multi-sensory approach to language acquisition, incorporating visual aids, auditory input, and interactive elements that enhance comprehension and retention. Moreover, the availability of online platforms means that learners can access high-quality educational content anytime and anywhere, breaking down geographical and resource barriers. As a result, educational videos are not only enriching the learning experience but also expanding opportunities for English language development in regions with varying levels of educational infrastructure.

It is interesting to explore how the speaker in educational videos structures their content to engage the audience effectively. Mike Teacher's educational videos serve as an excellent example, where the careful organization of ideas and the strategic use of metadiscourse markers play a crucial role in enhancing clarity and persuasiveness. By examining the schematic structure of his videos, we can gain insights into how information is presented in a logical sequence, making complex concepts more accessible to learners. Furthermore, the use of metadiscourse markers, such as transitions, emphases, and interactive cues, provides a valuable lens to understand how the speaker guides the audience through the material, creating a more interactive and cohesive learning experience. This study aims to analyze these elements, offering a deeper understanding of the rhetorical strategies employed in educational video content.

Mike English is a highly experienced English educator with over ten years of teaching adults from diverse backgrounds. Originally from the United States and having lived in Thailand from 2012 to 2022, he has delivered more than 12,000 hours of in-person instruction. His teaching experience spans a wide range of students, from homemakers and engineers to business executives. Additionally, Mike has worked as a hospitality trainer in a five-star hotel and as a communication coach for Japanese business professionals. This broad experience enhances his educational videos, making them a valuable resource for global learners.

One such example of Mike Teacher's effective educational content is the video titled *"Using Do and Did in Positive Sentences,"* which was published on his YouTube channel on June 17, 2024. This video has garnered 4,616 views, reflecting its relevance and popularity among learners. Through this video, Mike Teacher continues to leverage his extensive teaching experience to break down complex grammar points into clear, accessible explanations, further enriching the learning journey of his diverse, global audience.

In recent studies, the field of text analysis has increasingly focused on how language is used to create emphasis and structure in communication. This growing interest stems from the recognition that the way we arrange and highlight information can significantly influence how messages are received and understood. For example, research by Hyon

(1996) and Eggins (2004) on schematic structure theory highlights how texts are often organized in predictable, step-by-step stages to form a coherent narrative. These stages are crucial in guiding the audience through a logical flow of ideas, making the message more compelling and easier to follow.

A key issue in analyzing educational videos is the limited focus on how schematic structures and metadiscourse features engage and guide viewers. While text analysis has advanced in written communication, there's a gap in applying these insights to multimedia. As videos become more prevalent in education, understanding these elements is crucial for creating content that improves student comprehension and retention.

Several studies on metadiscourse highlight its significant role in academic communication across different contexts. Joseph J. Lee and Nicholas C. Subtirelu (2015) investigate how EAP teachers and university instructors use metadiscourse, finding that while EAP teachers focus on engaging students through discourse framing, university instructors emphasize connecting ideas in lectures. This real-time influence aligns with Pilar Mur-Dueñas (2011), who explores cross-cultural variations in metadiscourse in Business Management research articles. Her findings show that linguistic and cultural contexts, such as US and Spanish settings, affect the strategic use of metadiscourse features, revealing how rhetorical choices are shaped by these contexts. Complementing these insights, Puangpen Intaraprawat and Margaret S. Steffensen (1995) analyze metadiscourse in persuasive essays by ESL students, highlighting that skilled writers use metadiscourse more effectively to engage readers, while less skilled writers fail to make their texts as accessible. Together, these studies underscore the crucial role of metadiscourse in shaping effective communication and reflect its varying applications across different educational and cultural contexts.

This research aims to analyze and describe the schematic structure and metadiscourse features present in Mike Teacher's educational videos. By examining these elements, the study seeks to understand how they contribute to the effectiveness of the educational content and its pedagogical implications.

The main components of the schematic structure in Mike Teacher's educational videos include a clear and logical progression of ideas, often beginning with an introduction to the topic, followed by a step-by-step explanation of concepts, and concluding with a summary or practical application. Throughout the video, Mike Teacher uses metadiscourse markers such as transitions, signposts, and emphases to guide the viewer, making the content easier to follow and understand. These elements create a coherent flow of information, helping learners grasp complex concepts while maintaining engagement through interactive and visually supported content.

Theory and Method

Schematic structure theory is essential for understanding how effective communication is organized, focusing on how information is arranged to create a coherent narrative. This theory, highlighted by scholars like Hyon (1996), Eggins (2004), and Martin (1992), emphasizes the importance of structuring texts into predictable stages, such as introduction, body, and conclusion, to convey a message clearly. According to Martin, schematic structures guide the organization of meaning in texts, ensuring that each part contributes to a larger, cohesive whole. Analyzing communication through this lens reveals how managing transitions, maintaining logical flow, and emphasizing key points contribute to impactful and coherent messages, offering valuable insights for both evaluating past performances and guiding future preparations.

Coined by Zellig Harris in 1959, the term metadiscourse provides a framework for comprehending language in use, illustrating a writer's or speaker's efforts to shape a recipient's interpretation of a text. Subsequent developments by scholars such as Williams (1981), Kopple (1985), and Crismore & Farnsworth (1989) have expanded the concept, then the latest one (Dafouz-Milne, 2008).

This study employed a qualitative descriptive approach to analyze the schematic structure and metadiscourse features in educational videos. Qualitative descriptive research is commonly used to provide a comprehensive summary of events in the everyday terms of those events (Sandelowski, 2000). In this context, the method allowed for a detailed examination of how Mike Teacher structures his videos and uses metadiscourse to guide viewers through the content. The analysis focused on identifying the stages of schematic structure, such as the introduction, body, and conclusion, as outlined in Schematic Structure Theory (Eggins, 2004; Hyon, 1996; Martin, 1992). Furthermore, the study investigated how metadiscourse markers are employed, following frameworks established by Kopple (1985), Crismore & Farnsworth (1989), and more recently, Dafouz-Milne (2008). These markers, such as transitions, emphases, and interactive cues, were categorized to understand how they contribute to engagement and clarity in educational content. Data were collected from a series of Mike Teacher's videos, and the results were analyzed to identify patterns in the use of these rhetorical strategies, offering insights into their pedagogical implications.

Findings and Discussion

Schematic Structure

To understand the effectiveness of educational content in videos like those produced by Mike Teacher, analyzing the schematic structure of the text is crucial. The schematic structure refers to the organization and arrangement of content to create a clear and coherent message. In the video script provided, we can identify several key components of schematic structure:

Table 1. Schematic Structure

Structure	Explanation
Opening	The video begins with an engaging introduction by Mike English, who clarifies the use of "do" and "did" in positive sentences. He states, <i>"I'm teacher Mike and today we are talking about two of the main reasons why we sometimes put do and did before the main verb in positive sentences,"</i> setting the stage for understanding their role in English grammar and everyday communication.
Explanation of Key Points	The script is organized to highlight key points effectively. It starts by explaining the first reason: adding emphasis, as shown with "do" and "did" to highlight surprising information, e.g., <i>"The first reason that we do this is to add emphasis."</i> It then moves to the second reason: showing contrast, which clarifies differences and deepens understanding. This structure helps viewers follow and appreciate the nuances of the discussion.
Illustrative Examples	The script uses specific examples to clarify explanations, such as: <i>"If you speak English and another person asks you why you don't speak English, you could reply, 'I do speak English.'"</i> This example shows how "do" emphasizes the fact that you speak English, enhancing understanding.
Engagement and Call to Action	The video script includes a call to action to boost engagement and gather feedback. For example, it might prompt, <i>"If you are finding this video useful, please don't forget to give it a like..."</i> , which helps connect with the audience and provides insight into the video's impact.
Contrast and Additional Explanation	The explanation might include a statement such as, <i>"The second reason why we use 'do' and 'did' in this manner is to illustrate a contrast or to differentiate one idea from another."</i> This approach helps clarify how these grammatical choices effectively highlight differences between concepts.

This structured approach helps viewers follow the explanation step-by-step, reinforcing learning by clearly separating different aspects of the topic and providing practical examples.

Metadiscourse Features

Grammatical Cohesion

Grammatical cohesion involves using conjunctions, pronouns, and other grammatical devices to logically connect sentences and ideas within a text for coherent flow.

Table 2. Conjunction

A conjunction is a word that connects clauses, sentences, or words to show relationships between ideas.

Word	Frequency	Sample
and	10	<i>I'm teacher Mike and today we are talking about...</i>
or	6	<i>You could reply I do speak English or maybe someone thinks...</i>
because	3	<i>We're saying something that might surprise people or is the opposite of what another person said because...</i>
if	3	<i>If you are finding this video useful...</i>
when	3	<i>When we use do and did to add emphasis...</i>
but	3	<i>I'm not from the UK but I do have friends from there...</i>
although	2	<i>Although she's not a big fan of chocolate...</i>
however	2	<i>However, sometimes we use the base form of the verb with do or did...</i>
Total	32	

Conjunctions are crucial for constructing clear and nuanced sentences. For example, "and" connects ideas, as in "I'm teacher Mike and today we are talking about

conjunctions," while "or" offers alternatives, such as "You could reply I do speak English or maybe someone thinks differently." "Because" provides reasons, explaining surprising or contrary points, like "We're saying something that might surprise people or is the opposite of what another person said because of new information." "If" introduces conditions, for example, "If you are finding this video useful, keep watching," and "when" specifies contexts, as in "When we use do and did to add emphasis, we alter meaning." "Although" presents contrasts, as in "Although she's not a big fan of chocolate, she enjoys desserts," while "but" highlights contradictions, such as "I'm not from the UK but I do have friends from there." Finally, "however" introduces counterpoints, as in "However, sometimes we use the base form of the verb with do or did for emphasis.

The conjunction "and" appears ten times in the text, serving as a key element of grammatical cohesion. By linking words, phrases, or clauses, "and" helps to create a smooth flow of ideas, ensuring that the text is coherent and easy to follow. This frequency of use highlights its importance in maintaining the logical connection between different parts of the text, making the overall message clearer and more cohesive.

The conjunction "or" is used six times in the text, playing a crucial role in grammatical cohesion. "Or" introduces alternatives or different possibilities, helping to clarify options or choices within the text. Its use ensures that the reader understands the range of possibilities being discussed, contributing to the overall coherence and clarity of the message. The repetition of "or" underscores its function in guiding the reader through different options or scenarios, making the text more precise and logically structured.

The conjunctions "because," "when," "although," "but," and "however" also appear in the text, though less frequently. They play a less significant role in linking ideas compared to "and" or "or," but still contribute to the overall coherence by providing reasons, conditions, contrasts, or exceptions.

Discourse Markers

Discourse markers are linguistic elements used to organize and manage the flow of communication, helping to structure discourse coherently. They serve to connect ideas, signal relationships between sentences or segments, and guide the listener or reader through the content.

Table 3. Discourse Markers

Type	Word	Frequency	Sample
Sequencing	and	5	<i>The first reason that we do this is to add emphasis to add emphasis basically means to really really focus on something and to try to make an idea very very strong or very very clear.</i>

	so	2	<i>So usually in present simple tense we use subject plus the base form of the verb for example I speak English and in past tense we usually use subject plus the past form of the verb for example I spoke English...</i>
Emphasizing	does	3	<i>He does study a lot more than you" or "Although she's not a big fan of chocolate, she does like chocolate ice cream...</i>
	did	1	<i>I did tell you the truth...</i>
Total		11	

"So" as a sequencing word is used to indicate a result or consequence that follows naturally from a prior statement or action. It signals that the next point or action is a logical continuation or conclusion of what has been previously mentioned, helping to maintain a smooth flow of ideas. The use of "so" in this context provides clarity by showing the relationship between events or ideas, guiding the listener or reader through a logical progression.

The word "and," when used as a sequencing tool, functions to connect ideas, actions, or events in a logical order, showing a progression or accumulation. It allows for the smooth transition between elements, indicating that what follows is part of the same sequence or process. This helps to organize thoughts clearly and maintain a coherent flow in communication, which is why it is frequently used in both writing and speech.

The word "does" as an emphasizing word is used to reinforce or stress the action or state being discussed. It adds intensity or certainty, ensuring the listener or reader focuses on the action being performed. This use of "does" can clarify doubts, challenge assumptions, or highlight the significance of the statement, making it more assertive or convincing. Its purpose is to emphasize that something indeed happens or is true, leaving no room for misunderstanding or downplaying.

In conclusion, these words "so," "and," "does," and "did" each play a crucial role in enhancing clarity, whether by indicating sequence or adding emphasis, ensuring the communication of ideas is both coherent and impactful.

Conclusion

In conclusion, the schematic structure and metadiscourse analysis of Mike Teacher's educational video reveal significant insights into its instructional design and communicative effectiveness. The video employs a clear and organized schematic structure, enhancing the coherence and flow of the content. Metadiscourse strategies are effectively utilized to guide viewers through the material, highlight key points, and foster engagement. These features collectively contribute to a more interactive and

comprehensible educational experience, demonstrating the importance of thoughtful structuring and strategic language use in educational media. This analysis underscores the value of incorporating well-defined organizational and rhetorical elements in enhancing the quality and impact of educational videos.

Abstracts

From old times until now, adolescence is defined by a fight between one's aspirations and society's expectations, making it a tough road to manage. "What do you want to do with your life?" is an often asked question that is at the heart of the struggle among the young generation. Teun A. van Dijk's Critical Discourse Analysis (CDA), which illuminates how language both generates and preserves social ideas, provides a robust framework for analyzing these tales. In this article, Kirstine Finne Thomsen's speech, titled "Teenagers are more than their future careers," is examined using critical discourse analysis (CDA) using Van Dijk's socio-cognitive approach on a textual level. The study concludes that whereas societal desires frequently lead youthful individuals to comply with an "ideal" way, it is pivotal to recognize the significance of individual development and distinction in forming one's future. This research aims to advance knowledge about how societal expectations influence teenage identity and how they may be rethought to better accommodate the variety of experiences that today's youth have. The speech's actual text served as the source for the data analysis. The text's rhetorical, syntactic, and semantic components are all examined in this article with the data.

Keyword: critical discourse analysis, social speech, teenagers, text

Introduction

The struggle between one's own goals and society expectations characterizes adolescence, making it a difficult journey to navigate. "What do you want to do with

your life?" is a commonly asked question that lies at the core of this conflict. This is a question that many kids, like me, find more like a chore than a chance to reflect on themselves. It hovers over social interactions, scholastic endeavors, and family get-togethers, putting pressure on people to follow a predetermined route to adulthood. However, this pressure frequently casts a shadow over the life's immediate events and developmental stages that define adolescence.

The idea of the "ideal teenager" is expressed in Kirstine Finne Thomsen's presentations through stories that mirror society norms and ideals in TED Talk Video uploaded in TED x Talks YouTube channel titled "Teenagers are more than their future careers" on July 31st 2024. These talks frequently stress the value of making future plans and coordinating one's activities with long-term professional objectives.

It is interesting to see her ideas, and how she organizes her ideas into 15 minute compelling talks. This is seen through Van Dijk Critical Discourse Analysis. A strong framework for dissecting these stories is offered by Teun A. van Dijk's Critical Discourse Analysis (CDA), which sheds light on the ways in which language both creates and maintains social ideas. Critical discourse analysis (CDA) is a theory for understanding discrimination, ideology, and racism in sociocultural language studies (Jhonson, 2012).

Van Dijk's Critical Discourse Analysis (CDA) examines how discourse both shapes and is shaped by social systems, with a focus on the relationship between language and power. By using this paradigm to analyze Thomsen's depiction of the perfect adolescent, we can identify the underlying presumptions that underlie her talks of success, youth, and identity. This analysis will show how these discourses, which frequently downplay the importance of living in the moment and embracing adolescence's unpredictability, both reflect and reinforce society expectations.

In order to determine whether Thomsen's picture of the perfect teenager is accurate or not, this article will critically examine his portrayal and consider how much it differs from young people's actual experiences. It will examine the ramifications of these discourses for our knowledge of and assistance with teenagers, questioning the idea that kids should be primarily focused on planning for the future rather than on personal development and savoring the now.

Through an analysis of the language and topics covered in Thomsen's presentations, this research aims to advance knowledge about how societal expectations influence teenage identity and how they may be rethought to better accommodate the variety of experiences that today's youth have.

There have been numerous studies on analyzing speech by using Van Dijk Critical Discourse Analysis theory such as; (Lestiani, Suprayogi, Rizma, 2023) this research analyzes the discourse of Matt Walsh's speech which relates directly to social problems especially gender ideology, (Dewi, Amalia, 2021) this research analyze of the construction of public opinion in online news of the issue of Nurses's Expulsion from boarding house, (Irmayani, Usman, 2022) his research analyzes the political issues in VOI News of Formula E "Jakarta E-Prix". (Ivana, Suprayogi, 2020) this research

analyzes Iran and the United States in Donald Trump's speech. However, there remains a significant gap in the use of this model to analyze speeches related to Ideal Teenager for future planning, "Teenagers are more than their future careers", critiques societal pressure on teenagers to have a well-defined career plan, advocating instead for embracing the present and the uncertainty of adolescence.

Therefore, this study examines TEDxOdense by Kirstine Finne Thomsen to understand how the speaker uses various linguistic devices to explain tips to become an ideal teenager for the future career.

Theory and Method

This research uses qualitative research according to Kitto, Chesters, & Grbich (2008), qualitative research is the systematic gathering, organization, description, and interpretation of textual data gathered through conversation, observation, or documentation. This research focuses on diverse points of view of analysis on both inductive and deductive processes (Creswell, 2014 in Suprayogi and Pranoto, 2020). This research investigates the discourse of speech, which connects to societal problems, employing a qualitative method in the most appropriate way. This method can assist in comprehending the speech's discourse structure by using the text as a guide. In this instance, critical discourse analysis (CDA), particularly within the framework of Van Dijk's socio-cognitive approach on a textual level, is utilized to examine the qualitative description of the ideal teenager in KirstineFinne Thomsen's speeches.

The data were taken from Kirstine Finne Thomsen's speech on a YouTube video with the title "Teenagers are more than their future careers" published by TEDxOdense on July 31st, 2024 with six minutes forty one second duration. The video was chosen because KirstineFinne speaks to teenagers who share her ideology about what makes a perfect teen for their future occupations, therefore it is expected that she will say what she says because it is straightforward and not tactful. In collecting the data, the writers download the video, watch the video, and copy the transcription from the YouTube transcription tools in that video, then the data is put in Google Docs.

After that, in order to obtain reliable data, the writers examined and compared the script's validity to the video by watching it multiple times. This study is in the form of word, phrase, clause and sentence which shows an ideal teenager in the speaker's speech. Finally, the writers chose and classified the sentence structure based on all components of Van Dijk's CDA technique, resulting in a table depicting both the image of an ideal teenager. The collected data were evaluated using Van Dijk's Socio-Cognitive approach, with a focus on textual analysis, socio-cognitive, and social context levels. Van Dijk divided the text's dimension into three categories (macrostructure, superstructure, and microstructure) in order to facilitate text dissection. Superstructure refers to the overall structure or schematic structure of a text or image. Macrostructure focuses on the main theme or focal point of a discourse. Microstructure refers to the minute details or little elements within a text Van Dijk (1993). The writer then evaluates each of the data points to determine the meaning conveyed in the data through a comparison of the ideal teenager. After all of the data has

been examined, the writers reach a conclusion that summarizes all of the findings of the analysis.

Findings and Discussion

Three different types of structures are the main subject of the text analysis. The three levels of organization are the speech's content (superstructure), the text's theme (macrostructure), and the text's smaller structure (microstructure) for analysis.

3.1 Macrostructure

To make the readers understand of this article, the writer explains the point of macrostructure in the Kirstine Finne speech text. Macrostructure is the hierarchical organizing of text content around its fundamental concepts, or macro propositions, which is essential for text comprehension (Glowalla, 1982).

Excerpt 1:

But most importantly, the frequent bombardment of the question: what do you want to do with your life? Why is it that each time I meet a new person, that's the first thing they ask me? Why is it that half my conversations, probably even more at family events, are just that? Of course, most of the time my answer is uncertain: "I don't know."

This sentence has a macrostructure regarding the uncertainty and social pressure young people experience when asked about their future. The sentence illustrates the unease and pressure young people have as a result of social expectations to have a well-defined life plan. In the superstructure, The opening sets the stage by expressing the speaker's own frustrations, which the audience may relate to. It quickly highlights the main issue, the pressure to plan for the future. After that, the speaker expresses their position on societal expectations, providing the framework for the arguments that follow.

Then, the speaker stated the Criticism of cultural pressures and unreasonable expectations imposed on young people. Personal comments and metaphorical metaphors that enhance and make the idea more understandable. A reevaluation of common wisdom that moves from discarding a cliché to acknowledging its underlying meaning. Moreover, the speaker restates the major themes and sends a strong, personal message. The speaker promotes living life on one's own terms and defies society expectations.

3.2. Superstructure

In classical sociology, superstructure refers to the "explanation" of the Structural Base, which includes ideas such as completeness, necessity, and possibility (Nescolarde-Selva, 2017). This table explains the data of superstructure, its orientation, content, and

reorientation.

Structure of Discourse		
Superstructure		
Orientation	Content	Closure
Self-introduction	Pressure from Society	Core message
	Uncertain Answers	
Mentioning dislikes	Pressure in Education	Pointing out that adults themselves often don't have all the answers about their future.
	Life is Not Just a Career	
Emphasis on the most frequently received questions:	Present Experience Matters	Closes with a humorous invitation
	River and Lake Analogy:	
Relaxed tone, humor, and capturing the audience's attention	Critique on the Maxim of Travel	End with a relaxed and powerful thank you.
	Savoring Every Moment	

Opening:

In the opening or the introduction part of the Kirstine's Speech structure, the speaker begins with a personal introduction about how do teenagers see and answer the ever-present question, "What do you want to do with your life?" based on Kirstine Finne Thomsen'. These stated in the example below;

Excerpt 1:

"I'm 15 and as a typical 15 year old, there are many things that I hate. Among those are olives, homework, slackers, you know, those people that pull their pants really low down

so you can see their underwear and it kind of looks like their ass slacking..."

In the opening section, the speaker starts with an informal and humorous self-introduction, giving a light and relaxed impression. This approach helps to capture the attention of the audience, especially the younger group, as the language used is very close to the everyday conversation of teenagers.

Content:

Excerpt 2: "From the very start of our educational journey until its very end, there's this insistent pressure to be what society's predefined role is for ourselves. We are pushed to secure a job, with the underlying message being that it's all about reaching that endpoint."

focused on criticizing the social and educational systems that the speaker felt put too much pressure on teenagers to think about their future careers. Kirstine used the analogy of rivers and oceans to describe life as a journey full of possibilities. "We can go anywhere with a slight change in wind direction" is a powerful metaphor to emphasize that life does not always have to be rigidly directed, but should be flexible and full of open opportunities. This content expands on the ideas introduced in the opening, reinforcing the main message with more in-depth arguments and analogies.

Closure:

Excerpt 3: "Don't linger in anticipation of the future. It has a way of sneaking up on you. And before you know it, that future that you so meticulously planned for has become the past... Whatever metaphor you find fits you and live life on your own time."

Kirstine concludes not to obsess too much about the future because time has a way of running fast. She suggests that each individual should live according to his or her own time and path, conveying freedom and flexibility in living life. This statement reinforces the main message of the speech: that life is not just about achieving a certain goal, but also about enjoying the process of the journey itself.

3.3. Microstructure

Microstructural analysis in text entails comprehending interclausal semantic relationships and integrating all sentences into a global representation of discourse meaning (Olagunju, 2019).

3.3.1. Semantic Element

This data is a comparison between Kirstine's thoughts and other people's thoughts about young people.

No	Kirstine	Others
1	However, I find this notion misplaced	What do you want to do with your life?
2	The belief that you should be entirely dedicated to foreseeing and preparing for that future seems like a means to an end, when what really prepares us is life	From the very start of our educational journey until its very end, there's this insistent pressure to be what society's predefined role is for ourselves
3	We end up fixated on what's next, mistaking it for an epilogue when again, it's merely the opening of a new chapter	We are pushed to secure a job, with the underlying message being that it's all about reaching that endpoint, our future careers.
4	However, what often goes unnoticed is that this lake in turn connects with many other rivers and even grander lakes, which all inevitably flow into the vastness of the ocean	There's a prevailing consensus that if we are not actively preparing for the future, we are wasting our time.
5	If we are a small drop in those waters, we could go anywhere with just the slightest change in the tide or a gust of wind	Going to sleep late, wasting my time.
6	You don't have to travel everything figured out	Doing a hobby not necessarily for the future, wasting my time.
7	Frankly, we've all found it annoying and I found it incredibly pretentious. Isn't it the only reason we even embarked on the journey in the first place to reach that destination	Going on the internet, definitely wasting my time.
8	I have come to realise that saying is onto something	And just taking a break, wasting my time.
9	Why insistently fixate on what lies ahead	Why keep on telling me that

	when there is a joy to be found in the present? That is a lesson that I myself haven't quite got the hang of yet, but it is something that resonates with me	it's not about the destination, when that is everything, you've put in my head throughout my whole life.
10	What I do with my life on my own time is my business	
11	Don't linger in anticipation of the future	
12	It has a way of sneaking up on you. And before you know it, that future that you so meticulously planned for has become the past	
13	So teachers, parents, you supposed to be knowledgeable people	
14	And a less serious note: we don't know what the hell we are doing	
15	And lastly, my message is just to go off the road, sail in another river	

This comparison proves that Kirstine's speech was to encourage other young people to live by their own choices. This can be seen from how much Kirstine expresses her thoughts and opinions to answer what others think of young people.

3.3.1.1. Inclusion and Exclusion

In critical discourse analysis, analyzing the microstructure of texts can provide insights into how language shapes social relations, identity, and power. The writers draw it in the table below and explain each point of microstructure analysis is the use of pronouns, which can signal inclusion and exclusion within a particular group.

Table 1
Frequency of Inclusion and Exclusion Pronoun

Inclusion	Frequency	Exclusion	Frequency
I	10	His	1
You	13	Him	1

My	17	They	1
We	13	Their	3
Our	4		
Us	2		
Total	59	Total	6

The issue of ideal teenagers conveyed in Kirstine Finne Thomsen's speech is reflected through a variety of linguistic devices and strategies. The use of inclusion pronouns reaches (59) while exclusion pronouns are lower than inclusion pronouns, (6). The frequent use of inclusion pronouns in Kirstine Finne Thomsen's speech fosters a sense of freedom in showing one's own path in life, while the limited use of exclusion pronouns ensures the focus remains on improving collective reasoning rather than targeting "others" outside. The use of inclusion pronouns outweighs that of exclusion pronouns. Probing Personal Pronouns in English Speeches to Actuate (An-qi, W., & Zhi-han, Y. 2018) In this speech, the issue of ideal teenagers is discussed thoroughly.

Excerpt 1 :

"I have come to realise that that saying is onto something."

Excerpt 2 :

*"**You** don't have to travel to figure everything out."*

Excerpt 3 :

*"Going to sleep late, wasting **my** time."*

Excerpt 4 :

*"**We** are pushed to secure a job, with the underlying message being that it's all about reaching that endpoint"*

Excerpt 5 :

*"**Our** future careers."*

Excerpt 6 :

*"you ask **us** expecting we will have an answer when we eventually step into adulthood, which contrary to popular belief, we will."*

The frequent use of inclusion pronouns in Kirstine Finne speech fosters the speaker and audience,

Excerpt 7 :

*"I questioned him about **his** retirement plan?"*

Excerpt 8 :

*"I questioned **him** about his retirement plan?"*

Excerpt 9 :

*"That's the first thing **they** ask me?"*

Excerpt 10 :

*"it kind of looks like **their** ass slacking, wet clothes, when I'm just sitting in my room minding my own business, and my parents apparently want me to help around the house"*

The frequent use of personal pronouns in Kirstine Finne's discourse to refer to the ideal teenager compared to personal pronouns ("her", "her", "their", "they") in Kirstine Finne Thomsen's discourse reflects a rhetorical strategy to foster a sense of solidarity and shared experience between the speaker and the audience. The lower frequency of exclusionary pronouns(6), indicates that although Kirstine Finne Thomsen conforms to the collective, positioning herself as part of the collective experiencing the same social pressures and challenges. This creates a collective character, empowering the audience to feel invested and supported.

3.3.1.2. Synonym and Antonym

A synonym is a word or phrase that has the same or nearly the same meaning as another, whereas an antonym is the reverse (Fernal, 2018). In this article, the writer finds the synonym and antonym in the speech text and inline with the theme of the speech.

The first synonyms are the word *Career*, *Role*, and *Job* which are related terms that revolve around the theme of professional life and future aspirations. Second, the word *Path* and *Journey* which are metaphors related to life's journey and its unpredictability. Third, the word *River* and *Lake* are also the same from the previous, which is the metaphor of the journey and its unpredictability because river and lake are just flowing on their own path. Last, the word *Fixate* and *Insist* are synonyms because these two words are related which convey the pressure to think about the future.

In addition, there are several antonyms in this speech. First is the words *Hate* and *Like*. The word *hate* means Intense dislike or aversion while the word *like* means deep affection or positive feelings towards something. This speech not only mentioned the things that the speaker hates but also the opposite emotions. The second is the word

start and *end*. The word *start* means the beginning of something while the word *end* means the conclusion of something. This speech discusses the entire span of the educational journey from start to end.

3.3.2 Syntax Elements

3.3.2.1. Processes

The following table explains the overview of syntactic elements, namely processes. The writers draw the table below and explain the data found in Kirstine Finne Thomsen' speech.

Table 3 Processes

Processes	sample	Frequency
Material	hate, pull, see, sitting, prepare, wasting, going, doing, taking, working, step, fixated, embarked, planned, go, sail, live.	17
Mental	hate, find, remember, realize, resonates, know (3)	8
Verbal	say, ask, talk, telling, asked, answer, questioned.	7
Total		32

Material processes refer to physical actions or events that occur. It often describes something that is being done or performed. The use of Material reaches 17 meanwhile Mental and Verbal is lower than the Material, which is 8 and 7. in the sentences “*when I’m just **sitting** in my room minding my own business, and my parents apparently want me to help around the house.*” This sentence is a material process as it describes the physical action of the speaker who is in a passive state, physically sitting in their room.

Mental processes relate to, feeling and thinking such as considering, sensing and seeing. In the sentence “*Do you **remember** your very first job?*.” This sentence is a mental process as it describes the thinking or the recalling past experience of the speaker to the audience.

For the Verbal processes, Verbal processes are related to communication, including saying, asking, or telling something to someone. In the sentence “*Why keep on telling me that it’s not about the destination.*” This sentence is a verbal process as it describes that by focusing on “telling”, the speaker emphasizes the ongoing nature of this

communication, recommending the dissatisfaction of always being asked to center on the journey and not on the end point.

3.3.3. Rhetorical Aspect

Rhetorical figures in text are artistic variations in the form of a statement that discriminate between figurative and non figurative text, schemes and tropes, and four rhetorical operations: repetition, reversal, substitution, and destabilization (Mcquarrie, 1996). In this article the writer finds the rhetoric and repetition words in the text.

3.3.3.1. Repetition

The following table explains the repetition in Kirstine Finne Thomsen’ speech. Repetition in text is used as a linguistic tool for logical construction, supplementary actualization, mood production, and situational representation (Yusupova, 2021).

Table 4 Repetition

Types	Frequency	Word	Sentences
Repetition	2	I don’t	- I don’t know - I don’t have a clue
	3	Every	- Every new meeting - Every family event - Every parent teacher conference
	4	Wasting	- Doing a hobby not necessarily for the future, Wasting my time - Going to sleep late, wasting my time - Definitely wasting my time - And just taking a break, wasting my time
	2	Very first	- Just think about your very first job - And your very first role
Total	11		

Repetition is the act of repeating words, phrases, sounds, or concepts for emphasis or to achieve a specific purpose. It is a commonly used approach in speech, writing, and everyday communication.

In Kirstine Finne Thomsen's speech, there are 11 repetition frequencies, one of which is:

*“Doing a hobby not necessarily for the future, **Wasting my time**”*

The function of repetition emphasized by Kirstine Finne Thomsen in the text is to keep the audience interested in the topic in her speech. And convey it strongly so that the audience will understand what Kirstine said.

3.3.3.2. Metaphors

Metaphors are essential for understanding, digesting, and keeping information, and they can help pupils understand science and social issues, MacKay, D., Konishi, T., & Ortony, A. (1980).

Excerpt :

***“Bombardment** of the question: what do you want to do with your life?”*

The word bombardment in the quote is a metaphor that describes the constant pressure felt by the speaker regarding questions about the future, giving the impression of an exhausting onslaught.

Excerpt :

***“If we are a small drop in those waters,** we could go anywhere with just the slightest change in the tide or a gust of wind. “*

The clause in the quote belongs to a metaphor that describes humans as a small part of a larger force (river or ocean), emphasizing uncertainty and lack of complete control over the future.

Excerpt :

***“Imagine your life's path as a river** interlinked with numerous others, all presumably flowing towards a common destination, the lake.”*

The clause in the quote is a metaphor that likens life to a flowing river, emphasizing the dynamic and changing journey.

Excerpt :

“And lastly, my message is just to go off the road, sail in another river.”

The clause in the quote belongs to a metaphor that implies the freedom to choose different life paths, according to their own desires or situations.

Conclusion

Kirstine Finne Thomsen's speech titled “Teenagers are more than their future careers”

emphasizes the pressure and disappointment that many teenagers experience due to societal desires about their future. Through a Basic Talk Examination (CDA) based on Teun A. van Dijk's socio-cognitive system, they think about how her discourse reflects societal standards with respect to youth character, victory, and future arranging. The discoveries uncover that Thomsen studies the steady societal weight to have a well-defined career arrange, and instep advocates for living within the minute and grasping the instability of puberty. Through macrostructure examination, Thomsen's talk depicts the unease youthful individuals feel when inquired about their future. The superstructure illustrates how the substance is surrounded around this topic, whereas microstructure examination highlights the visit utilization of incorporation pronouns that make a sense of solidarity with the audience. The discourse is additionally filled with allegories, equivalent words, and antonyms that depict the unusualness of life, fortifying Thomsen's message that young people ought to focus more on individual improvement and the show, instead of exclusively arranging for their future careers. The study eventually concludes that whereas societal desires frequently weigh youthful individuals to comply with an "ideal" way, it is pivotal to recognize the significance of individual development and distinction in forming one's future. Thomsen's discourse energizes a reevaluation of common convictions about youth and victory, advancing a more adjusted viewpoint that permits youngsters to encounter life on their own terms.

The Influence of Plyometric Training on 25 M Breaststroke Swimming Speed in Athletes of Age Group (Ag) III and VI at Babeh Swimming School

Mita Asrilia Khodijah¹, Arifai²

asriliamita@gmail.com arifai@teknokrat.ac.id

Abstract

The purpose of this study is to determine the effect of lower-body plyometric training on the speed of 25-meter breaststroke swimming at the Babeh Swimming School club. By using the experimental method, "one-group pretest-posttest design". The population in this study amounted to 12 athletes at Club Babeh Swimming School, using the total sampling technique, because it used the entire population. The results of the study showed that there was an effect of plyometric exercise on the increase in swimming speed of 25 meters breaststroke, and there was a significant difference between pretest and posttest in increasing swimming speed ability. The data shows that the average pretest score is 51.24, while the posttest increases to 47.27. Therefore, it can be concluded that plyometric training successfully increased the speed of athletes at Club Babeh Swimming School, with an average change of 3.92.

Keywords: *swimming, plyometric, standing jump and reach, standing long jump.*

Introduction

Sports are physical activities carried out with the aim of improving physical fitness, health, and an individual's skills. Sports involve coordinated body movements, varying intensities, and can be performed individually or in teams. This is supported by the opinion of Mahfud & Fahrizqi (2020) that sports are a form of human movement behavior carried out specifically in various sports disciplines, each with different directions and purposes, making sports a phenomenon relevant to social life for everyone.

Swimming is a water sport that involves body movement in the water. In line with the opinion of Prawira et al. (2021), swimming is a water activity with various styles that has been introduced for a long time and provides many benefits to humans. This is an activity that is popular all over the world and can be done for recreational fitness, or at 3 Technocrat Universities in Indonesia as a competitive sport. Swimming can be done in various places such as swimming pools, lakes, rivers, and even the sea. There are several different types of swimming, including freestyle, breaststroke, backstroke, and butterfly. (butterfly). Each stroke has a characteristic movement that must be performed by the swimmer. In addition, swimming can also be a great sport for maintaining fitness and health. This activity engages almost all the muscles in the body and helps improve strength, endurance, and flexibility. Swimming also has a low impact on the joints, making it easier for people with joint issues to participate. At a competitive level, swimming has become an Olympic sport and has many different formats, ranging from individual races to team events.

Based on observations and information obtained by the researcher from the head coach of Babeh Swimming School on January 6, 2024, at 10:00 AM WIB at the UNILA Swimming Pool (University of Lampung), the athletes still need proper training, especially athletes in categories KU III & VI. Learning from their failures in the inter-city championship in the province of Bandar Lampung, the coach emphasizes that the athletes need to train harder, as stated by swimming coach Mr. Rusman, A.Md. The athletes already possess good swimming techniques however, it has been observed that their speed still needs improvement.

According to Mohammadi et al. (2014), it is concluded that the selection of appropriate plyometric exercises (bended knee jump, squat jump, jump to side, depth jump) for breaststroke swimmers aged 10-14 years can improve and enhance breaststroke swimming speed. Researchers are trying to address the speed issue in breaststroke swimming for athletes at Babeh Swimming School, one of which involves providing several exercises that can be performed, specifically plyometric training. The types of plyometric exercises that the researchers will implement are jumping types, namely Standing Jump and Reach and Standing Long Jump. Based on the above description, the researchers are interested in conducting a study at Babeh Swimming School with the title "The Effect of Plyometric Training on 25 M Breaststroke Speed in Athletes of Age Groups (AG) III and VI at Babeh Swimming School." As explained, two hypotheses arise in this study: Ha: There is an effect of the plyometric exercises Standing Jump and

Reach and Standing Long Jump on the 25M breaststroke speed of athletes at Babeh Swimming School. Ho: There is no effect of the plyometric exercises Standing Jump and Reach and Standing Long Jump on the 25M breaststroke speed of athletes at Babeh Swimming School.

Theory and Method

Populasi and Sample

According to (Arikunto, 2016), the population is the entire subject of the research. The population in this study consists of athletes from Age Groups (Ku) III and VI at Babeh Swimming School, totaling 12 individuals. A sample is a subset taken from the population, and there are certain criteria that must be met for the sample to be considered representative (Sutanto, 2001). In this study, the sample comprises the entire population, which is 12 individuals.

Data Collection Techniques

In this study, the testing instrument uses a test that targets existing values. The equipment used includes a volleyball, a net, cones as point markers, and a research blank.

1. Implementation

In accordance with the swimming competition regulations set by FINA, which have been translated into Indonesian by (Setiawan, 2014). In SW 4.1, the start in freestyle, breaststroke, butterfly, and individual medley races must be done with a jump. At the long whistle from the referee, the swimmer must step up onto the starting platform and remain still there. At the command "take your marks" from the starter, they must immediately take their starting position, with at least one foot in front of the starting platform, while the position of the hands is not specified. When all the swimmers have quieted down, the start signal can be given.

2. Time Recording

In accordance with the swimming competition regulations set by FINA, which have been translated into Indonesian by (Setiawan, 2014). In SW 4.1, the start in freestyle, breaststroke, butterfly, and individual medley races must be done with a jump. At the long whistle from the referee, the swimmer must step up onto the starting platform and remain still there. At the command "take your marks" from the starter, they must immediately take their starting position, with at least one foot in front of the starting platform, while the position of the hands is not specified. When all the swimmers have quieted down, the start signal can be given.

3. How to Calculate Points

- Points are not counted if there is a mistake in performing the breaststroke.
- Points are not counted if there is a mistake in performing the breaststroke.
- Points are obtained when performing the breaststroke from the start to the finish line.

Analysis Method

The normality test is used in conducting parametric statistical hypothesis testing. Because, in parametric statistics, requirements and assumptions are necessary. One of the requirements and assumptions is that the data distribution of each research variable being analyzed must form a normal distribution. If the analyzed data does not follow a normal distribution, it must be analyzed using non-parametric statistics. (Budiwanto, 2017). The normality test in this study was conducted using the Kolmogorov-Smirnov technique with the assistance of SPSS 26. If the p value is greater than 0.05, then the data is normal; however, conversely, if the analysis shows a p value less than 0.05, then the data is not normal. The homogeneity test is conducted to provide assurance that the group of data being analyzed comes from a population with not significantly different variances. (Budiwanto, 2017). The homogeneity test in research uses the F test with the help of SPSS 26. If the analysis results show a p value greater than 0.05, then the data is homogeneous; however, if the analysis results show a p value less than 0.05, then the data is not homogeneous. This test was conducted with the help of SPSS by examining whether the difference between the pre-test and post-test has an effect or not on the analysis of the impact of the Plyometric Standing Jump and Reach and Standing Long Jump training program on the improvement of breaststroke swimming speed. This analysis aims to determine whether there is a difference in the effects of the Plyometric Standing Jump and Reach and Standing Long Jump training programs on the

improvement of breaststroke swimming speed. The researchers will use the t-test with the help of SPSS. The significance value of the t-test is < 0.05 and the calculated t value is greater than the table t value. If the calculated t-value is smaller than the table t-value, then the alternative hypothesis (H_a) is rejected or the research is unsuccessful, and if the calculated t-value is greater than the table t-value, then the alternative hypothesis (H_a) is accepted or the research is successful.

Findings and Discussion

The results of the study on the effect of plyometric training on the improvement of 25-meter breaststroke swimming speed in athletes from Babeh Swimming School Club are described as follows:

Tabel 4.1. *Pretest dan Posttest data*

No.	<i>Pretest</i>	<i>Posttest</i>	Selisih
1	52.55	47.31	5.24
2	55.51	50.32	5.19
3	61.09	58.12	2.97
4	51.53	47.11	4.42
5	48.40	43.21	5.19
6	49.31	44.24	5.07
7	50.10	47.18	2.92
8	47.39	43.15	4.24
9	57.25	55.26	1.99
10	47.52	44.02	3.05
11	52.07	47.19	4.88
12	42.17	40.14	2.03
Mean	51.24	47.27	3.85
SD	4.81	4.96	1.24
Min	42.17	40.14	1.99
Max	61.09	58.12	5.24

Based on the table above, the descriptive statistics of the pretest and posttest of plyometrics on the 25-meter breaststroke swimming speed of athletes at Club Babeh Swimming School after the training is presented in the following table :

Tabel 4.2 Deskriptif Statistik Data

Pretest			Posttest
N	Valid	12	12
	Missing	0	0
Mean		51.24	47.27
Std. Deviation		4.813	4.961
Minimum		42.17	40.14
Maximum		61.09	58.12

Based on the data in the table above, the pre-test and post-test of the effect of plyometrics on 25-meter breaststroke swimming show an average speed change from the pre-test of 51.24 to an increase of 47.27. After being given plyometric training for 16 sessions.

Prerequisite test

Uji Gain

The purpose of the test is to examine the influence of plyometrics on the speed of the 25-meter breaststroke using the following formula:

$$N \text{ GAIN} = \frac{\text{Skor Posttest} - \text{Skor Pretest}}{\text{Skor Ideal} - \text{Skor Pretest}}$$

Tabel 4.3. Hasil Uji Gain Test

Variabel	Min	Max	Mean	SD
Gain Score	40.14	58.12	.6546	.46412
Gain Persen	69.04	580.12	26.4634	0.05

Uji Normalitas

The purpose of the normality test is to determine whether the data obtained from the analyzed variable is normal or not. The rule used to determine normally distributed data is > 0.05 , and for data that is not normally distributed, it is < 0.05 . Below, it can be seen using the following table:

Tabel 4.4. Hasil Uji Normalitas

Variabel	P	Sig	Keterangan
<i>Pretest</i>	0.089	0.05	Normal
<i>Posttest</i>	0.121	0.05	Normal

From the results in the table above, it can be concluded that all data have a significance value > 0.05 . Therefore, we can say that the variable data is normally distributed.

Uji Homogenitas

The purpose of the homogeneity test is to examine the similarity of samples, determining whether the samples are uniform or not, taken from that population. If $p > 0.05$, then the data or test is considered homogeneous; if $p < 0.05$, then the data or test can be said to be heterogeneous. The results of the homogeneity test for this study can be presented as follows:

Tabel 4.5. Hasil Uji Homogenitas

Variable	Sig.	Keterangan
<i>Pretest</i>	0,793 > 0.05	<i>Homogen</i>
<i>Posttest</i>	0,845 > 0.05	<i>Homogen</i>

From the table above, it can be seen that the posttest significance value is $0.793 > 0.05$, indicating that the data is homogeneous, and the posttest significance value is $0.845 > 0.05$, which also indicates that the data is homogeneous or the same. Since all the data is homogeneous, the data analysis can proceed.

Uji Hipotesis

The t-test in this research can address the hypothesis once it has been proposed. Hypothesis testing is conducted to determine the acceptance or rejection of the proposed hypothesis. Hypothesis testing using the t-test (Paired Sample T-Test) at a significance level of 5%. Based on the results of the prerequisite tests, the data for this study is

normal and homogeneous, so the analysis used to test the hypothesis is the t-test using the Paired Sample T-Test. The data is considered significant if the p-value is less than 0.05. The results of the hypothesis can be observed in the table below:

Tabel 4.6. Hasil Uji Hipotesis

Rata-Rata	Df	T Tabel	T hitung	P
3,2	12	2.080	11.920	0.000

Based on the calculations from the data above, the calculated t value (11.920) is greater than the table t value (2.080) and P (0.000) is less than (0.05). These results indicate that the calculated average is 3.227. The calculated t value is greater than the table t value and the significance is less than 0.05.

Conclusion

Based on the research results and discussion, it can be concluded that the implementation of plyometric training can enhance speed in swimming. Therefore, the conclusions, implications, and recommendations are as follows: There is an effect of plyometric training on the improvement of 25-meter breaststroke swimming speed, and there is a significant difference between the pretest and posttest in the enhancement of swimming speed ability. Data shows that the average pretest score is 51.24, while in the posttest it increased to 47.27. Therefore, it can be concluded that plyometric training successfully improved the speed of athletes at Club Babeh Swimming School, with an average change of 3.92.

[¹, ²](mailto:rahmawatiia249@gmail.com), [²](mailto:reza.adhi.nugroho@teknokrat.ac.id)

Universitas Teknokrat Indonesia^{1,2}

Abstract

This research aims to determine whether there is an influence of Ladder Drill training on the improvement of agility among students in the futsal extracurricular program at SMK Yadika Bandar Lampung. This research method employs experimental research that involves the manipulation of one or more independent variables under certain conditions that may influence, potentially exist, but are not related to the problem being studied. The research design uses a Group Pretest-Posttest Design, which allows for a more accurate assessment of the treatment outcomes, as it can be compared with the conditions before the treatment was administered. The sampling technique used is purposive sampling, where the determination of the sample is based on specific considerations. In this study, the instrument used is the Hexagonal Obstacle Test. Meanwhile, the treatment provided is a ladder drill with several variations. The data analysis technique used in this study is the t-test. Based on the calculations, the average time taken for the Hexagonal Obstacle Test after treatment is faster compared to the average time taken for the Hexagonal Obstacle Test before treatment. Based on the calculations from the data above, the calculated t value is (11.218), the table t value is (1.753), and P is (0.000) (0.05). These results indicate that the calculated average is 4.752, the calculated t value is greater than the table t value, and the significance is less than 0.05, thus indicating a significant difference. From the results of the research and discussion, it can be concluded that there is a significant effect of ladder drill training on the improvement of agility in the futsal extracurricular students of SMK Yadika Bandar Lampung.

Keyword: ladder drill, agility

Introduction

Sport is a physical activity that aims to maintain and improve physical strength. Physical fitness refers to a person's ability to perform physical activities that require strength, endurance, and flexibility. Sport as a scientific study has three scientific aspects, namely ontological, epistemological, and axiological. Sport is a structured physical activity that involves the whole body. Sports are physical training activities, namely physical activities that aim to enrich and improve the skills, motor base, and abilities of athletes (sports disciplines) (Bangun, 2016). A very popular sport in schools is futsal. Because futsal is one of the sports that is easily enjoyed by all groups, ranging from elementary school students to university students.

Futsal is a game that resembles soccer, which is played at speed in a fairly small field. In futsal and soccer, the goal is to create and score as many goals as possible (Gumantan & Mahfud, 2020). In the game of futsal, agility is one that must be mastered by every player because the small field requires every futsal player to keep moving, changing directions to trick opponents. Agility is one of the physical components needed to support the skills of playing futsal. Therefore, agility is an important factor that affects the ability to dribble, which is one of the techniques used (Arwih et al., 2019). Dribbling is a technique that must be mastered and is one way of attacking for each individual on the futsal team.

Futsal is a sport that is at its peak and was originally created by Juan Carlos Ceriani with the aim of helping many people who, at that time, did not want to do physical activity (Neta et al., 2023). Futsal was popularised in Montevideo, Uruguay, in 1930 by Juan Carlos Ceriani, a football coach from Argentina. This sport aims to improve skills and requires fast reflexes, quick thinking and passing accuracy so that it becomes an attractive sport for both children and adults. The sport was invented and developed in Uruguay in 1930 by physical education professor Juan Carlos Ceriani with the aim of teaching soccer players to move faster and think faster by playing in tight spaces.

Basic technique is the foundation or first step to achieving the goal to be achieved. In futsal, to create maximum results (goals), players must have good basic techniques and a good team, such as passing, receiving (control), dribbling, shooting and heading. Basic futsal techniques can be the initial skills of a futsal player. These basic abilities need to be trained and honed by the player to find their personal style of play and skills that, when applied in a team, will be useful. Futsal is a team game played on a field smaller than a soccer field. Therefore, speed, agility, accuracy and good teamwork are important.

According to Setiawan (2017), Physical condition is one of the conditions that is indispensable for improving the performance of an athlete, and can be said to be the foundation of sports achievement. There are many benefits of good physical condition, such as being able to learn new skills that are relatively difficult more easily, less tiring when practising or participating in competitions, and completing training programs easily.

Agility is one of the components of physical fitness that is needed in all activities that require rapid changes in body position and its parts (Fenanlampir, 2015). Agility also refers to a person's ability to quickly and precisely change the direction and position of their body when moving, without losing their balance, according to the situation and circumstances that a person faces in a particular field. Agility can usually be recognised by the ability to move quickly and change direction or position. The ability to change quickly and in a relatively short period of time, depending on the circumstances and conditions. Futsal players also need agility in changing direction and position quickly in order to run faster than their opponents and score goals. This exercise is one form of exercise commonly used to improve running skills in futsal matches.

Based on the results of observations of researchers conducted on January 24, 2024, researchers saw that when students played futsal, many lacked agility, and were seen from the data obtained from the coach. Researchers also obtained information that students at SMK Yadika Bandar Lampung, which is located on Jl. Soekarno-Hatta, Labuhan Dalam, Kec. Tj. Seneng, Bandar Lampung City, Lampung. There are various extracurricular activities, one of which is futsal extracurricular activities. Students at SMK Yadika Bandar Lampung are interested in futsal extracurricular activities, and futsal coaches also strongly support students to excel in sports, especially futsal. Furthermore, researchers interviewed coaches when students are practicing futsal, and many students who take part in futsal extracurricular activities lack agility. This was seen during interviews and observations made by researchers.

Based on the above background, the researcher intends to conduct further research on agility with research entitled “The Effect of Ladder Drill Training on Increasing the Agility of Futsal Extracurricular Students of SMK Yadika Bandar Lampung”.

Theory and Method

This research uses experimental research. Experimental research is part of quantitative research that involves variables to determine the causes and effects that are deliberately caused by these variables (Santoso, 2021). The research design uses a One Group Pretest-Posttest Design, which means that the results of the treatment can be known more accurately, because it can be compared with the conditions before treatment (Sugiyono, 2023).

Findings and Discussion

This study aims to determine whether or not ladder drill training has an effect on increasing the agility of extracurricular futsal students of SMK Yadika Bandar Lampung. The results of the study were obtained based on the results of the pretest and posttest data of the hexagonal obstacle test on extracurricular futsal participants of SMK Yadika Bandar Lampung. This research was conducted for 2 months, Treatment was carried out 16 times, including pretest and posttest. Each of these data points is described as follows.

The data description used to analyse the data is the hexagonal obstacle test on all existing samples; the research data includes pretest and posttest data from the experiments carried out. This section will present research data in the form of pretest and posttest hexagonal obstacle test data.

No	Nama	Pre- Test Secs	Kriteria	Post- test Secs	Kriteria	Selisih
1	AI	19.40	SK	12.41	B	6.99
2	PN	20.71	SK	13.15	B	7.56
3	FD	18.13	SK	12.51	B	5.62
4	KD	21.15	SK	16.71	K	4.44
5	RJ	20.35	SK	17.15	K	3.2
6	IL	21.51	SK	18.15	SK	3.36
7	GN	20.54	SK	16.40	K	4.14
8	AN	23.61	SK	15.75	K	7.86
9	SA	22.31	SK	18.31	SK	4
10	VA	20.31	SK	15.81	K	4.5
11	RB	22.55	SK	17.18	K	5.37
12	EV	21.41	SK	17.24	K	4.17
13	ZI	19.54	SK	16.35	K	3.19
14	AD	20.34	SK	18.51	SK	1.83
15	DM	20.15	SK	16.38	K	3.77
16	DI	23.35	SK	17.31	K	6.04
<i>Mean</i>		20.96		16.20		
<i>Std. Deviation</i>		1.46		1.92		
<i>Minimum</i>		18.13		12.41		
<i>Maximum</i>		23.61		18.51		

From the table above, the mean (average) pretest and posttest agility shows a difference; the pretest is 20.96, while the posttest is 16.20. This shows that there is an increase in agility in the futsal extracurricular of SMK Yadika Bandar Lampung.

Prerequisite Test Results

1. Normality Test

The normality test is carried out to determine which statistical test is suitable for answering the research hypothesis. The calculation of this normality test uses Kolmogorov-Smirnov Z, with processing using the help of the SPSS 25 program. The following table shows the results of the calculation to determine the normality results.

Data	KSZ	Statistic	Sig
Pretest	0,200	0,130	0,5%
Posttest	0,039	0,219	0,5%

From the results of the table above, it shows that the pretest and posttest data obtained a sig (p) value > 0.05 , which means that the research data is normally distributed.

1. Homogeneity Test

Homogeneous test is useful for testing the similarity of samples, namely samples that are homogeneous or not variants taken from the population. If the significance is > 0.05 , then the data is homogeneous; if the significance value is < 0.05 , then the data is not homogeneous. The results of the homogeneity test of this study can be seen in the table below:

Data	P	Sig	Keterangan
Pretest	0,842	0,5%	Homogen
Posttest	0,005	0,5%	Homogen

Based on the results of the Haxagonal Obstacle Test, the calculated significance value > 0.05 , then the results obtained can be concluded that the variance is homogeneous.

1. Hypothesis Test

The t-test in this study is used to answer the hypothesis that has been proposed. Based on the expected test results, the research data is normal and homogeneous, so the analysis used to test the hypothesis is a t-test using one sample t-tests. The results of the hypothesis test (t-test) can be seen in the table below:

Variabel	Mean	Df	T-Hitung	T-Tabel	P
Pretest-Posttest	4,752	15	11,218	1,753	0,000

Based on the data calculation above, the value of t count (11.218) $>$ t table (1.753) and P (0.000) $<$ (0.05). These results show that the calculated average of 4.752 t value is

greater

than t table and significance are less than 0.05, so these results show that there is a significant difference.

Conclusion

Based on the results of the study, it shows that the proposed hypothesis can be accepted, which means that the following conclusions are obtained: The results of the t-test can be seen that t count is greater than t table ($11.218 > 1.753$) and the significance value of p ($0.000 < 0.05$) the results show that there is a difference between the pretest-posttest results of ladder drill training on increasing the agility of extracurricular futsal students of SMK Yadika Bandar Lampung, with an average pretest result of 20.96 while the posttest is 16.20.

Abstract

This study aims to find out the impact of Ball Feeling Training on the Extracurricular Futsal Dribbling Skills of 1st Trimurjo State High School. This research is an experimental research, with a One Group Pretest–Posttest Design research design, that is, a research design that has a pretest and posttest, so that the effects of treatment can be calculated by comparing the values of pretests and posttests. Sampling technique uses saturated sampling in which the entire population is sampled, which is a total of 16 people. The instrument used in this study is a ball-turning test, while the treatment was given as a ball-feeling exercise with some modifications. The data analysis technique used in this study is the test-t. Based on the calculations obtained, the average time spent on the test to swing the ball after the treatment is faster than the mean time spent in the ball swing test before the treatment. On the practice method, ball feeling t count obtained a value of 23,363 and t table 1,753 with a significance of 0,000, in other words, it can be concluded that $t \text{ count} > t \text{ table} = 23,363, > 1,753$, with the significance value of $0.000 < 0,05$. From the results of research and discussion can be drawn the conclusion that there is a significant influence of ball feeling training on the extracurricular futsal dribbling skills of 1st Trimurjo State High School.

Keyword *ball feeling, dribbling skill*

Introduction

Sport comes from the word “olah” which means motion and “raga” which means body. Sport is an activity that uses physical elements in order to obtain excitement and restore physical and mental health. There are many benefits that can be obtained from sports, such as maintaining a healthy body, preventing various diseases, and improving physical health. According to (Yudho, 2022) sport is a physical activity that involves the whole body or certain parts of the body with the aim of being healthy, fun and able to obtain achievements. Meanwhile, according to (Said & Galih, 2023) Sport is a necessity of life to achieve fitness and health. It aims to keep the body healthy and able to carry out daily activities without feeling significant fatigue.

Sport not only acts as a tool to maintain mental and physical health, but also as education in the aspects of sportsmanship, cooperation, and as a platform to develop self-discipline which is applied through sports achievement. Achievement Sports is a type of physical activity that cares for and develops athletes in a planned, systematic, integrated, tiered and sustainable manner through competition, with the aim of achieving achievements supported by sports knowledge and technology. One of the achievement sports is futsal. Futsal sport is a game sport involving two teams, where each team consists of 5 players consisting of 1 goalkeeper and 4 players who usually occupy the position of anchor, right or left flank, and pivot. In Indonesia, futsal sport has experienced a very significant development, a sign of this development can be seen from the abundance of futsal competitions held starting from the general level, students, students, to include professional leagues (Sutiana et al., 2020).

According to (Saputra, 2023) Futsal is a type of sports game involving five players in one team, with certain rules and regulations. The winner in a futsal game is determined by the team that scores the most goals. Futsal is a type of sport that aims to attack the opponent's defense by scoring goals into the opponent's goal. This sport teaches the concept of playing with fast ball circulation, attack and defense strategies, as well as coordination of players without the ball or precise timing (Yerianto Manuk et al., 2023). Similar to other sports, futsal also has basic techniques that must be mastered properly by each player.

This is because, in a futsal game, the ability to not keep the ball for too long, maintain a fast and high intensity of play, and involve strong defense and organized attack patterns. According to (Saputra et al., 2019) The ability in basic techniques is one of the important foundations for someone to be involved in playing in a game. There are several basic futsal techniques according to (Rachman et al., 2021), these techniques include: passing the ball (passing), chipping, dribbling, holding the ball (control), and shooting the ball (shooting). Dribbling technique is considered the most important aspect in futsal games because according to (Riduan et al., 2020) dribbling techniques are always used in futsal games to help apply tactics and techniques when practicing or competing.

Dribbling is a way of carrying the ball with the feet from one place to another with the aim of entering the ball into the opponent's goal and passing the opponent to save the

ball from control of the ball by the opposing player (Hidaya et al. 2022). Mastering the dribbling technique is a key skill in futsal, as each player needs to be able to control the ball while moving, standing, or preparing to make a pass or shot (Matitaputty, 2019). In this game a player is required to have the ability to control the ball to outwit his opponent. To support dribbling skills, there needs to be a form of training support, one form of dribbling training support is ball feeling training.

According to (Febrian, 2021) Ball feeling training is a type of individual ability training in which players use parts of their feet to organize, process, and direct the feeling of the ball. With the aim of practicing “feel” for the ball, making it easier for players to control the ball (Rachman et al., 2021). The following forms of ball feeling exercises include: holding the ball on the instep, rolling the ball with the sole of the foot, holding the ball low between the legs with the inside foot, and holding the ball in the air with the inside foot, outside foot and instep (Ansori et al., 2022). In the context of futsal, a player is expected to have the ability to feel the ball with the foot effectively (Fauzi, 2022).

In general, futsal is also applied in the school environment in the form of extracurricular activities, with the aim of providing students with additional experience, developing special skills, broadening horizons, and assisting in developing student character. Extracurricular activities themselves are activities or programs that are carried out outside the main lesson hours at school. With extracurricular activities, students are expected to achieve achievements, especially in the field of sports by participating in futsal competitions or championships such as inter-school futsal championships, provincial student championships and even national student championships.

SMA Negeri 1 Trimurjo is one of the public high schools in Central Lampung Regency. This school not only focuses on activities in the academic field, but is also active in activities in the non-academic field, such as extracurricular activities which are still active, namely futsal, basketball, taekwondo, scouts, pmr, English club and others. The most popular extracurricular activities are sports extracurriculars, especially futsal. Futsal is the sport with the most participants compared to other sports.

Based on the results of observations and interviews with coaches on January 8 2024, researchers saw that when students played futsal, many students lacked control of the ball when dribbling such as, students easily lost the ball, ball control which was still very weak, unstable movement and it seemed that some students also lacked confidence so that the opponent easily grabbed the ball. And seen from the data provided by the coach, the results of dribbling futsal extracurricular students of SMA Negeri 1 Trimurjo with a total of 16 students, the results show that the average value of student dribbling is 18.15, the maximum value is 19.97 with a very poor category and the minimum value is 16.93 with a poor category. With the results of this test data, it shows that futsal extracurricular

students at SMA Negeri 1 Trimurjo are in the category of very lacking in dribbling the ball so that they need an exercise model to train dribbling skills, namely ball feeling. In this study, researchers chose the ball feeling training method, because this ball feeling exercise aims to introduce the ball with our body parts and is expected to improve ball control skills. If the basic technique (foundation) in playing futsal is good, then the player will have no difficulty in playing futsal.

Based on the above background, the researcher intends to conduct further research on dribbling skills with a study entitled “The Effect of Ball Feeling Training on Futsal Extracurricular Dribbling Skills of SMA Negeri 1 Trimurjo”.

Theory and Method

This research uses experimental research. According to (Sugiyono, 2023) Experimental research is defined as a research method used to determine the effect of independent variables on dependent variables under controlled conditions. The design used in this study is the One Group Pretest-Posttest Design research design, which is a research design that has a pretest and posttest, so that the effect of treatment can be calculated by comparing the pretest and posttest values (Sugiyono, 2023).

Findings and Discussion

This research uses experimental research methods, namely the provision of ball feeling training models on the dribbling skills of futsal extracurricular SMA Negeri 1 Trimurjo. Overall this research was conducted in three stages. The first stage is the collection of initial data or pretest, the goal is to determine the ability of the sample before being given treatment (treatment). Furthermore, the second stage of the experimental group was given a ball feeling training model. And for the third stage, namely the final data collection (posttest) with the aim of measuring the final ability of the sample after being given treatment and following the training program. The data description used to analyze the data is a dribbling test on all existing samples, the research data includes pretest and posttest data from the experiments carried out. This section will present research data in the form of pretest and posttest dribbling test data

Hasil Tes Variabel	N	Minimum	Maksimum	Mean	Std. Deviation
<i>Pretest</i>	16	16,55	19,48	17,65	0,97
<i>Posttest</i>	16	14,31	16,79	15,36	0,76

From the table above, the results obtained before giving the ball feeling training model (pretest) are as follows: the mean is 17.65, the standard deviation is 0.97, with the lowest time result reaching 16.55 and the highest time result reaching 19.48. After being given the ball feeling training model (posttest), the results obtained were a mean of 15.36, the standard deviation was 0.76, with the lowest time result reaching 14.31 and the highest time result reaching 16.79.

1. Normality Test

The normality test is used to determine whether the variables in the study have a normal or abnormal distribution. The results of the normality test calculation are presented in the following table:

Data	Statistic	KSZ	Sig
<i>Pretest</i>	0,226	0,028	0,05
<i>Posttest</i>	0,126	0,200	0,05

From the results of the table above, it shows that the data obtained a Sig (p) value > 0.05 , it can be concluded that the variables are normally distributed.

2. Homogeneity Test

The homogeneity test is carried out to test the similarity of the sample, namely whether the sample variants taken from the population are uniform or not. The homogeneity test criteria are, if the significance > 0.05 then the data is homogeneous while if the significance value < 0.05 then the data is not homogeneous. The results of homogeneity testing are shown in the following table:

Kelompok	P	Sig	Keterangan
<i>Pretest</i>	0,016	0,05	Homogen
<i>Posttest</i>	0,287	0,05	Homogen

Based on the results of homogeneity testing obtained, all data obtained, the p value (sig.)

> 0.05, it can be concluded that the data in this study are homogeneous.

3. Hypothesis Test

Hypothesis testing is used to answer the hypothesis that has been proposed. Based on the expected t-test results, the research data is normal and homogeneous. The partial analysis is shown in the following table:

Kelompok	Mean	Df	T-Hitung	T-Tabel	Sig (2 tailed)
Pretest - Posttest	2,290	15	23,363	1,753	0,000

The results of the t test can be seen that t count (23.363) and t table (1.753) with a significance value of p of 0.000, because t count 23.363 > t table 1.753 and a significance value of 0.000 < 0.05, then these results indicate there is a significant difference.

Conclusion

Based on the results of the research conducted, it is concluded that the group given the ball feeling training method has a significant increase with a t value of 23.363 > t table 1.753 and a significance value of 0.000 < 0.05. This shows that the average travel time of the ball dribbling skill test after treatment is faster, which means that there is an increase in ball dribbling skills in extracurricular futsal students of SMA Negeri 1 Trimurjo.

maytri_cahyaningrum@teknokrat.ac.id¹, reza_adhi_nugroho@teknokrat.ac.id²

Universitas Teknokrat Indonesia^{1 2}

Abstract

This research is to determine whether there is a significant influence of the results of cardboard jump training on the results of lay-up abilities of students in Extracurricular Basketball. The research method will use the experimental method, the design used is a One Group Pretest-Posttest Design, and the instrument used is Lay-up. The sample is 15 students with a purposive sampling technique, namely, the sample is selected with certain considerations. Based on (1) normative data on the assessment of the test instrument, the average value of the initial test (pre-test) was 4, and the average value of the final test (post-test) was 6.866666667. The initial standard deviation value of the test is 1.069044968, and the final standard deviation of the test is 1.597617273. (2) Then the minimum value of the initial test is 2, and the final test is 4. And the maximum value of the initial test is 6, and the final test is 10 Based on research on the effect of cardboard jump training on the lay-up ability of extracurricular basketball students at SMAN 1 Sukoharjo, several conclusions can be drawn as follows: Increased Ability Cardboard jump training significantly increases students' lay-up ability. (3) Based on the data, the average value of students' lay-up ability increased from 4.00 in the pre-test to 6.87 in the post-test after 16 training sessions using cardboard media. Statistics and Analysis The results of the hypothesis test show a Sig. (2- 2-tailed) value of 0.000, which is smaller than the P value (0.05), so H_0 is rejected and H_a is accepted. This indicates that cardboard jump training has a positive and significant effect on increasing lay-up ability.

Keywords: *basketball, cardboard, lay-up*

Introduction

Sport is a form of human movement behavior that is applied in certain sports that have different tendencies and goals, so that sport is a phenomenon related to the social life of everyone. According to Mahfud (2020), basketball is a team sport that requires team cohesiveness in playing, which is played by 2 teams of 5 players each. The goal of each team is to score the opponent's basket and try to prevent the opposing team from scoring, according to Sanjaya (2022). Basketball games can be played in indoor or outdoor spaces, but are more effective in indoor spaces. According to Saputra (2020). A lay-up shot is one of the movements that is usually used to score points in basketball games during a lightning attack (Mertayasa et al., 2016).

Cardboard is one of the used items that can be found anywhere, even though cardboard media is an effective learning tool because it is easy to move, and many variations of games can be arranged using cardboard. Medical cardboard is a simple tool that is very cheap and easy to obtain. By utilizing the cardboard media, it is hoped that it can attract students, so that it also indirectly improves basketball extracurricular students in improving their ability to lay up.

The research that is relevant to the research is a study conducted by (Muhammad Ade, 2022) from the Physical Education Study Program, Muhammadiyah Palopo University entitled "Improving Lay Up Learning Outcomes in Basketball Through the One-Two Step Approach in Class VIII-2 at SMPN 2 Lamasi" where in this study the researchers raised problems related to the methods used in learning that were less varied or based on overall material only. The purpose of this study was to determine the Improvement of Learning Outcomes of Basic Lay techniques in Basketball Through the one-two-step approach in Class VIII-2 Students at SMPN 2 Lamasi. This research is a class action research with a total of 30 research subjects, consisting of 17 men and 13 women.

In this study, the authors will conduct experiments on extracurricular students of SMA N 1 Sukoharjo by using a form of cardboard jumping training to determine whether or not there is an influence on the lay-up ability of extracurricular students of SMA N 1 Sukoharjo. As explained, 2 hypotheses arise in this study. Namely, H_a : There is an effect of cardboard jumping training on the results of the lay-up ability of extracurricular students of SMAN 1 Sukoharjo. H_o : There is no effect of cardboard jumping training on the lay-up results of extracurricular students of SMAN 1 Sukoharjo.

Theory and Method

The research method will use the experimental method, the experimental method can be interpreted as a research method used to find the effect of exclusive treatment on others under controlled conditions. The design that will be used in this study is One Group Pretest-Posttest Design. The population in this study are basketball extracurricular participants at SMAN 1 Sukoharjo 20 students. The sample taken consisted of 7 boys and 8 girls who participated in basketball extracurriculars at SMA N 1 Sukoharjo.

Findings and Discussion

The research method will use the experimental method, the experimental method can be interpreted as a research method used to find the effect of exclusive treatment on others under controlled conditions. The design that will be used in this study is One Group Pretest - Posttest Design, The population in this study are basketball extracurricular participants at SMAN 1 Sukoharjo 20 students.

The sample taken consisted of 7 boys and 8 girls who participated in basketball extracurriculars at SMA N 1 Sukoharjo.

Prerequisite Test

Normality Test

The normality test in this study is used to determine whether a distribution is normal or not. The normality test in this study used the Shapiro- Wilk test. with SPSS 26 Program. The results of the normality test can be seen in the table below:

Variable	P	Sig	Ket.
<i>Pre-Test</i>	0,05	0,316	Normal
<i>Post-Test</i>	0,05	0,414	Normal

According to the table above, the pre-test Sig value for the Lay Up Shoot test is 0.316 and the post-test Sig value is 0.414. While the P value in this study is 0.05 and the data can be considered normal if the Shapiro-Wilk Sig value is greater than the P value. As a result, the pre-test and post-test Lay Up Shoot test values are nor- mally distributed.

Homogeneity Test

The homogeneity test assesses the similarity of samples that are considered the same or uniform. If the P value is greater than 0.05 indicates that the sample or data is homogeneous, while if the P value is less than 0.05 indicates that the sample or data is not homogeneous. The results of the homogeneity test in this study are in the table below:

Variable	P	Sig	Ket.
Based on Mean	0,05	0,198	Homogen

According to the table above, the P value in this study is 0.05, which means that the data will be homogeneous if the Sig value is greater than the P value. The Sig value for data based on the average value (mean) above is 0.198, which means that the value of 0.198 is greater than 0.05.

Hypothesis Test

The t-test in this study is intended to answer the hypothesis that has been pro- posed. The results of hypothesis testing (t-test) can be seen in the table below:

Varia- bel	Mean	Df	T-hi- tung	T-tabel	Sig (2- tailed)
Pre-test	4,00	14	9,352	1,76131	0,000
Post test	6,87	14			0,000

The table above shows that the average post-test value of the Lay Up Shoot test of all basketball members is 4.00 in the pre-test and 6.87 in the post-test. The following hypothesis testing results will be compared using the mean difference test formula (t test) or Paired Sample T Test. The mean difference test (t test) will produce conclusions about the results of the hypothesis to be used in this study. Based on the results of the t-test analysis of Vo2Max in extracurricular basketball participants at SMAN 1 Sukoharjo with cardboard jump training, the calculated t value ($9.532 > t$ table (1.76131) was obtained, and these results indicate that cardboard jump training has a significant effect on the lay-up ability results of extracurricular basketball students at SMAN 1 Sukoharjo.

Conclusion

Based on the results of research and discussion, it can be concluded that, with the application of the cardboard jump training form can improve the ability to lay up, with the results of research that has been carried out improving the lay up ability of extracurricular students of SMA N 1 Sukoharjo with an increase from 4.00 in the pre-test to 6.87 in the post-test after 16 training sessions using cardboard media. Statistics and Analysis The results of the hypothesis test showed a Sig value. (2- tailed) of 0.000, which is smaller than the P value (0.05), so H_0 is rejected and H_a is accepted. In the pre- test, no students were in the good category, with most being in the moderate and deficient categories. However, after the treatment, most students had improved to the good category, demonstrating the effectiveness of the exercise.

The Effect of Triangle Passing Training on The Passing Accuracy of Men's Futsal Extracurricular SMK N 1 Bandar Lampung

Nadisa Alifia Syahputri¹, Imam Mahfud²

nadisaputri93@gmail.com¹ , imam_mahfud@teknokrat.ac.id²

Universitas Teknokrat Indonesia^{1,2}.

Abstract

The purpose of this research is to determine how the form of passing triangle exercises affects the accuracy of passing in extracurricular futsal for male students of SMK N1 Bandar Lampung. Using the experimental method of "one-group pre-test-posttest design," the sample for this study consisted of 20 individuals selected through a saturated sampling technique, as the entire population was used. The research findings indicate that (1) Passing triangle exercises have a significant influence on passing accuracy with a Sig. value (2-tailed) < P Value or $0.000 < 0.05$, thus rejecting H_0 and accepting H_a . (2) By assessing the extent of the influence of passing triangle exercises on passing accuracy using the t-test, it was found that the significant p-value is $0.000 < 0.05$, indicating a significant difference between pre-test and post-test accuracy of passing in the extracurricular futsal for male students of SMK N1 Bandar Lampung.

Keyword *passing triangle, passing accuracy, one-group experiment.*

Introduction

According to (Dwi & Gumantan, 2021), sports are activities that are carried out regularly, consisting of a warm-up, a main exercise, and then a cool-down. The term "sports" comes from the words "olah" and "raga," which means that sports are activities aimed at training the body. This is supported by the opinion of (Mahfud & Fahrizqi, 2020), who argue that sports are a form of human behavior carried out in a specific manner, with various branches of sports having different directions and goals, making sports a phenomenon that is relevant to the social life of every individual.

One of the sports that has direction and purpose is futsal. Futsal first entered Indonesia in the early 21st century, or the 2000s, and only gained recognition in PSSI in 2004. Although relatively new, futsal can attract the interest of many people because its gameplay is similar to soccer, which is easy to engage with and very enjoyable for anyone to play without needing a large space (Selatan, 2023).

The most fundamental futsal technique is passing. The passing technique may seem simple, but in reality, it requires concentration and good target accuracy to produce effective passes (Anbi & Alsaudi, 2021). Passing plays a dominant role because it has a fast tempo. Passing is done to organize attacks against the opponent's defense, neutralize the opponent's attacks, and can even be used to score goals against the opponent's goal. To play futsal, one must master the basic futsal techniques; to create the best futsal game, players must master the playing techniques. (Mahendra et al., 2022) state that an offense consists of passing, dribbling, and is concluded with shooting at the opponent's goal. The game scheme that the coach expects on the field involves executing attacks against the opposing team and taking advantage of every opportunity, whether through passing or shooting. (Hamzah & Hadiana, 2018).

Not only a few futsal players still lack in their passing technique, which is why proper training is needed to improve passing accuracy. Research by (Fadli et al. 2023) indicates that good and correct passing is essential in futsal, as mastering this technique can facilitate the team's victory in a match. A similar point was expressed by (Harjanto, 2019) that accurate passing can be utilized by the team to change the game, break through defenses, and overcome deadlocks when facing tactics already established by the opponent. One way to create opportunities and goals against the opponent's goal must first go through the passing phase; therefore, accuracy is very much needed by a player (Alkhadaaf & Syafii, 2019).

There are several studies that are relevant to this research. The first study was conducted by (Nerwi Aditya & Faruk 2019), aiming to determine the effect of triangle passing drills on accuracy in soccer for friends U-14. Next, (Manik & Targan 2022) conducted

research to find out the impact of diamond passing and tri- angle passing drills on the passing accuracy of soccer players from SSB Porkam

Deli Serdang aged 10-15 years. In addition, the research conducted by (Zaenal et al. 2019) aimed to determine the effect of triangle training on passing skills in the extracurricular program at SMA Negeri 5 Palopo. From the presentation above, this serves as the background for this research to investigate the influence of the triangle passing drill on the passing accuracy of the extracurricular futsal team of male students at SMK N1 Bandar Lampung.

In this study, the author will conduct an experiment on the male futsal extracurricular students of SMK N1 Bandar Lampung using a triangle passing drill to determine whether or not it has an effect on the passing accuracy of the male futsal extracurricular students of SMK N1 Bandar Lampung. The author will use 7 forms of triangle passing drills to improve the passing accuracy of the male futsal extracurricular students of SMK N1 Bandar Lampung. As explained, two hypotheses emerge in this research. H1: There is an influence of the triangle passing training method on the passing accuracy of the extracurricular futsal for male students at SMK N1 Bandar Lampung. H2: There is no influence of the triangle passing training method on the passing accuracy of the extracurricular futsal for male students at SMK N1 Bandar Lampung.

Theory and Method

The method used in this research is experimentation. (Ardiansyah et al., 2023) state that "Experimental research is research conducted rigorously to clarify the cause-and-effect relationship between variables." The aim of experimental research is to investigate the potential cause-and-effect correlation between the variables being studied. In this context, the triangle passing training method will be applied to the experimental group. The design used is the "One Group Pretest – Posttest Design," which means this research is designed with a pretest conducted before the treatment is given, allowing for a comparison with the condition prior to the treatment. Then, a posttest is administered after the treatment to evaluate the final results.

Findings and Discussion

The researchers conducted a series of initial tests (pretests), treatment, and final tests (posttests) on the male futsal extracurricular students of SMK N1 Bandar Lampung to determine the accuracy level of the players' passing, involving a total of 20 male futsal extracurricular students from SMK N1 Bandar Lampung. The results of the initial test (pretest) and the final test (posttest) can be seen in the table below.

No	Nama	L/P	Nilai Pretest	Nilai Posttest
1.	RG	L	31	32
2.	AK	L	28	30
3.	NA	L	35	37

4.	RS	L	27	28
5.	AR	L	36	38
6.	RM	L	30	32
7.	DDR	L	28	30
8.	SR	L	25	26
9.	FK	L	32	34
10.	DP	L	34	36
11.	BP	L	29	31
12.	DN	L	24	27
13.	IA	L	31	33
14.	NR	L	27	29
15.	KA	L	31	32
16.	AA	L	26	27
17.	MF	L	25	29
18.	PN	L	26	28
19.	ET	L	29	31
20.	YA	L	25	26
MEAN			28,95	30,8
STANDAR DEVIASI			3,501503436	3,51837283
MIN			24	26
MAKS			36	38

Based on the normative data from the assessment instrument test, the average score for the initial test (pretest) was 28.95, while the average score for the final test (posttest) was

30.8. The standard deviation for the initial test (pretest) was 3.501503436, and the standard deviation for the final test (posttest) was

3.51837283. The minimum score for the initial test (pretest) was 24, and for the final test (posttest), it was 26. Lastly, the maximum score for the initial test (pre- test) was 36 (good category), and for the final test (posttest), it was 38 (good cate- gory). This data was presented in the following bar chart:

Normality Test

Before conducting a t-test, researchers must ensure that the data analyzed using SPSS 26 has a normal distribution; therefore, the only normality test is the test for distribution normality. Because the sample data used is no more than 50, the Shapiro-Wilk test is used to analyze this data. This result can be shown in the table below:

Variable	P	Sig	Keterangan
<i>Pre-Test</i>	0,05	0,309	Normal
<i>Post-Test</i>	0,05	0,335	Normal

According to the table above, the Sig value for the pre-test of the passing accuracy test is 0.309 and the Sig value for the post-test is 0.335. Meanwhile, the P value in this study is 0.05, and the data can be considered normal if the Sig value of Shapiro-Wilk is greater than P. As a result, the passing accuracy test values for both the pre-test and post-test are normally distributed.

Homogeneity Test

The Homogeneity Test is useful for evaluating the similarity of samples that are considered uniform or the same. If the P value is greater than 0.05, then the test or data is considered homogeneous; however, if the P value is less than 0.05, then the test or data is considered non-homogeneous. The result of the homogeneity test in this study can be shown in the table below:

Variable	P	Sig	Keterangan
<i>Based on Mean</i>	0,05	0,937	Homogen

According to the table above, the P value in this study is 0.05, which means that the data will be homogeneous if the Sig value is greater than the P value. The Sig value for the data based on the average (mean) above is 0.937, which means that 0.937 is greater than 0.05. Therefore, the pre-test and post-test values for the passing accuracy test indicate that the data is homogeneous or the same. Therefore, the research can continue.

Hypothesis Testing

In this research, the researcher uses hypothesis testing for a single correlated sample group, which can be referred to as the experimental class. This test is called the Paired Sample T Test in SPSS. Then, pre-test and post-test were conducted on the passing accuracy test in the experimental class. Here is the table of hypothesis test results:

Rata-Rata	Df	P	Sig (2-tailed)
1,850	19	0,05	0,000

Based on the calculations, the data shows that the average is 1.850 and is significant at less than 0.05.

Conclusion

Based on the results of data analysis, descriptions, research findings, and discussions, it can be concluded that the implementation of the passing triangle training method can improve passing accuracy. The research conducted has shown a significant effect on the passing accuracy of male futsal extracurricular students at SMK N1 Bandar Lampung, with an average increase of 1.850 from before the treatment (passing triangle) at 28.95 to after the treatment (passing triangle) at 30.8, as evidenced by a significant value of 0.000 < 0.05.

Abstract

This study investigates the translation strategies employed by university students when translating narrative texts from a source language (SL) to a target language (TL), highlighting translation as a tool that enhances language acquisition. Translation serves as a cognitively demanding task that allows students to engage more deeply with both linguistic forms and meanings, ultimately fostering a better understanding of the foreign language. Using a descriptive qualitative approach, data were collected through questionnaires and interviews. The questionnaires identified the students' strategic preferences, while the interviews explored how those strategies were implemented in practice. The findings revealed that students employed seven primary strategies: Direct Translation (Literal Translation), Transposition, Modulation, Equivalence, Adaptation, Omission, and Addition. Among these, Direct Translation and Equivalence emerged as the most frequently used, indicating students' efforts to preserve the source text's meaning while adapting it to the linguistic and cultural norms of the TL. Students' rationale for using specific strategies included maintaining the integrity of the original title, enhancing reader comprehension without altering meaning, using dictionaries for word selection, simplifying vocabulary, relying on contextual cues, using pronouns strategically, modifying sentence structures while preserving meaning, and adapting words commonly used in English and Indonesian. These strategies reflect both linguistic awareness and contextual sensitivity. Ultimately, the study demonstrates that students apply a range of translation strategies with clear, purposeful reasoning, contributing to more accurate and culturally appropriate translations. The research offers insights into how translation can support language learning through strategic decision-making and context-based problem-solving.

Keyword Translation Strategy, Narrative Text Translation

Introduction

Translation is a crucial aspect of language learning, particularly when students are required to translate narrative texts from one language to another. In Indonesia, where English is a widely used language, students of English Education Study Programs face significant challenges in translating narrative texts from English into Indonesian. This is because narrative texts often involve complex linguistic structures, idioms, and cultural references that can be difficult to convey accurately in the target language. The process of translation involves a range of cognitive and linguistic skills, including the ability to comprehend the source text, identify the intended meaning, and convey that meaning effectively in the target language. In the context of translation from Indonesian to English, this process can be particularly challenging due to the differences in linguistic and cultural contexts between the two languages. Narrative texts, in particular, present a unique set of challenges for translators, as they often rely on cultural references, idiomatic expressions, and subtle nuances of meaning that can be difficult to convey across languages.

Translating narrative texts poses unique challenges compared to other types of texts due to the presence of literary devices, cultural references, idiomatic expressions, and stylistic elements. Students may struggle with capturing the tone, mood, and style of the original text while ensuring accuracy in conveying its meaning. Additionally, cultural differences between languages can complicate the translation process, requiring students to possess not only linguistic skills but also cultural competence.

In recent years, there has been a growing interest in the study of translation strategies employed by students in translation tasks, particularly in the context of language learning and teaching. This interest stems from the recognition that understanding the strategies used by students can provide valuable insights into their cognitive and linguistic abilities, as well as the effectiveness of translation instruction.

Recent studies have highlighted the importance of understanding students' translation strategies in overcoming these challenges. For instance, a study was conducted to analyse the strategies used by students to translate English idioms into Indonesian in narrative texts [1]. The study found that paraphrasing was the most dominant strategy, followed by translating with similar meaning and form. However, the study also revealed that students

faced significant difficulties in recognizing idioms, finding closest meanings, and dealing with differences in context and frequency of idiom use. Another study focused on students' equivalence in translating English narrative texts into Bahasa Indonesia [2]. The study found that more than half of the students had good equivalence in translating narrative texts, but some students still struggled with difficulties in translating the texts and transferring the meaning from the source text to the target text.

Furthermore, analyzing students' translation strategies can inform the development of more effective translation pedagogy and improve the overall quality of translations produced by students. This is particularly surprising given the growing importance of English as a global language and the increasing need for effective communication across linguistic and cultural boundaries. Therefore, this study aims to investigate the translation strategies employed by students when translating narrative texts from Indonesian to English, with a focus on identifying the most common strategies used and the factors that influence their choice of strategy.

Young learners have difficulty using the appropriate words in context, which presents a further barrier to vocabulary growth [3]. Unfortunately, most young learners struggle to differentiate between words if their teacher does not teach them to use proper words in context. This is a rather regular phenomenon. However, when young students mature into adult learners, failure could be exploited in their daily activities, which is a regular concern [4]. The second issue is that learners frequently translate the material literally and are unable to comprehend its meaning. Students struggle to convey the meaning from the first language to the target language since narrative writings frequently contain idioms, making it challenging for them to remember the unspoken meaning. As caused by this, the student translation for the language of the target is incorrect.

Despite the importance of this topic, there is a significant lack of research on the translation strategies employed by students when translating narrative texts. This is particularly surprising given the growing importance of English as a global language and the increasing need for effective communication across linguistic and cultural boundaries. Therefore, this study aims to investigate the translation strategies employed by students when translating narrative texts from Indonesian to English, with a focus on identifying the most common strategies used and the factors that influence their choice of strategy. And this study will find of (1) What are the common strategies used by students in translating narrative texts?, (2) What are the most common strategies used by students in translating narrative texts? and (3) How effective are these strategies in conveying the original meaning?

By examining the translation strategies employed by students, this study hopes to contribute to a deeper understanding of the cognitive and linguistic processes involved in translation and to inform the development of more effective translation instruction. Additionally, the findings of this study can provide valuable insights for language

teachers and translators, highlighting the importance of cultural awareness, linguistic sensitivity, and strategic thinking in the translation process.

Theory and Method

Translation, as a means of communication, has become an important activity in bridging these gaps. People receive a lot of information in various languages from different countries, which is then translated into their language. As a result, transferring is regarded as one of the most important means of connecting people all over the world. Students learning English as a foreign language may have issues in terms of grammar, inaccurate pronunciation, and a lack of vocabulary, which stops them from grasping the meaning of the words. Furthermore, when students tried to convert English to Indonesian, the differences between English and Indonesian grammatical systems occasionally confused them.

In the realm of translation studies, the exploration of translation strategies utilized by students has garnered significant attention, particularly within educational contexts. Scholars have delved into various aspects such as cognitive processes, decision-making mechanisms, and the impact of linguistic and cultural factors on translation quality [5]. The field recognizes that translation is not merely a linguistic transfer but a complex cognitive activity involving problem-solving and strategic decision-making [6].

Narrative texts pose unique challenges for translators due to their narrative structure, cultural nuances, and stylistic elements. Research has highlighted the importance of understanding narrative strategies, discourse coherence, and cultural references in achieving accurate and effective translations [7]. Moreover, the role of translators' cultural competence and their ability to navigate between source and target languages while preserving narrative integrity is crucial [8].

The analysis of students' translation strategies involves examining how learners approach the task of translating narrative texts. Research has identified various strategies employed by students, ranging from direct translation to adaptation and cultural mediation [9]. Factors such as language proficiency, prior knowledge of source and target cultures, and training in translation techniques significantly influence students' choices and effectiveness in translating narrative texts [10].

This qualitative case study explores students' translation strategies, a method of qualitative research that involves a detailed exploration of a program, event, or individual. The study uses various data collection methodologies and time constraints to gather detailed data over a long period. While case studies offer insights into real-world contexts and specific behaviours, they are sometimes criticized for their inability to generalize their findings. The case study method was frequently criticised for its lack of rigour and the researcher's proclivity for biased data interpretation [11].

The researcher conducted a descriptive analysis of data, identifying various student techniques for translating narrative texts and the most common strategies, and provided an explanation of the findings. Data are pieces of information gathered by the writer to answer a research question. Data are certain types of information that are frequently

collected by observation, examinations, and inquiries, or that are the result of human action for research purposes [12]. Talking about data, stated the types of data were classified as primary and secondary data, surveys, observations, experiments, questionnaires, personal interviews, and so on [13].

This study uses qualitative data collection methods, including a questionnaire linked to each variable's indicator, and interviews with college students of Sixth Semester English Education Study Program at Universitas Muslim Nusantara Al Washliyah. The questionnaire was distributed via Google Forms, making it a personal data source, and the study aimed to understand the impact of text translation and interviewing on students' understanding.

Findings and Discussion

The results indicated that all participants employed six out of the seven strategies when translating the narrative text [14]. (1) The subjects utilized seven strategies: Direct Translation (Literal Translation), Transposition, Modulation, Equivalence, Adaptation, Omission, and Addition. (2) The translation predominantly uses Direct Translation and Equivalence. These strategies ensure that the original meaning is preserved while making the text natural and culturally appropriate for the target audience. Transposition is also frequently used to adjust the grammatical structure to fit English norms better. (3) The students employed various strategies for different purposes. These strategies included maintaining the original title, ensuring that the reader can comprehend the text without altering its meaning, relying on dictionary definitions for word meanings, using simple vocabulary in sentences, translating sentences based on contextual clues, determining if pronouns can clarify the meaning and making necessary additions or deletions, altering sentence structure while preserving the original meaning, and making word adjustments commonly used in English.

The participants in the study were assigned the task of translating Indonesian narrative text into English. The students' translation results indicate that they employ diverse strategies when translating the text. The subjects utilized seven specific strategies: Direct Translation (Literal Translation), Transposition, Modulation, Equivalence, Adaptation, Omission, and Addition.

Title Translation:

- **Original:** "Teman Sejati"
- **Translation:** "Best Friend"
- **Strategy Used:** Equivalence. The translator uses a common English phrase that captures the essence of "true friend" or "loyal friend".

Sentence Structure and Direct Translation:

- **Original:** "Pada suatu hari di masa lalu, ada dua orang berteman dekat yang berjalan melewati hutan bersama-sama."
- **Translation:** "Once upon a time, in the past, there were two close friends who walked together through the forest."
- **Strategy Used:** Direct Translation. The structure is similar, and the translation maintains the original meaning.

Transposition:

- **Original:** "Mereka tahu bahwa di hutan bisa saja terjadi sesuatu yang berbahaya setiap saat."
- **Translation:** "They knew that something dangerous could happen in the forest at any moment."
- **Strategy Used:** Transposition. The sentence structure is adjusted slightly to fit English syntax better.

Modulation:

- **Original:** "Oleh karena itu, dari awal mereka saling berjanji bahwa mereka akan selalu bersama-sama meski dalam keadaan bahaya sekalipun."
- **Translation:** "So, from the beginning, they promised each other that they would always be together, even in times of danger."
- **Strategy Used:** Modulation. The idea is preserved, but the phrasing is slightly adjusted for naturalness in English.

Equivalence and Cultural Adaptation:

- **Original:** "Tiba-tiba, mereka melihat ada beruang besar yang semakin mendekat ke arah mereka."
- **Translation:** "Suddenly, they saw a big bear approaching them."
- **Strategy Used:** Equivalence. The term "beruang besar" is directly translated to "big bear," which is culturally appropriate in both languages.

Direct Translation with Minor Transposition:

- **Original:** "Tetapi sayangnya teman yang satu lagi tidak tahu bagaimana caranya memanjat pohon."
- **Translation:** "Unfortunately, the other friend didn't know how to climb trees."
- **Strategy Used:** Direct Translation with Transposition. The phrase is restructured slightly for clarity and natural flow in English.

Transposition and Equivalence:

- **Original:** "Jadi dia hanya terdorong oleh akal sehatnya, kemudian ia berbaring di tanah, menahan napasnya, dan berpura-pura menjadi orang yang sudah mati."
- **Translation:** "So, he just used his common sense and lay down on the ground, holding his breath and pretending to be dead."

- **Strategy Used:** Transposition and Equivalence. The sentence is rephrased for natural readability in English.

Direct Translation:

- **Original:** "Kemudian beruang itu datang dan mendekati orang yang sedang berbaring di tanah tersebut."
- **Translation:** "The bear then came closer and sniffed his ear, and slowly left the place because bears don't want to touch a dead person."
- **Strategy Used:** Direct Translation. The sequence of actions is maintained closely.

Omission and Addition:

- **Original:** "Setelah itu, temannya yang di pohon turun ke bawah dan bertanya kepada temannya yang berbaring di tanah itu, 'Teman, apa yang beruang bisikkan ke telingamu?'"
- **Translation:** "After that, his friend who was in the tree came down and asked his friend who was lying on the ground, 'Friend, what did the bear whisper to your ear?'"
- **Strategy Used:** Omission and Addition. The translation includes "Friend" twice to add clarity and natural dialogue flow.

Equivalence:

- **Original:** "Tadi beruang itu mengatakan kepada saya untuk tidak percaya terhadap teman palsu."
- **Translation:** "Just now, the bear told me not to trust fake friends."
- **Strategy Used:** Equivalence. The essence of the message is maintained using equivalent expressions in English.

Conclusion

The research findings indicate that the students employed diverse strategies when translating the narrative text. The most commonly employed strategy in translating narrative text was Direct Translation and Equivalence. The students employed various methods to translate the text, taking into account both the textual context and their own knowledge.

Abstract

Passing is the main component that is very important for playing football. Precision or accuracy in the context of sports is defined as the ability to direct something to a target. This research is an experimental study that aims to find the causes and effects of the treatment given, with two variables. Namely, the independent variable and the dependent variable, the independent variable is the target passing, and the dependent variable is the passing determination. Passing This study uses a variety of passing exercises using targets with the aim of increasing the quality of passing accuracy on the football team at SMP 17.1 Margomulyo Pesawaran. Data analysis uses three types, namely the normality test, the homogeneity test, and the hypothesis test.

Keyword *football, passing, accuracy*

Introduction

Sports can benefit those who are in good physical and mental condition, have a disciplined personality, and eventually develop into excellent people. If people are aware of the need for regular exercise and are ready to do so, they can accomplish a physically and psychologically healthy human state through physical education for those who attend school. Exercise becomes essential to maintaining the body's health and fitness for day-to-day functioning.

The community in Indonesia is very enthusiastic about the quick development of sports, and sports are growing there. In Indonesia, a wide variety of sports have grown in popularity, drawing large numbers of participants who play for fun, competition, to fulfill interests, or to maintain physical condition. Football is a popular sport among Indonesians, and it is one of them.

Soccer players must pass the ball to teammates and move rapidly while not carrying the ball. In soccer, passing is a fundamental move that is either dominant or is crucial to learn in soccer since it's the first fundamental skill that must be mastered before playing with the ball.

For students, mastering the basic passing technique can be fairly challenging. In order for the opposing team to score a goal during a soccer match, passing is one of the most important skills in the game. Proper passing and accuracy require frequent practice, which allows teammates to connect when they see one another in a position where they are not under the opponent's guard and have the chance to pass back to one another or shoot the ball into the opponent's goal. Based on observations and the coach's passing test results, Margomulyo Pesawaran's extracurricular soccer activities at SMP are covered in 17.1. After observing SMP 17.1 Margomulyo Pesawaran, data on student passing outcomes using the Johnson Soccer Test norms and the lack of variation in passing practice were requested. The key element that makes playing soccer so crucial is passing; in sports, precision is defined as the capacity to aim an action toward a certain target. The results of SMP 17.1 Margomulyo's extracurricular soccer passing show that there are only 16 male students overall, and their average passing score throughout 25.5 categories is low—the maximum value is only 20, and 30 is a lower minimum value.

Based on these findings, researchers will conduct a study titled *The Effect of Target Variation Passing Training on the Results of Passing Accuracy in Junior High School Football 17.1 Margomulyo Pesawaran*. This is because passing in SMP 17.1 Margomulyo Pesawaran falls into the category of less passing. It is intended that a range of target variation passing activities would ensure that players are never bored during training and that there is always some variation to keep them engaged. Researchers at SMP 17.1 Margomulyo Pesawaran hope to contribute to improving the standard of passing skill adjustments in extracurricular soccer.

Theory and Method

A population is a broad category made up of subjects or topics with particular qualities chosen by researchers for further investigation and subsequent conclusion-making. Based on the issues under investigation, the study's population, consisting of 16 male students who play extracurricular soccer at SMP 17.1 Margomulyo, will be examined. Saturated sampling is the method used in this study to establish whether or not the sample can include every member of the population (Sugiyono, 2017). From the complete population of 16 male soccer extracurricular students at SMP 17.1 Margomulyo, a sample was selected for study purposes.

A test instrument, according to Sugiyono (2017), is a device used to measure observed aspects of natural and social reality, particularly any facts that are purported to constitute research variables. A passing accuracy test is the test used in the data collection procedure. Ahmed Dimas; (2020) Effective teamwork is essential in this game and will determine the outcome of a soccer match. In addition to working together, players need to have a great deal of understanding and be able to use some fundamental game mechanics. In order to maximize athlete performance, coaches must plan and implement tactics to increase quality and have a well-defined program (Jihad & Annas, 2021).

Football is a game played by two teams, each team consisting of 11 players, who are commonly called teams. Each team tries to enter as many balls as possible into the opponent's goal and tries to defend its own goal so as not to enter the opponent's ball, in accordance with FIFA law of the game. (Agustina, Reki Siaga; 2020) Football is not only a lifestyle and an attractive spectacle for the community, but football is able to become a unifying tool for nations and countries (Luxbacher J, A. 2004: 11). To create a good game in a soccer game requires mastery of basic soccer techniques, the basic techniques of the game of soccer include passing (technique of passing the ball), control (technique of stopping the ball), dribbling (dribbling technique), shooting (technique of kicking or shooting the ball hard into the opponent's goal), heading (technique of heading the ball), intercepting (technique of grabbing the ball), sliding tackle (technique of sweeping the ball), throwing in (throwing-in technique), goal keeping (technique of catching the ball), and juggling (technique of holding the ball to train ball control) (Indarto, 2019).

According to Aris & Komaini (2019: 18), target passing training will improve the accuracy of inside leg passing. As a result, there is a great impact from this exercise, and if done with the right intensity, players will definitely be able to have good passing skills. Because one of the training models aimed at determining the level of accuracy is passing training with target modification. Poor passing and receiving skills will result in the release of the ball and waste opportunities to create goals (Ahmad Fahrevi et al., 2022). According to researchers, passing is very important because in soccer games many use passing so that this technique must be mastered well because it will make it easy for other friends to receive and control the ball and not be taken by opponents (Haloho & Sudarmono, 2021).

Passing accuracy training that is carried out continuously without any variation in different training models will cause boredom for players when training is carried out (Santoso Nurhadi, 2014). According to Michael et.al (2006: 4) “four to six weeks of high intensity power training is an optimal length of time for the CNS to be stressed without excessive strain or fatigue” which means four to six weeks of high-intensity training is the optimal time for training to experience stress without excessive strain or fatigue. One treatment that can significantly improve accuracy is the training method (Barbero-Alvarez et al., 2015).

Findings and Discussion

Pretest and posttest results from the conducted experiments are included in the description of the study data. Pretest and posttest results on soccer passing accuracy are presented in this section as study data. This part also includes the evaluation and interpretation of the implications of the findings, especially concerning the hypotheses. Whenever sub-points are needed, they must be arranged the way those in the method section above are organized.

No	Nama	Pretest	Kategori	Posttest	Kategori
1	D	29	Less	38	Good
2	F	22	Very Little	32	Medium
3	D	30	Less	35	Medium
4	W	33	Medium	37	Good
5	TF	24	Very Little	34	Medium
6	Y	26	Less	38	Good
7	R	20	Very Little	35	Medium
8	N	28	Less	31	Medium
9	R	26	Less	39	Good
10	D	26	Less	37	Good
11	S	24	Very Little	39	Good
12	E	32	Medium	36	Medium
13	S	23	Very Little	31	Medium
14	B	28	Less	34	Medium
15	A	26	Less	31	Medium
16	R	25	Less	37	Good

Table 1. Pretest dan Posttest

The pretest data has an average of 26.38, a maximum of 33, and a low of 20. The posttest data had an average of 35.25, a maximum value of 39, and a lowest value of 31. Swimmer test results

1. Normalitas Test

Finding out if the data derived from the actual test results follows a normal distribution or not is the aim of the normality test. Using the SPSS 25 software, Kolmogorov-Smirnov analysis was utilized to perform the variable normalcy test.

No	Statistic	Df	Signifikan
1	0,119	16	0,200

Table 2. Data Normality Test Results

2. Homogenitas Test

The purpose of the homogeneity test is to ascertain whether the data originates from a homogenous population or to ascertain the similarity of variance. If the significance is higher than 0.05, the decision criteria are approved.

Group	Levene Statistic	Df	Sig	Description
Pretest — Posttest	0,180	15	0,678	Homogen

Table 3 Homogeneity Test Results

According to the findings of the homogeneity test for the research variables, the significance value of 0.533 is higher than 0.05. Since the significance level is higher than 0.05, it is considered acceptable to use the data from homogeneous samples. It is possible to conclude that the population represented in the pre- and post-test data is homogeneous.

3. Hipotesis Test

To find out how goal-based success training affected students' attainment, hypothesis testing was done. Using the SPSS 25 application, test hypotheses using the t-test. The analysis's findings are displayed in the table below:

Average	Df	t Table	t Count	P
8,875	15	1,753	8,880	0,00 0

Table 4 Hasil Uji Hipotesis

The t-count (8.880) > t-array (1.753) and p (0.000) < ; (0.05) were determined by the t-test computation. The average, as indicated by this result, is 8.875.

Conclusion

t appears that the suggested hypothesis can be accepted based on the research findings from the data analysis that has been done. Consequently, the following deductions can be made: The results of the t test can be seen that the t count is greater than the t table ($8.880 > 1.753$) and the significance value of p is ($0.000 < 0.05$) these results indicate that there is a difference between the results of the pretest - posttest of the target variation passing exercise on the accuracy of passing in junior high school football 17.1 Margomulyo Pesawaran with the average results of pretest 26.38 then posttest 35.25 with an increase of 8.87. conclusion might elaborate on the importance of the work or suggest applications and extensions.

The Influence of Plyometric Training on Smash Results in Extracurricular Volleyball at SMAN 1 Simpang Pematang

Alfajar Jaya Wijaya.MH¹, Arifai²

fajaroppo937@gmail.com¹, arifai@teknokrat.ac.id²

Universitas Teknokrat Indonesia

Abstract

The purpose of this study is to determine the effect of plyometric training on the increase of extracurricular smash volleyball at SMA Negeri 1 Simpang Pematang. By using the experimental method, "one-group pretest-posttest design". The population in this study amounted to 15 students who participated in the Volleyball extracurricular at SMA Negeri 1 Simpang Pematang using the total sampling technique, because it used the entire population. The results showed that there was a significant difference between pretest and posttest in improving smash ability. The data shows that the average pretest score is 17.09, while the posttest increases to 20.32. Therefore, it can be concluded that plyometric training has succeeded in improving students' smash skills in the Extracurricular activities of SMA Negeri 1 Simpang Pematang, with an average change of 3.2.

Keywords: *smash, plyometric training, volleyball.*

Introduction

Sports are a learning process through physical activity aimed at bringing about positive changes in various aspects of an individual's quality, including physical, mental, and emotional. According to research (Nugroho, 2021), volleyball is played by two competing teams, with each team consisting of 6 players. (Yusmar, 2017). This game involves throwing a ball over a net to drop the ball into the opponent's playing area to score points and win the match. (Hanggara, 2018). The relevant research related to this study is the one conducted by Bayu Adhitya Bagaskara & Suharjana (2019) from Yogyakarta State University, titled "The Effect of Plyometric Box Jump & Plyometric Standing Jump on Vertical Jump Ability in Male Volleyball Club Athletes."

The study aims to investigate the impact of plyometric Box Jump training on the vertical jump ability of male Ganevo athletes aged 14-17, test the effects of plyometric standing jump training on the vertical jump of male Ganevo athletes aged 14-17, and evaluate which type of training is more effective in improving vertical jump among male Ganevo athletes aged 14-17. The results indicate that there is a significant effect of Plyometric Box Jump & Plyometric Standing Jump training on the vertical jump ability of male Ganevo Volleyball Club athletes aged 14-17, with an increase of 4.44% or 2.5 cm. From the presentation above, this serves as the background for this research to investigate the effect of plyometric training on the smashing results of volleyball players at SMA Negeri 1 Simpang Pematang.

Based on observations made by the researcher while supervising the students' training at SMA Negeri 1 Simpang Pematang, several issues related to the smashing technique performed by the students were identified. One of them is the difficulty in producing effective smashes, where some players struggle to get past the opponent's defense. This occurs when the ball is successfully intercepted or blocked by the opponent, preventing it from crossing the net and causing it to fall into their own team's area. Based on those observations, it can be concluded that many players are still unable to perform smashes effectively. In this research, the author is interested in conducting a study titled "The Influence of Plyometric Training on the Smash Results of the Extracurricular Volleyball Program at SMA Negeri 1 Simpang Pematang."

This research aims to objectively evaluate the effectiveness of various plyometric training approaches with varying intensities and durations in improving the ability to perform smashes efficiently. As explained, two hypotheses emerge in this research. That is H_a : There is an influence of Plyometric Training on the improvement of the smash in the extracurricular volleyball program at SMA Negeri 1 Simpang Pematang. H_o : There is no influence of Plyometric Training on the improvement of the smash in the extracurricular volleyball program at SMA Negeri 1 Simpang Pematang.

Findings and Discussion

Population and Sample

Population is a generalized area consisting of objects or subjects that have specific qualities and characteristics determined by the researcher for study and conclusion (Sugiyono, 2018). The population in this study consists of 15 students who participate in the Volleyball extracurricular activity at SMA Negeri 1 Simpang Pematang. According to Sugiyono (2018), a sample is a part of the quantity and characteristics possessed by that population. In this study, the researcher used the Total Sampling technique.

The procedure for determining the sample employs Total Sampling, which is a technique where the entire sample is equal to the members of the population. If the population is less than 100, it is advisable to use the entire population as the sample. The sample used consists of 15 students from the volleyball extracurricular at SMA Negeri 1 Simpang Pematang.

Data Collection Techniques

In this study, the test instrument uses a test by directing the targets that already have their scores. The instruments used are volleyball, net, cones as point markers, and research blanks:

1. Equipment
 - a. A standard-sized volleyball court complete with posts and net, with lines marking the scoring areas.
 - b. Net posts and 2 ropes, each 10 meters long.
 - c. Test forms and stationery.
2. Official
 - a. The official who tosses the ball for a smash,
 - b. A person who monitors where the ball lands and keeps score.
3. Implementation
 - a. The sample is on the field
 - b. After the whistle signal, the research sample will receive a throw from the thrower,
 - c. The sample will perform a smash movement five times towards the box that has been set up as point indicator
4. How to calculate points
 - a. A volleyball that lands in the box with number 5 earns 5 points.
 - b. A volleyball that lands in the box with number 4 earns 4 points
 - c. A volleyball that lands in the box with number 3 earns 3 points.
 - d. A volleyball that lands in the box with number 2 earns 2 points.
 - e. A volleyball that lands in the box with number 1 earns 1 point.

Picture 3.1 Research Instrument

Sumber : (Nurhasanah, 2021)

Tabel 3.2 Assessment Norms

No	Category	Value
1	Very good	22 – 25
2	Good	19 – 21
3	Enough	14 – 18
4	less	9 – 13
5	Very less	5 - 8

Analysis Method

This research will continue by conducting normality, homogeneity, and hypothesis tests using SPSS 26. In the normality test, the author will use SPSS 26 to perform the Shapiro- Wilk test. Additionally, the author will conduct a homogeneity test; if the significant value is > 0.05 , it indicates a homogeneous data distribution, while a significant value < 0.05 indicates a non-homogeneous data distribution. Finally, the author will carry out the last test, which is the hypothesis test. This testing will be conducted using the SPSS 26 program. By comparing the average (mean) of group X, it has no effect on the improvement of smashes in the extracurricular volleyball program at SMA Negeri 1 Simang Pematang. If it is proven that the t-value is smaller than the t-table value, then the null hypothesis is rejected. If it is proven that the t-value is greater than the t-table value and the significance value $p < 0.05$, then the null hypothesis is accepted and has an effect. H_0 (null hypothesis): if the Sig value > 0.05 , it means that the Plyometric training method has no effect.

Results And Discussion

This research was conducted over 16 meetings with the aim of determining the effect of Plyometric Training on the improvement of smashes in the extracurricular volleyball program at SMA Negeri 1 Simpang Pematang. Based on the results of the research above, if presented in the form of descriptive statistics, it can be seen in the following table:

Table 4.1. Descriptive Statistics Data

Statistik	<i>Pretest</i>	<i>Posttest</i>
N	15	15
Mean	17,09	20,32
Std. Deviation	1,269	1,287
Min	15	19
Max	19	23

From the data presented, the average score on the initial test was 17.09, while on the final test it was 20.32. Additionally, the standard deviation on the initial test was 1.269, whereas on the final test it was 1.287. The minimum score on the pretest is 15, indicating a sufficient level, while the final score on the posttest is 19, indicating a good level. For the maximum score, the pretest is 19, indicating a good level, whereas the posttest is 23, indicating a very good level.

Based on the data in the table above, the pretest and posttest data for the Test Smash Volleyball of students from SMA Negeri 1 Simpang Pematang in the Treatment group can be seen in the bar chart as follows:

Figure 4.1. Pretest and Posttest Bar Char

Uji Prasyarat

Uji Normalitas

The purpose of the normality test is to determine whether the data obtained from the analyzed variable is normal or not. The rule used to determine normally distributed data is > 0.05 , and for data that is not normally distributed, it is < 0.05 . Below, it can be seen using the following table.

Variable	P	Sig	information
Pretest	0.089	0.05	Normal
Posttest	0.121	0.05	Normal

Tabel 4.3. Result test Normality

From the results of the table above, it can be seen that all data have a significance value > 0.05 . Then we can say that the variable data is normally distributed.

Uji Homogenitas

The purpose of the homogeneity test is to examine the similarity of samples, determining whether the samples are uniform or not, taken from the population. If $p > 0.05$, then the data or test is considered homogeneous; if $p < 0.05$, then the data or test can be said to be heterogeneous. The results of the homogeneity test for this research can be presented as follows:

Variable	Sig.	Information
Pretest	$0,793 > 0.05$	Homogen
Posttest	$0,845 > 0.05$	Homogen

Tabel 4.4. Result test Homogeneity

From the table above, it can be seen that the posttest significance value is $0.793 > 0.05$, indicating that the data is homogeneous, and the posttest significance value is $0.845 > 0.05$, which also indicates that the data is homogeneous or the same. Since all the data is homogeneous, the data analysis can proceed.

Uji Hipotesis

The t-test in this research can answer the hypothesis once it has been proposed. Hypothesis testing is conducted to determine the acceptance or rejection of the proposed hypothesis. Hypothesis testing using the t-test (Paired Sample T-Test) at a significance level of 5%. Based on the results of the prerequisite tests, the data in this study is normally distributed and homogeneous, so the analysis used to test the hypothesis is the

t-test using

the Paired Sample T-Test. The data is considered significant if the p-value < 0.05 . The results of the hypothesis can be observed in the table below:

Mean	Df	T Table	T count	P
3,2	15	2.080	11.920	0.000

Tabel 4.6. Result test Hypothesis

Based on the calculations from the data above, the calculated t value (11.920) is greater than the table t value (2.080) and P (0.000) is less than (0.05). These results indicate that the calculated average is 3.227. The calculated t value is greater than the table t value, and the significance is less than 0.05.

Conclusion

Based on the results of the research and discussion, it can be concluded that the implementation of Plyometric Training can lead to an improvement in players' Smash abilities. Therefore, in this chapter, the conclusion is presented: there is an influence of Plyometric Training on the improvement of Smash. There is a significant difference between the pretest and posttest in the enhancement of Smash ability. The data shows that the average pretest score is 17.09, while in the posttest it increased to 20.32. Therefore, it can be concluded that plyometric training successfully improved the smashing ability of students in the extracurricular program at SMA Negeri 1 Simpang Pematang, with an average change of 3.2

The Effect of Circuit Training on Dribble Agility in Extracurricular Basketball at SMK Muhammadiyah 1 Pringsewu

Reza Adhi Nughroho¹, Diva Elviara Ananda²

reza.adhi.nughroho@teknokrat.ac.id¹, divaelviarananda25@gmail.com²

Universitas Teknokrat Indonesia

Abstract

The ability to move quickly and precisely is known as agility. Observations in the field show that basketball extracurricular students of SMK Muhammadiyah 1 Pringsewu have poor dribbling skills. This is important to improve school performance in sports competitions, especially in basketball. Therefore, research was conducted to find out how circuit training impacts basketball dribble agility. This study used a design. Experiment Randomized Pre And Post Test Group Design, with a total sample of 20 people divided into two groups: the treatment group (Circuit Training) as many as 10 people, and the control group (Zig-Zag Run Training) as many as 10 people. The result and discussion of the study showed that Circuit Training is effective in increasing body agility, with an average increase of 4.58 seconds or an increase of 27.19%. The conclusion of this study is that Circuit Training can significantly improve basketball dribble agility.

Keyword: *agility, circuit training, exercise*

Introduction

Sport is one of the methods to maintain physical fitness related to physical and mental abilities. Sports are inseparable from the basic needs in carrying out daily movement activities. In this modern era, improving the quality of sports achievements, especially in basketball, is very important. Basketball is a game in which two teams play, each with five players on the court and five other players as reserves. The object of the game is to get the ball into the opponent's hoop on a hard-floored area no more than 94 feet long (about 29 meters) and no more than 50 feet wide (about 16 meters) (Mahyuddin & Sudirman, 2021). Basketball as a game that involves complex movements such as running and jumping, requires a variety of skills, including strength, agility, speed, accuracy, flexibility, balance, and other skills (Wulandari & Umar, 2020).

Agility is the ability to change direction quickly and precisely. In a basketball game, speed in dribbling the ball is very important because it can pass opponents and maintain control of the ball when making a fast break. When someone is able to move from one position to another quickly and with good coordination, it shows that their agility is quite good (HASYIM, 2020) According to (Restu, 2018). Dribbling in basketball is the act of bouncing the ball continuously while a player is moving. Dribbling is required when a player moves with the ball. The rules in basketball games require players not to take more than three steps with the ball when dribbling before throwing or throwing the ball to teammates. Furthermore, (Fatahillah, 2018).

Dribbling is the ability of students to move the ball with their hands as quickly as possible to achieve certain goals, such as counterattacking, passing opponents, provoking opponents, controlling the tempo of the game, and scoring points to the opponent's ring without losing balance. Agility training can help improve the athlete's ability to change direction quickly and efficiently, and that is very important in dynamic game situations such as when dribbling in the middle of the field (Ilmu et al., n.d.). By improving agility, a player can become more responsive to opponents' movements and better able to maintain control of the ball. Agility training often involves types of exercises such as zig-zag runs and shuttle runs (Udam, 2017).

Exercises such as the zig-zag run and shuttle run involve coordinated circular movements, where players must move quickly and responsively to take different paths quickly, this can help improve players' ability to change direction quickly and effectively when they are dribbling the ball in the middle of the field (Utomo & Syafi'i, 2022). Zig-zag run training also helps the development of body coordination, making it easier to test overall physical condition. From observations in the field, it appears that basketball extracurricular participants at SMK Muhammadiyah 1 Pringsewu have agility that needs to be improved. One method that is considered effective is to carry out scheduled and programmed training to improve agility.

There are various kinds of exercises used to improve body agility, for example: Ickey Shuffle training conducted by Padmawan (Padmawan et al., 2020), hexagon drill training conducted by Saputra & Ahmad (Saputra & Ahmad, 2021), and ladder drills and Cone Drills training conducted by Rahmawati (Rahmawati et al., 2019). The variations in all of these studies are too limited, so different variations are needed but still focus on

increasing body agility. Therefore, research with the title “The Effect of Circuit Training on Dribbling Agility in Basketball Extracurricular at SMK Muhammadiyah 1 Pringsewu” was raised. The formulation of this research problem is: can circuit training improve basketball dribbling ability? Based on the formulation of the problem, the purpose of this study is to determine the effect of circuit training on basketball dribbling agility.

Theory and Method

This research is experimental research with the research design Randomize Pre And Post Group Design Experiment (Sugiyono, 2013).

Gambar 1
Design Penelitian (Sugiyono, 2013)

Keterangan :

- O2 : Pengukuran Akhir Kelompok Kontrol (Latihan Zig-Zag Run)
- O3 : Pengukuran Awal Kelompok Perlakuan (Latihan Circuit Training)
- O4 : Pengukuran Akhir Kelompok Perlakuan (Latihan Circuit Training)

This research was conducted at SMK Muhammadiyah 1 Pringsewu and involved all students who participated in extracurricular basketball at SMK Muhammadiyah 1 Pringsewu, consisting of 20 students. The sample for this study was obtained using the Pocock formula, and the data for the formula was obtained from preliminary observations about the level of agility of students in the school's basketball extra curricular.

According to the provisions in the Pocock Formula, the resulting number will be rounded down if it has a decimal fraction of 0.5 or less. For example, the number 10.11 will be rounded down to 10.

$$n = \frac{2(\sigma^2)}{(\mu_2 - \mu_1)^2} f(\alpha, \beta)$$

Gambar 2
Rumus Pocock (Pocock, 2008)

Keterangan :

- n : Jumlah Sampel
- σ : Standar Deviasi
- μ_2 : Rerata Kelincahan Tubuh Siswa setelah pelatihan
- μ_1 : Rerata Kelincahan Tubuh Siswa penelitian pendahuluan/observasi awal
- $f(\alpha, \beta)$: 10,5 (Tabel of Value)

As this experimental study lasted for six weeks, researchers had to provide additional samples to account for failures, including those who were sick, those who were injured during the exercise, and those who had accidents. To guarantee the 4 integrity of the main sample, a backup sample must be provided. In this study, Po cock's formula was used to calculate 20% of the sample size. This amounts to $(20\% \times 10 = 2)$, rounded to 1), bringing the total sample per group to $(10 + 2 = 12)$ people). It is important to remember that the reserve sample was only used to keep the main sample size intact; they were not included in the data analysis. In this study, descriptive analysis was used to calculate the mean, standard deviation, minimum, and maximum values of student body speed. Data normality test with Shapiro-Wilk was used to evaluate the normality of body agility data in each treatment and control group. Furthermore, the homogeneity test with Levene was used to evaluate the homogeneity of body agility data in both groups. Finally, the t-paired test was used to analyze the average change in body agility between the two groups before and after training.

Findings and Discussion

The first step was to conduct a descriptive analysis to determine the mean of the initial and final measurements for the treatment and control groups

Table 1. Descriptive Analysis

	N	Minimum (sec)	Maksimum (sec)	mean (sec)	Std. Devitation
Initial test treatment group	20	16,14	17,85	16,80	0,56
Final test treatment group	20	11,34	12,25	12,20	0,49
Initial test control group	20	16,25	17,89	17,14	0,52
Final test control group	20	12,27	16,53	14,28	1,12
Valid N (Listwise)	20				

Nomination

According to table 1, the mean initial test for the treatment group was 16.88 ± 0.63 seconds with a minimum value of 16.16 seconds and a maximum of 17.93 seconds for

the control group, the mean initial test was 17.15 ± 0.60 seconds with a minimum value of 16.32 seconds and a maximum of 13.23 seconds. The initial test of the control group averaged 17.15 ± 0.60 seconds with a minimum value of 16.32 seconds and a maximum of 17.96 seconds. The final test of the control group averaged 14.46 ± 1.15 seconds with a minimum value of 13.25 seconds and a maximum of 16.59 seconds.

Table 2: Normality and Homogeneity Test

Body Agility Measurement	Uji Normalitas (Shapiro Wilk- Test)		Uji Homogenitas (Levene-Test) Value p
	Treatment Group Value P	Control Group Value p	
Initial Measurement Start (seconds)	0,180	0,172	0,929
Final Measurement (seconds)	0,608	0,118	0,024

Description:

Circuit Training Treatment Group : Circuit Training

Control Group : Zig-Zag Run Training

Both the initial test and the final test in the normality test of the treatment group showed normal distribution, with p values of 0.218 and 0.706 according to data from table 2. This shows that both tests showed normal distribution with p values above 0.05.

In the control group, the p value for the initial test normality test was 0.190, and the p value for the final test was 0.190. Because the value ($p > 0.05$), it can be concluded that the normality test results of the initial test and final test in the control group are normally distributed. Table 3, shows the average difference before and after training of 4.58 seconds with a p value = 0.00 which indicates that the treatment group has a significant difference because the value ($p > 0.05$). Therefore, circuit training or treatment group training, significantly increases the agility of the student body. In addition, Table 3 shows that the control group has a difference in the meantime before and after training of 2.97 seconds with a p value = 0.00. The p value < 0.05 , which indicates that the control group has a significant difference. Consequently, the Zig- Zag Run training conducted in the control group significantly improved the agility of the student body.

Diagram 1. Pretest & posttest in treatment & control groups

Table 4. Test Data for Differences in Intergroup Training Effects with Independent t-test in Determining the Final Results of Student Body Agility Measurement

	Group	Mean	T	P	Mean Difference
Post-Test	Treatment	4,50	5,222	0,00	1,51
	Control	2,88			

However, the difference observed between each group shows that circuit training is more effective. Figure 3 shows that the circuit training in the treatment group showed higher student agility than the control group (zig- zag run), with a ratio of 4.58 seconds to 2.97 seconds. Table 4 shows that the difference in training effect between the groups has a value of $p = 0.00$, or $p < 0.05$. This indicates a significant difference in post-test results between the treatment and control groups. Table 5 shows that the treatment group (circuit training) had an increase of 27.20% and the control group (zig-zag run) had an increase of 15.60%.

Table 5 Percentage Change in Body Agility after Training

Analysis Result	Group Treatment	Group Control
Mean Initial Test (seconds)	16,80	17,15
Final Test Mean (seconds)	12,15	14,28
Mean Difference (sec)	4,30	2,88
Percentage (%)	27,11	15,55

Conclusion

Based on the findings and discussion above, it can be concluded that circuit training exercises have a positive effect on the agility of extracurricular basketball dribbles of SMK Muhammadiyah 1 Pringsewu. The researcher proposes that sports teachers and coaches can consider using this method to improve agility

Masculinity in Words: A Cross-Cultural in Male Language and Translation"

(a case study in Zinah Novel by Nawal el-Sa'dawi)

Tika Fitriyah¹, Mangatur Nababan², Riyadi Santosa³,
Muhammad Yunus Anis⁴

tikafitriyah15@gmail.com¹

1.2.3.4 Faculty of Cultural Sciences, Universitas Sebelas Maret, Surakarta,
Indonesia

Abstract

Language reflects the constructs of social and cultural dynamics, constantly evolving with shifts in societal views on gender. This study aims to analyze the language features used by men in the novel *Zinah* and its translation. The social and cultural differences between Arab and Indonesian contexts present a compelling factor in translation studies, examining the translator's approach to addressing these disparities. This research used a sociolinguistic and translation approach, drawing on the concept of male language popularized by Coates and the translation techniques developed by Molina and Albir. The results of this study indicate that there are 6 linguistic features used by male characters in the novel "*Zinah*," namely: more assertive, short answers, interruptions, commands and directives, swearing and taboo language, and questions. Additionally, this study also focuses on exploring translation techniques that have a significant impact on the quality of male language translation. In this regard, the researcher found that the techniques frequently used that can reduce the quality of male language translation are reduction, discursive creation, and generalization.

Keywords: male language; gender and language; translation

Introduction

The differences in linguistic behavior between men and women are influenced by social constructs. Their distinct roles in society account for the variations in the language they use. Wardhaugh (2006, p. 330) notes that men are perceived as more powerful than women, which tends to make them more confident in speaking. However, this assumption may not hold universally, as gender, being a social construct, is shaped through various discourses, practices, and relationships (Albirini 2016:188).

Given these dynamics, the language spoken by men and women across different media becomes crucial to investigate. One of the most candid media reflecting societal developments is literature (Latifi 2016). Novels, as a part of literature, serve as tools to mirror the social, political, economic, and other aspects of life at the time they are written, often depicting realities not shown in other media. In this context, media hegemony can imprison the public's right to opinion (Jones, Jaworska, dan Aslan 2021).

In the socio-cultural reality of the Arab world, patriarchal culture, male hegemony in all aspects of life, oppression of women, and gender disparities are prevalent phenomena. Novels often become tools of resistance against the oppression and enslavement prevalent in Arab nations, especially Egypt. One prominent writer voicing these issues is Nawal el-Sa'dawi. This study analyzes how male language is manifested in the novel *Zinah*.

Zinah, the last novel written by Nawal, was selected as the research site because it portrays a complex and contemporary reality concerning gender issues and Islam, thus deemed highly critical in echoing future feminist theology (Latifi 2016). *Zinah*, as one of Nawal el-Sa'dawi's finest works, is based on her concerns about gender phenomena within the socio-cultural life in Arab societies, particularly in Egypt. The aspects most highlighted in the novel are patriarchy and religious-based gender oppression. The novel depicts how the patriarchal system dominates women's lives. The violence faced by women, both physically and emotionally, is one of the effects of patriarchy in the realities of Arab society.

As a resistance to this reality, Nawal created the characters Zeina and Bodour as icons of women who fight against norms that constrain their freedom and identity. The social and cultural portrayal in the novel also reflects changes occurring in Egyptian society, including the women's movement and demands for equal rights, as represented by the characters Zeina and Bodour. Thus, the subsequent question arises: does Nawal also enact resistance in the language features used by women and men in the novel, thereby ensuring equality in the linguistic traits they employ in their discourse? Or does the author utilize language features commonly used in society's communications, assuming that literature mirrors reality? Based on this, the male constructs depicted through language use in the novel *Zinah* become the focus of this research.

This study also examines the translation aspect of the male language present in *Zinah*. Translation analysis in this context is crucial to confirm the accuracy of translating male language from Arabic to Indonesian—two languages with distinct cultural differences—and how techniques are used by the translator. Translation is not merely a

mediator between languages but also between their respective cultures. Therefore, translators must consider the relevant cultural aspects of each (Lörscher 2020, p. 3), to ensure that the translation is well-received among the target language readers. Based on this, it can be said that language and culture are interdependent in translation. Successful translation requires not only linguistic skills but also a deep understanding of cultural contexts to ensure that the message is conveyed accurately and appropriately.

Furthermore, language reflects the values, beliefs, and social norms of a culture. When translating, it is important to consider how these elements influence communication and their impact on the target audience. In this regard, a common challenge faced by translators is balancing fidelity to the source text with the need to adapt to the cultural expectations of the target audience.

Research on language and gender has been extensive, yet most studies have focused on women's language, with data from English-language comics and films. For example, the study titled "Women's Language Used By Female Characters In Wonder Woman Movie" (Septiari, Sedeng, and Beratha 2022) analyzes the language of female characters in the Wonder Woman film. Similarly, Utari (2019) conducted a study titled "An Analysis of Women's Language Features Used by Indonesian Female Author in the Book of Dear Tomorrow by Maudy Ayunda." These studies are of great interest to researchers as they provide evidence of gender discrimination against women in linguistic aspects.

As for male language, it has been studied less frequently. Among the research that explores male language are studies such as "Characteristics of Linguistic Features of Male and Female Characters in Detective Conan Comics, Edition 28" (Nugraha and Prasetyo 2022); "Language and Gender: A Study of Male and Female Linguistic Characteristics in Children's Films" (Hidayati 2016); and others. These studies detail how the linguistic characteristics used by male and female characters are shaped, employing the theory of women's language proposed by Lakoff (1973).

Differing from previous research, this study aims to examine how men are constructed through language in the Arab novel, *Zinah*. This study uses the theory developed by Coates (Coates 2004), which builds on the women's language theory initiated by Lakoff (1973). Additionally, this study examines the translation techniques developed by Molina and Albir. This is done to identify problems in translations and to prevent similar errors by other translators, as mistakes in selecting translation techniques can diminish the quality of the translation.

Theory and Method

This research is a descriptive qualitative study in the fields of linguistics and translation. It is termed qualitative because it utilizes linguistic phenomena as discursive data, namely language units that realize masculinity in the novel *Zinah* and its translation titled *Zeina*, whether in words, phrases, or sentences. This study considers linguistic phenomena to be plural (not singular), holistic, and inseparable from context. Therefore, researchers must understand the 'world view' because all phenomena are unique and context-dependent (Santosa, 2021, pp. 34–35)

This research is defined as descriptive because it aims to understand, illustrate, and describe the linguistic phenomena, specifically the male language features in *Zinah* and its translation *Zeina*. Furthermore, this study will reveal the techniques used by translators in translating these expressions.

The design of this study is fixed research, as the researcher determines the focus and objectives of the research from the beginning. The focus of this research is the female and male language features in the novel *Zinah* and its translation *Zeina*. This translation research is referred to as product research because it focuses on the source text and its translation into Indonesian, not on the translation process.

The approach used in this study is sociolinguistic. Sociolinguistics, a discipline that encompasses the relationship between language and gender, is also used in this study to examine the language used by the author in describing male and female language (Crawford, 2001). Sociolinguistics investigates the relationship between language and social factors. One social factor that often influences language use is gender, making language and gender a significant area of sociolinguistic study. Researchers also utilize a translation approach to study translations. Specifically, the analysis of translation techniques in this study is based on the theory developed by Molina and Albir (2002).

Men are considered to be more powerful than women, and this is reflected in the language they use in communication. The features of male language are discussed alongside female language features by (Lakoff 1973) and further developed by (Coates 2004). Here are the explanations:

1. More Assertive
Men tend to use language that is firm, clear, and confident in expressing opinions, beliefs, or facts. (Coates 2004).
2. Short Answer
Men typically answer questions directly, without beating around the bush, and do not ask back or expand on the topics they discuss.
3. Interruption
Interrupting conversations by finishing other people's sentences before they have finished speaking is a common communication method among men.
4. Command and Directive
Issuing commands firmly and with a strong authoritative tone is a characteristic feature of male speech. A directive is a language style used when one wants others to do something as instructed.
5. Swearing and taboo language
Using swear words and taboo or vulgar language is commonly used by men in their communication.
6. Question
Another unique aspect of how men and women use language is when they ask questions. Men ask questions to seek information, while women ask questions for various reasons, including inviting others to participate, introducing new topics, understanding others' views on a specific topic, or provocation.

Findings and Discussion

Based on the research conducted, the researcher found that the male characters in the novel "Zinah" use six linguistic features, with commands and directives being the most predominant. The male characters also frequently use questions, but there is a distinction in their purposes. Out of 41 utterances collected, 21 questions were used by males to ask or obtain information, while the remaining 20 questions served purposes more commonly associated with females, such as confirming the interlocutor's opinion on a specific topic or simply engaging in small talk. The linguistic feature used the least is interruption. Below is the linguistic data obtained.

No	Male Language feature	n
1	<i>More Assertive</i>	17
2	<i>Short Answer</i>	4
3	<i>Interruption</i>	1
4	<i>Command and Directive</i>	41
5	<i>Swearing and taboo language</i>	20
6	<i>Question</i>	41

1. More Assertive

The researchers identified 17 sentences exhibiting more assertiveness spoken by male characters in the novel Zinah. Among these is the following example:

Example 1

Source Language (SL): لا والله يا أستاذ، كنت زمان وأنا شاب أقرأ الصحف، وأصدق كل كلمة منشورة، لكن بعد أن كبرت وشبت عرفت أن كلهم كذابين

Target Language (TL):

"Tidak, demi Tuhan. Dulu waktu saya muda, saya membaca koran dan mempercayai semua kata-katanya, tetapi setelah saya besar dan dewasa, saya tahu semua itu bohong."

"No, by God. When I was young, I used to read the newspapers and believe every word they said, but after I grew up and matured, I knew it was all lies."

Context: This example demonstrates the speaker's confidence in his statements, as well as his boldness in expressing his opinion that Thaha Husain was not as good as he had thought, even claiming that many lies were told by Thaha Husain.

The sentence was translated using various techniques; however, one technique that diminished the quality of the translation was reduction. The translator omitted a politeness marker present in the source language, specifically 'يا أستاذ'.

This term in the source language carries a deeper meaning than 'يا أخي' is, a phrase often reduced in the translations of the novel *Zinah*. It holds significant depth in the source language as it is used to close the relational distance between the speaker and the interlocutor, minimizing the gap between them. The decision to omit this part certainly compromises the accuracy of the translation, although it does not affect the acceptability and readability aspects.

Example 2

Source Language (SL): أحل الله للرجال الإماء والجواري وما ملكت اليمين، فما باله وهو الأمير ؟

Target Language (TL):

"Tuhan memperbolehkan laki-laki imam, perempuan, budak, apalagi ia adalah seorang Amir."

"God has permitted men to have maidservants, concubines, and what their right hands possess; what more for him, as he is a prince?"

Context:

The first controversial word in this translation is the translation of 'أحل' to 'permitted'. In Arabic, to make lawful ('halal') and to permit ('mubah') carry different nuances of meaning, though in the target language, they may seem synonymous. To make lawful in the context of Arab culture is the antonym of to make unlawful ('haram'), whereas permit ('mubah') stands on its own with a neutral connotation. If translated as 'to make lawful,' it carries a stronger connotation than merely 'to permit'. In this context, the speaker aims to emphasize that enslaving women is not forbidden; God has even made it lawful. In the pre-Islamic Arab cultural context, slavery was commonplace, and women could be enslaved. This is an old culture that gradually eroded with the birth and spread of Islam in the Arabian Peninsula.

Moreover, the translation contains a critical error, thus failing to transfer the meaning to the readers in the target language. This significant error is the translation of "الإماء" as "imams". This translation deteriorates the quality because it does not align with the lexical or contextual meaning. According to the Al-Maany dictionary, "الإماء" is the masdar form of 'أَمَى', which means 'enslaved woman' or 'one who is not free.' It signifies a woman who is enslaved, thus having no freedom in her life, as she is merely a possession of her owner who has the liberty to do whatever he wishes with her.

Translating the word into "imam" represents a significant mistake, substantially diminishing the quality of the translation in terms of accuracy, acceptability, and readability. The technique used to translate this term is referred to as discursive creation. The same technique is also used to translate 'فما باله وهو الأمير', which more appropriately translated would be: '...what harm is there, especially since he is a leader.'

This sentence reinforces the argument constructed by the translator earlier, which states the lawfulness of making women slaves, leading to the conclusion that it is not a mistake, particularly if the perpetrator is a leader. The recommended translation would

seemingly enhance the assertiveness present in the example.

Furthermore, the phenomenon of translating 'الله' as 'God' in Example 2 uses a technique known as generalization because the term 'God' is more universally used by adherents of various religions, whereas 'Allah' in this context specifically refers to the God worshiped in Islam.

Moreover, the God referred to in Indonesian culture likely carries different connotations than 'Allah' in Arab culture. The Arab culture intended by the author emphasizes the proximity of Arab people to Islamic symbols. This is crucial to be portrayed in the target language, as one of the author's critiques concerns followers or leaders of the Islamic faith, who often invoke Islam to justify various gender injustices, as evidenced from Example 2, where the name of Allah is invoked to support arguments related to enslaving women.

The word 'Allah' is frequently generalized by the translator to 'God', as seen in Example 2. This decision was deliberately made by the translator to broaden the target readership of the translated book. However, in the source language, the word 'Allah' carries a deeper and more specific meaning than 'God'. Similarly, in the target language, the word 'Allah' for some Muslim groups appears or is perceived as more religious than the word 'God'. Therefore, replacing it with 'God' diminishes the religious significance embedded in the term.

Example 3:

Source Language (SL): لكن الأمر بيد الأمير.

Bahasa Sasaran (BSa): *Laki-laki di ujung perintah*

"The man at the end of the command."

The translation in the example above is incomprehensible in the target language. The phrase at the end of the command does not convey the meaning 'the decision lies in the hands of the leader'. This error stems from a misunderstanding of the phrase 'بيد الأمير'. This phrase is a form of metaphor, with the word 'يد' (hand) used symbolically, as it is customary to use hand gestures when issuing commands. Moreover, in Arabic, the word can also commonly mean 'authority', as illustrated in the hadith:

مَنْ رَأَى مِنْكُمْ مُنْكَرًا فَلْيُغَيِّرْهُ بِيَدِهِ فَإِنْ لَمْ يَسْتَطِعْ فَبِلِسَانِهِ وَمَنْ لَمْ يَسْتَطِعْ فَبِقَلْبِهِ وَذَلِكَ أَضْعَفُ الْإِيمَانِ

"Whoever among you sees an evil action, let him change it with his hand; if he cannot, then with his tongue; and if he cannot do that, then with his heart – and that is the weakest of faith." (Hadith reported by Muslim). herefore, an ideal translation for the above example would be: "But the command is in the leader's hands" In Indonesian, the phrase 'tangan pimpinan' ('hand of the leader') is commonly used to signify the leader's authority.

Upon examining the language spoken by male characters in this novel, the researchers conclude that the male characters are not merely assertive in their speech; 'more assertive' in this context leans towards aggressiveness. Assertive individuals boldly express their ideas and opinions, yet they also respect the opinions, needs, and desires of

others. They do not prioritize others' desires over their own. Aggressive individuals, however, do not accept others' opinions; they threaten and attack others, thus being perceived as seeking conflict with others. Aggressive people tend to disregard the feelings and rights of others. Assertive individuals possess self-control to achieve what they desire without infringing upon the rights of others. (Assertiveness, how to stand up ...)

Here Is an example of the aggressiveness displayed by a male character in the novel Zinah:

أنت مؤمنة يا صافي بالله والرسول، قانون السماء يعطيني الحق في الزواج بأخرى، وقانون الدولة أيضا إن شئت اذهبي إلى المحكمة

"Kau adalah orang yang beriman kepada Allah dan Rasul, Shofi. Aturan langit membenarkanku untuk menikah dengan perempuan lainnya, begitu juga dengan aturan negara. Jika kau mau bercerai, pergilah ke pengadilan."

"You are a believer in Allah and the Messenger, Shofi. The heavenly law justifies me marrying another woman, as does the state law. If you want a divorce, go to court."

This statement is made by a male character to a female character, within a husband-wife relationship. On one level, the statement serves as the author's critique of how religious doctrines are often used to discriminate against women. In this context, the speaker uses the provision for polygamy allowed in Islam to corner the woman.

On another level, the chosen style is used to demonstrate that the speaker is knowledgeable and more powerful than his interlocutor. The linguistic feature used in the statement is more assertive because it uses language that is firm, clear, and confident in expressing opinions, beliefs, or facts (Coates 2004). Moreover, the speaker explicitly mentions 'heavenly law,' which refers to divine law or, in Islam, Sharia law. This indicates the speaker's high level of confidence based on his understanding of the religious teachings he believes to be true.

From a translation perspective, the translator uses several techniques in translating this sentence. Among them are compensation, where the translator moves the word 'Sofi' from the middle to the end of the sentence in the target language; amplification, where the translator adds the words 'woman' and 'divorce,' which do not exist in the source text; and variation, using 'you' (informal) instead of a more formal equivalent. These choices affect the tone and possibly the perceived assertiveness and authority of the speaker in the target language.

The choice of words by the translator in this instance further strengthens the male character's status as someone who holds power, while the female character is portrayed as being under this power. The relationship between men and women in the translated text appears unequal, or distant, with the use of 'kau' in Indonesian culture and language, which is known as a non-sexist language. However, as it has evolved, the Big Indonesian Dictionary (KBBI) also includes asymmetrical or unbalanced terms between men and women, especially loanwords from foreign languages (Herniti, 2013).

Furthermore, the translator's choice to use a literal technique to translate 'قانون السماء' into 'aturan langit' ('rule of the sky'), while 'Hukum Tuhan' ('God's Law') would be more appropriate and accepted in the target language, demonstrates a misunderstanding of cultural and linguistic nuances. The translator's use of generalization in translating 'حق' as 'membenarkanku' ('justifies me') instead of 'memberikanku legitimasi' ('grants me legitimacy') detracts from the specificity and depth of the original text. In Arabic is often contrasted with 'batil' indicating that 'right' in Arabic conveys more than mere justification; it implies an absolute and uncontested truth. This selection of translation techniques suggests that the 'more assertive' feature in the source language has been degraded, leading to a decrease in the quality of the translation.

An example of aggressiveness is also found in the following statement:

Source Language (SL): "ناس جهلاء جبناء."

Target Language (TL): *Orang-orang yang sangat bodoh.*

"People who are very stupid."

The context of this utterance is a public place where a man is insulting Thaha Husain and his supporters, made by one of the opposing individuals.

This statement is not only assertive because it expresses an opinion about others, but it also includes aggressiveness because the speaker boldly insults others. In terms of translation, the translator omitted the word 'جبناء' which is present in the source text. This word should not have been omitted as it is a crucial element of the utterance.

The word 'جبناء' means 'cowards,' a term typically used to describe someone who is not only afraid but also avoids challenging or dangerous situations. This word carries a negative connotation and often reflects a lack of courage or responsibility.

2. Short Answer

The researchers found four instances of short responses spoken by speakers. For example:

Source Language (SL): "حاضر يا بابا."

Target Language (TL): *"Paham, ayah."*

"Understood, Dad."

Context: This is spoken by Mageeda as a response to her father's command when she enters his room.

Lexically, the word "ḥāḍir" means 'present' or 'ready', but contextually, it can be used to imply 'understood', as in the example above.

In this instance, the translator uses a conventional equivalence technique, making the translation easily acceptable within the target language community. This approach is one of the techniques that can be utilized to ensure good quality in translations.

3. Interruption

Interrupting conversations by finishing other people's sentences before they have completed speaking is a common communication style among men. In this study, the researcher found only one example of interruption, as follows:

Example 1:

Source Language (SL): "إلا يمكن"

Target Language (TL): *"Tidak mungkin"*

“Impossible!”

Context: This is a denial from a barber in response to the statement, “The Sheikh of Al-Azhar is an infidel in this country.”

The interruption in the example above is an expression of disagreement with the interlocutor who claimed that the Sheikh of Al-Azhar is an infidel. This disagreement prompted the speaker to interrupt, even though the conversation was not yet finished.

The translation of this example is of high quality in terms of accuracy, acceptability, and readability. This is because the translator used a conventional equivalence technique to translate it.

4. Swearing and Taboo Language

Using swear words and taboo or vulgar language is commonly practiced by men in their communication. The community has the power to define what constitutes swearing or not. Sometimes, a word considered a swear word may not be offensive if spoken in a normal context such as among friends, or not in an emotional state. This is because every word carries a neutral value, which can shift to either positive or negative depending on the context and purpose of the utterance itself.

Example 1

Source Language (SL): اَكْتُبِي اسْمَ أَبِيكَ وَجَدَّكَ يَا جَمَارَةَ

Target Language (TL): *tulislah nama ayahmu dan kakekmu hai anak keledai.*

Write down the name of your father and your grandfather, your donkey.

This utterance was spoken by a male teacher to his student, Zeina, who was asked to write the names of her father and grandfather but did not write them because she does not have parents like other children. The term shows an insult using animal language, where the male teacher addresses the female student derogatorily.

The word ‘جَمَارَةُ’ lexically means ‘female donkey’, and in Arab culture, it is commonly used as an insult towards someone perceived as foolish or stupid, as female donkeys are stereotypically seen as unintelligent animals. In terms of accuracy, the translation of the word is correct. However, in terms of acceptability and readability, it is less acceptable and readable in Indonesian culture, where this animal is not used to insult or demean someone. A more culturally acceptable translation might be ‘stupid buffalo’, as ‘buffalo’ in Indonesian might carry a similar derogatory connotation.

Source Language (SL): “ده زمارة”

Target Language (TL): “*Ini peluit*”

“This is a whistle”

Context: A male student's remark about measuring the genitalia of Ayah Ahmad.

The word “ده زمارة” in the context above is a type of taboo word spoken by a boy. It is used derogatorily. “!ده زمارة” is used in Egyptian slang to express surprise or to mock something that sounds like a whistle or an unexpected and strange sound.

5. Command and Directive

Researchers identified 41 instances of command and directive in the speech of male characters in the novel *Zinah*. This feature was the most prevalent among others, indicating that men feel they have power in society, thereby feeling entitled to command and speak directly according to what they desire.

Source Language (SL): “إخرس يا ولد”

Target Language (TL): “diam bocah”

“Silence, boy!”

Context: An investigator barks at Muhammad during an investigation.

The sentence is a command spoken by an investigator. In the example above, the speaker uses the term ‘يا ولد’ which means ‘boy’, though in this context it is directed at an adult, not a child. The use of this term is intended to belittle Muhammad, implying that he is child-like. In the translation of this sentence, besides using common equivalence and modulation which enhance its quality, the translator also omits ‘hey’, although including it as ‘Silence, hey boy!’ would improve the translation's quality. This addition would strengthen the condescension expressed by the speaker towards his interlocutor, making the speaker appear more demeaning, as conveyed in the source language.

6. Question

As previously discussed, the function of questions differs between men and women. Men typically ask questions to obtain direct answers, not merely for small talk. At the same time, women often use questions to maintain the flow of communication, seeking to understand the interlocutor's views on the topic being discussed.

Source Language (SL): “تتفكر طه حسين كان مؤمن أو ملحد”

Target Language (TL): “*Anda berpikir Thaha Husein itu mukmin atau kafir*”

“Do you think Taha Hussein is a believer or an infidel?”

In the context above, the question is intended to ascertain the interlocutor's thoughts about Taha Hussein. The translation is less acceptable due to a translation error, where ‘atheist’ should have been used instead of ‘infidel’.

The word ‘ملحد’ in ... dictionary refers to an atheist or someone who does not believe in the existence of God. The terms ‘atheist’ and ‘infidel’ in both Arab and Indonesian cultures carry significantly different connotations.

An atheist is someone who denies the existence of God or does not follow any religion. In contrast, ‘infidel’ refers to someone who rebels against the commands of Allah. In some extreme Muslim groups in Indonesia, there is a belief that the blood of infidels is permissible, indicating that the term ‘infidel’ is considered more sensitive than ‘atheist’. A mistranslation in this context can be particularly problematic, as it shifts the meaning of the term significantly, potentially evoking stronger and more controversial implications than intended.

Conclusion

Gender roles in certain societies can be observed through the use of language in literary works. This research found that male characters in the Arab world, as depicted in the novel "Zinah," uphold patriarchal norms. The strong patriarchy in Arab countries shapes male characters to be not only assertive but also aggressive, evident in their use of overly confident language that can harm interlocutors through excessively harsh insults. Additionally, the use of command and directive features reflects that men hold the highest authority in society. When these features are translated, various issues arise due to errors in the choice of translation techniques. Among the techniques that diminish the quality of translation are reduction, discursive creation, and generalization.

Illocutionary and Perlocutionary Acts in Public Figure's Speech: Austin vis-à-vis Searle's Theory

Sekar Kinasih¹, Akhyar Rido²

Indonesia

Abstract

This study examines the application of J.L. Austin's theory vis-à-vis John Searle's Speech Act Theories in media discourse, focusing on illocutionary and perlocutionary acts. Austin introduces the idea that utterances convey meaning and perform actions, categorizing speech into locutionary, illocutionary, and perlocutionary acts. Searle expands this theory with a more structured classification of illocutionary acts, emphasizing communicative intention. Despite their contributions, limited research addresses how these acts interact in public figures' speeches within media contexts. This study aims to bridge that gap by analyzing talk show hosts' speech acts using Austin's and Searle's frameworks. The findings highlight that Austin's theory focuses on the audience's emotional and behavioral responses to speech acts. In contrast, Searle's theory emphasizes the successful execution of the speaker's intended meaning and communicative goals, particularly in media contexts.

Keywords: *Speech Act Theories, Illocutionary and Perlocutionary Acts, Media Discourse*

Introduction

Speech act theory, a branch of pragmatics, examines how utterances perform functions beyond mere verbal communication. It explores how spoken language is used to execute specific actions or activities through speech (Shaharuddin et al, 2022). J.L. Austin, in his influential work *How to Do Things with Words* (1962), introduced the notion of speech acts, which has since become a foundational concept in pragmatics and the philosophy of language. Austin posited that utterances not only convey meaning but also perform actions, such as issuing commands, making promises, or offering apologies. John Searle, in his book *Speech Acts* (1969), further developed and systematized this theory by categorizing speech acts based on their functions, emphasizing the role of intention in communication. In speech act theory, particularly in the analysis of illocutionary and perlocutionary acts, scholars investigate how language impacts listeners in various domains such as politics, education, media, and interpersonal communication. While the action behind the utterances is called illocution, the effect of utterances on the hearer is called perlocution (Andreawan et. al, 2022). Examining these dynamics offers key insights into how language influences behavior, emotions, and social interactions.

J.L. Austin's foundational work on speech acts, presented in *How to Do Things with Words* (1962), introduced a groundbreaking perspective on language use. Austin posited that utterances do not merely convey information but perform actions. He delineated three categories of speech acts: locutionary acts (the actual utterance), illocutionary acts (the function or intention behind the utterance), and perlocutionary acts (the effects of the utterance on the listener). Austin's focus was on how the act of speaking can achieve various functions, such as making promises, issuing commands, or giving assurances.

John Searle expanded on Austin's theories in *Speech Acts* (1969), providing a more detailed taxonomy and a systematic framework for understanding illocutionary acts. Searle classified illocutionary acts into five types: assertive (statements that convey information), directives (requests or commands), commissive (commitments to future actions), expressive (expressions of emotions or attitudes), and declarative (utterances that change the status of an entity, such as pronouncing someone married). Searle's work emphasized the conditions for successful illocutionary acts, such as the speaker's intention, the listener's recognition of the act's function, and the contextual appropriateness of the utterance.

Despite the extensive body of work on speech act theory by Austin and Searle, there has been relatively little attention given to how illocutionary and perlocutionary acts interact in the speeches of public figures, particularly within the context of media discourse. While previous studies have focused on either illocutionary or perlocutionary acts independently, there is a notable gap in research concerning their combined effects within real-time, performative settings. Furthermore, limited comparative analyses exist that explore Austin's original framework in conjunction with Searle's refinements, especially when applied to dynamic interactions in televised media. This paper seeks to address this gap by analyzing illocutionary and perlocutionary acts in the speech of a talk show host, with specific reference to popular media. The study will explore how Austin's and Searle's frameworks can be applied to understand the illocutionary strategies employed

and the perlocutionary effects on the audience.

Austin's Speech Act Theory

J.L. Austin's Speech Act Theory, articulated in *How to Do Things with Words* (1962), emphasizes the performative aspect of language, where utterances do more than convey information—they also perform actions. Austin categorizes speech acts into three distinct types: locutionary, illocutionary, and perlocutionary acts. A locutionary act involves the basic production of meaningful utterances or sentences. An illocutionary act refers to the speaker's intent behind the utterance, such as making a request, issuing a promise, or offering a warning. Finally, a perlocutionary act refers to the effect the utterance has on the listener, such as persuading, influencing, or causing an emotional response.

Austin further contends that many utterances are performative, meaning they execute an action by the act of being spoken, provided certain conditions are met (e.g., "I apologize" or "I promise"). He introduced the concept of "felicity conditions," which are prerequisites that ensure the success of an illocutionary act. These conditions include factors such as the appropriateness of the context and the roles of the speaker and listener. Austin's theoretical framework underscores the active function of language in communication, where speaking constitutes a form of action that can have a direct influence on both interlocutors.

Sari and Pranoto (2022) examine the speech acts used by Queen Elizabeth II during the pandemic, focusing on both illocutionary and perlocutionary Acts using theories from Austin. The primary emphasis of this study is on the perlocutionary effects, which involve the impact or response generated by the audience. This approach underlines how speech acts go beyond merely expressing the speaker's intention; they also have tangible effects on listeners' emotions, thoughts, and behaviors. Austin's theory allows for a more dynamic understanding of communication, especially in media contexts where the audience's reaction can significantly shape the outcome of the speech act. This perspective is particularly useful when analyzing public figures like politicians, celebrities, or media hosts, as it considers how their speech influences the wider public, which may not always align with the speaker's original intent.

Searle's Speech Act Theory

John Searle extended J.L. Austin's Speech Act Theory by offering a more systematic and comprehensive classification of illocutionary acts in his seminal work *Speech Acts* (1969). Searle's framework centers on the idea that utterances serve as actions in communication, and he introduced a taxonomy that organizes speech acts into five primary categories: assertive (statements that convey information or describe reality), directives (attempts to influence the listener's actions, such as requests or commands), commissive (commitments to future actions, such as promises), expressive (statements that express the speaker's psychological state, such as apologies or congratulations), and declaratives (utterances that alter the external world, such as pronouncing someone married). Searle also highlights the importance of "constitutive rules," which determine the conditions under which a speech act is valid and effective in a given context.

The key distinction between Searle's and Austin's approaches lies in their treatment of

speech acts. While Austin emphasized the differentiation between locutionary, illocutionary, and perlocutionary acts and the "felicity conditions" required for successful communication, Searle offered a more detailed and formalized categorization of illocutionary acts and their functions. Searle advanced the theory by focusing on intentionality and how speakers use speech acts to achieve particular communicative objectives. In contrast, Austin's work is more focused on the performative aspect of language, particularly how utterances enact actions when the contextual conditions are appropriately met.

Novitasari and Gulo (2020) use Searle's theory to analyze the speech acts used by Michelle Obama at the 2020 Democratic National Convention. This study focuses on the success of illocutionary acts, concentrating on how well Michelle Obama intended meaning is communicated and whether the speech act meets specific felicity conditions. Searle's approach offers a more structured and formal classification of speech acts, focusing on whether the intended communicative goal is achieved. This analysis is less concerned with how the audience reacts and more about whether the speech act is successfully executed from the speaker's perspective. In media settings, this approach can be applied to assess how effectively public figures communicate directives, make promises, or state assertions, focusing on their control over the conversation and the successful transmission of their message.

Conclusion

The conclusion highlights a comparison between previous studies that used Austin and Searle's speech act theory. Please refer to table 1 below.

Table 1. Austin vis a vis Searle's Theory in Public Figure's Speech

No	Aspect	Austin's Theory	Searle's Theory
1.	Theoretical Framework	Austin's Speech Act Theory, emphasizing illocutionary and perlocutionary acts	Searle's Speech Act Theory, focusing on classification and success of illocutionary acts
2.	Focus of Analysis	Primarily on the perlocutionary effects of speech acts (the impact on the listener)	Primarily on the success of illocutionary acts (how well the speaker's intentions are fulfilled)
3.	Key Findings	This study highlights how speech acts produce emotional and behavioral responses in the audience, particularly during crisis	This study focuses on whether speech acts meet the felicity conditions and successfully convey Michelle Obama's intention

4.	Perlocutionary Effect	Central to the analysis, examining how the audience responds emotionally or behaviorally to Queen Elizabeth's utterances	Discussed briefly but not the main focus; the study centers on the speaker's control over the illocutionary act
5.	Illocutionary Act	Recognized as part of the speech act but secondary to the perlocutionary impact.	Central to the analysis; categorized using Searle's five types of illocutionary acts (assertive, directive, etc.)
6.	Conclusion	Emphasizes how Austin's theory accounts for both Queen Elizabeth intention and listener response, focusing on how speech acts impact the audience	Concludes that Searle's framework provides a clear classification and focus on the conditions under which illocutionary acts succeed or fail

The results of this study can be used by university students to comprehensively look at how both theories are implemented to analyze public figure's speech. University students and researchers can also consider the results of this study as a platform to conduct further research on public figure's speech by using both theories.

Abstract

This study investigated the voices of vocational school students toward newscasting training programs to improve their public speaking skills. This study used a descriptive qualitative approach, while the data were collected through a survey. This study involved a group of vocational high school students in Lampung, Indonesia, who participated in a newscasting training program at their school. The findings indicated an excitement and interest from the students to develop their public speaking skills through newscasting training programs. This study also showed a positive impact on showing confidence through the students' communication skills. This workshop model can be used by relevant vocational high schools to better enhance the English public skills of the students, which will be useful for their future careers.

Introduction

Speaking is one of the basic skills that everyone has, so everyone can communicate and interact with others. However, not everyone can speak well in front of an audience (public speaking), especially in English. Some reasons cause fear to conduct public speaking in English, such as: lack of confidence, fear of misdirection, and stage fright. In some cases, it caused them to forget the topic that they should be presenting.

Baumeyer (2018) said that public speaking is the process of communicating information to an audience. It is usually done before a large audience, like in school, the workplace, and even in our personal lives. The benefits of knowing how to communicate to an audience include sharpening critical thinking and verbal/non-verbal communication skills. Therefore, it can be concluded that public speaking is the process of delivering topics in front of an audience, whether in the classroom for students or at work for those who are already working. As students, this ability will be very useful when they have to deal with their assignments from their lecturers to be presented or shared in front of the class. The success of public speaking is whether the message delivered can be received by others clearly. That's why teachers must teach some techniques for public speaking.

Currently, English is very important in the world of education. In Indonesia, English is a foreign language that students must learn at school (Liando & Lumettu, 2017). Because as a world language that is used internationally, Indonesia has adopted English as a tool of communication to establish relationships with other countries. English, despite its status as a second language, has become more and more popular among scholars, bureaucrats, and the elites in Indonesia as the use of information technology is increasing (Liando, 2012). However, Palenkahu (2014) emphasized that those who are learning English must have mastered four language skills, namely listening, speaking, reading, and writing.

Learning a language is a demand and desire for those who want to progress because language is an important aspect of human life. Hampp et al (2021) stated that as a tool of communication, language is an essential part of human life. Because with language everyone can connect, can share various experiences and information, and become an important means of communication, without language, a person cannot develop because there is no interaction that occurs with the people around (Tatipanget al., 2021). Nowadays, many people, including Indonesians, learn English because English is an international language. Learning English as a foreign language helped us to communicate with others using English (Maru et al, 2020).

Given the fact that there are not a lot of program or activities that mainly focuses on raising awareness of the importance of public speaking skills and training beginners, especially High School students. Therefore, we conducted an activity that served as a form of our initiatives to help with decreasing the issue. Ultimately, through the assistance of the lecturers and students of Universitas Teknokrat Indonesia, it could help develop an interest and awareness about English public speaking, especially in the newscasting field, among the students of SMAS 1 Muhammadiyah Candipuro, South Lampung. This activity has also been supported by previous studies (Zulia, Atikah, &

Rahmayanti, 2023; Rido, Kuswoyo, Kasih, Lestiani, Sa'adah, Putra, & Kaban, 2023)

Theory and Method

This study used a descriptive qualitative approach and involved vocational high school students in Lampung province, Indonesia. Students who took part in the school's newscasting program became the participants of this study. These students were chosen according to a set of standards. They have to be part of the school's English club and have the principal's and the English language teacher's recommendation. 15 out of the 40 students who participated in the program finished their surveys.

Meanwhile, the data were collected through a survey of students' feelings towards English public speaking training programs conducted at their school. It helped the facilitators assess how well the lesson went and how well the students understood the topic. Ten questions made up the questionnaire, and the students had to select on a scale of 1 to 5, which represents "strongly disagree", "disagree", "neutral", "agree", or "strongly agree". They had the option to ask questions if there was anything in the questionnaire that they did not understand while they were doing it online using Google Drive and their smartphone.

To ensure that the questionnaire items were accurate and consistent, the data from the survey were examined and validated. Following that, frequency counts and percentages were used to conduct a descriptive analysis of the questionnaire results.

Findings and Discussion

The objective of this study was to investigate the voices of vocational high school students toward newscasting training programs at their school. The voices of 15 vocational high school students participating in their school's training programs are examined in this study. The findings are presented below.

Question 1

The results of the survey, which asked participants to score the intelligibility of the materials at a public speaking workshop they attended, are displayed in a bar chart. The majority of respondents, 80%, strongly agreed that the materials presented were very clear, as shown by the chart. 13.3% of the remaining respondents believed that the materials were clear, while 6.7% disagreed, saying that the contents were not sufficiently clear. This outcome shows that 90% of participants agreed that the provided materials were well-structured and understandable. Overall, the survey results indicate that the public speaking session was successful in delivering clear and understandable materials to the majority of attendees. The high percentage of respondents who strongly agree that the materials were clear shows that the presenter effectively communicated their message. The feedback from the small percentage of respondents who disagreed provides valuable insight for improving future presentations to ensure clarity for all attendees.

Fig 1. Clarity of the presented materials

Question 2

The next chart shows that 53.3% of respondents strongly agreed that the session helped enlighten them on understanding newscasting. Furthermore, 40% of respondents agreed, indicating that the materials provided to aid in their understanding of newscasting have been effective. However, 6.7% of the respondents strongly disagreed, indicating that the session's influence on newscasting comprehension may yet be improved. Overall, the data reflected 90% of positive responses to the session's content and delivery, but some areas could be further developed to enhance participant comprehension. This feedback was valuable in refining future sessions to better meet the needs of those seeking to improve their understanding of newscasting.

Fig 2. Effectiveness of materials given to understand speech

Question 3

Based on the following chart, 73.3% of respondents strongly agreed that the provided resources encouraged them to learn newscasting. Additionally, 20% of students agreed that the resources were helpful in their public speaking learning journey. The remaining 6.7% strongly disagreed with the statement, indicating that the majority of students found the resources to be beneficial. This data suggests that the provided resources play a significant role in motivating students to improve their public speaking skills through newscasting. Overall, the majority of students found the resources to be effective in helping them learn newscasting. The high percentage of students who strongly agreed with the statement shows that the resources were not only helpful but also essential in their learning process. With such positive feedback, it is clear that providing resources for newscasting learning is a valuable investment in a student's education.

Fig 3. Effectiveness of materials to motivate learning speech

Question 4

The next chart shows that 60% of the respondents strongly agreed that the use of examples and practices helped them understand newscasting better, with 33.3% supporting it by agreeing to the statement. The 6.7% remaining disagreed that examples and practices are effective in improving their understanding of newscasting, which can be helped by providing additional resources and support tailored to individual learning styles. By offering a variety of teaching methods and materials, educators can better cater to the needs of all students, including those who may not benefit as much from examples and practices. It is clear from these results that the majority, more than 90%, of respondents find that using examples and practices is beneficial in enhancing their comprehension of spoken language. This suggests that incorporating more examples and opportunities for practice in language learning materials could be a valuable strategy for educators looking to support their students in improving their listening skills.

Fig 4. Effectiveness of the use of examples and practices to learn speech

Question 5

The results also indicated that the greatest portion of the column chart indicates that 66.7% of the students strongly agreed that the resources provided helped them learn new information that they were not previously aware of. The second largest segment shows that 26.7% of students agree with this statement, while only 6.6% disagree, which indicates that they have known parts of the materials discussed. The majority of students strongly agreed with the effectiveness of the resources, which highlights the importance of providing accessible and engaging materials to enhance learning outcomes. It is clear that the resources utilized in this community service had a significant impact on expanding students' knowledge and understanding, which is in line with the purpose of this activity, that is to spread awareness about the importance of public speaking.

Fig 5. Materials presented as new information for students

Question 6

The response to a survey question asking students to rank how much the provided materials motivated them to improve their fluency and speaking abilities is shown in the column chart. The results showed that 66.7% of respondents strongly agreed that they found the materials extremely motivating, while 20% somewhat agreed. The rest of the respondents were divided into 6.7% staying neutral on the matter and another 6.7% disagreeing. This could be solved by providing a wider range of materials to cater to different learning styles and interests. Ultimately, the goal should be to create materials that are not only informative but also inspiring and engaging for all students. Overall, the majority of the students seem to have been positively impacted by the provided materials in terms of improving their confidence and public speaking skills.

Fig 6. Influence of materials given to improve the students' skill

Question 7

The chart indicated the results of a survey question that asked students about whether or not the materials and presentation about newscasting helped boost their confidence in public speaking. The chart shows that 73.3% of the students expressed their strong agreement with the effectiveness of the materials and presentation in boosting their confidence in public speaking. This high percentage suggests that the majority of students found the resources to be very helpful in improving their public speaking skills. The other 20% were also agreeing, while the rest, 6.7%, were staying neutral. The neutral responses may suggest that there is room for improvement in tailoring the materials and presentation to better meet the needs of all students. The results of the

survey indicate that the materials and presentation were successful in achieving their goal of increasing students' confidence in speaking in front of an audience. Overall, the survey results demonstrate the value of providing resources to support students in developing their public speaking skills.

Fig 7. Influence of materials given in boosting students' confidence

Question 8

The next chart indicates that 80% of the respondents strongly agreed that the delivery of the presentation intrigued them enough to pay attention throughout the session. While the other 13.3% agreed and the rest, 6.7%, somewhat disagreed with the statement, which proves there is still room for improvement. The high percentage of agreement suggests that the presenter was able to effectively engage the audience and capture their interest. It also implies that the content of the presentation was compelling and well-organized, leading to a positive reception from the audience. This level of agreement from the respondents indicates that the delivery of the presentation was successful in achieving its goal of holding the audience's attention.

Fig 8. Students' attention toward the delivery of materials by presenters

Question 9

The following chart shows that 80% were in strong agreement about how the materials presented were in line with their interests, while the other 20% also agreed with the statement. This high level of agreement indicates that the materials are effectively catering to the interests of the majority of the audience. Presenters need to continue creating content that resonates with their target audience in order to maintain engagement and interest. This proves that the community service activity to promote public speaking through newscasting was very much needed for the students. This

fulfilled the goal of the activity to the extent that students were actively engaged and interested in the content being presented.

Fig 9. Relevance of students' interest and the materials given

Question 10

The chart represents the agreement of the respondents that the materials of the presentation by the presenters are well structured. The biggest percentage was 86.7% strongly agreeing, while the rest, 13.3%, were somewhat agreeing. Overall, the data shows a high level of satisfaction with the structure of the presentation materials. The majority of respondents clearly felt that the presenters had organized their materials effectively. This positive feedback indicates that the presenters were successful in delivering their content clearly and coherently, achieving the goal of the activity, which is to promote the importance of public speaking, understandably and compellingly.

Fig 10. Delivery of the presentation

Improved confidence, articulation, fluency, and professionalism when speaking in front of crowds and even the camera were the main objectives of the newscasting training program. The students were taught the value of public speaking in addition to other techniques for improving speaking skills, such as tone, eye contact, gestures, and fluency. The students rated their entire experience by filling out a questionnaire after the session. Most of them said the session was easy to grasp, beneficial, and effective in helping them speak English more fluently. Although the column charts showed that the students had a solid comprehension of the subject matter, some thought that the exercises had not adequately prepared them for public speaking, indicating that they would have benefited more from a different kind of instruction, such as theoretical understanding.

The results and the feedback provided suggest that the newscasting session's objective of assisting students in learning public speaking by improving their English articulation

and speaking abilities was achieved. Public speaking is an essential soft skill for success in business, in school, and in everyday life. The capacity to communicate in front of an audience while communicating information professionally and with clarity—a skill that will be useful for high school students in the workplace.

Mastering English, especially speaking skills, is important for students to allow them to communicate with other people globally (Linse 2005). It is infrequently used as a medium language to communication daily (Broughton, 2003). Additionally, public speaking skills are very essential in various situations, including academic, work, and everyday life (Rido et al, 2023). The students in this class are expected to be able to communicate in English. In the end, the students should be able to communicate with their friends, teachers, and people around them in an accurate, fluent, and appropriate way.

Students who have mastered public speaking are more qualified to communicate their thoughts with confidence and clarity, which opens up more doors for development. Overall, the newscasting session's favorable results highlight how crucial it is to provide kids the chance to hone their public speaking abilities in order for them to succeed in a cutthroat and dynamic world.

Conclusion

In conclusion, the results of this study demonstrated a high level of student satisfaction, highlighting the materials' clarity, efficacy, and motivation. In addition to boosting students' self-assurance in public speaking, the workshop demonstrated the value and organization of the subject matter, which advanced their skill development as a whole.

The results also highlight how important it is to include public speaking instruction in high school curricula. Gaining proficiency in this area enables students to communicate concepts clearly and confidently, promoting both professional and personal development. This initiative's success highlights the ongoing significance of fostering public speaking abilities and provides insightful information for educators, policymakers, and researchers who aim to improve high school students' communication skills.

Universitas Teknokrat Indonesia¹²³⁴

Abstract

The global development of the COVID-19 pandemic over the past two years demands the use of virtual learning as a new method of instruction. The English lecturer was assisted in conducting a flipped classroom, integrating remote teaching and learning activities into the course due to the restricted face-to-face interaction. English lecturers were required to employ a technique that enables the students to deepen their understanding through real-world connection to context, collaboration, and projects, so-called project-based tasks in the English Major Program. Students are expected to create, plan, and complete a project as a product, presentation, or publication when given a project-based task. The students are encouraged to take a more active role in gathering the data or sources, developing their speaking abilities, and creating their projects. Furthermore, it enables the lecturers to more accurately evaluate the student's comprehension and highlight the student-centered activity. The project-based task has been adopted in several fields, including science, language, psychology, law, and even education in face-to-face classrooms, which has demonstrated a considerable improvement among higher education students. As a result, the objective of this study is to investigate project-based task delivery for pedagogical subjects that, particularly in a virtual learning environment, require greater real-world exposure and experience. A total sample of 125 students from the three pedagogy subjects (Micro Teaching, Teaching English for Young Learners, and English Teaching Media) participated in this research. Our findings show that the majority of the students actively participated in each stage of the project-based task and contributed significantly to its creation. Additionally, it enhances online learning activities. This investigation also broadens our understanding of learning strategies for virtual classes.

Keyword pedagogy, project-based task, virtual learning

Introduction

Due to the COVID-19 epidemic, lecturers have recently had to consider learning media (Salehudin, 2020; Oktaviani and Mandasari, 2020), platforms (Putri and Sari, 2020), and even methodologies (Sari and Wahyudin, 2019; Mandasari and Wahyudin, 2021) that are compatible with distance learning but also fit with learning goals courses, particularly practice courses. The lecturers must use a method that enables the students to gain a deeper knowledge of the material through cooperation, projects, and connections to the real world. Activities that provide a student-centered and real-world context must be introduced to students (Avci and Adiguzel, 2017; Mollaei and Rahnama, 2012; Rüschoff and Ritter, 2001).

In terms of online learning, some strategies for online learning, in general, are reviewed, particularly in project-based learning settings. Online questions and responses, reports, discussions on message boards, email, instant messages, and other forms of online communication typically make up the project-based learning process on the internet (Koushki, 2017). In project-based learning, students gain knowledge by using problem-solving techniques to address the project's specified difficulty (Simamora, Sidabutar, and Surya, 2017). Therefore, when teamwork interaction mechanisms are used, teaching strategies like reflection and summaries of what students learn from projects, as well as small group activities in class, which are frequently used in traditional classes, can be more successfully carried out in an online learning environment. Recently, the educational setting and learning process have shifted toward performance-based assessments, portfolios, and group projects. The curriculum of Indonesian higher education also explicitly states those teaching tactics and methods for project-based learning in an online environment are increasing.

Higher education in Indonesia is currently transitioning from competency-based instruction to project- and case-based learning. It adheres to the most recent academic curriculum, known as Merdeka Belajar-Kampus Merdeka (MBKM), which strives to provide university students the opportunity to study for up to three semesters or 20 credits outside of their study program or university. This argument is now under Nadiem Makarim's idea (a notable expert on curriculum). As a result, the percentage of case method and team-based project-based learning occasionally increases. Universities are urged to create a program of activities focused on the attainment of eight Key Performance Indicators following the Ministerial Decree of Education and Culture No. 754/P/2020 (KPI). One of them is how many undergraduate courses include team-based project learning or case approaches in the evaluation weights (Belmawa Kemendikbud, 2021).

To meet this requirement, higher education has created innovative student-centered teaching and learning approaches, such as project-based learning (Barrett, 2010). PBL is a dynamic paradigm that is excellent for enhancing students' teaching-learning processes (Chen, Kolmos, and Du, 2021) and focused on group members working together cooperatively while independently directing their work to achieve a goal (Clark, 2014). Moreover, project-based learning is seen as a type of instruction in which pupils respond

to issues or problems encountered in the real world by engaging in a prolonged process of inquiry (Wu and Krajcik, 2006). Project-based learning involves students in real-world settings where they may investigate and apply course material to complicated challenges related to the professional activity they are training for (Almulla, 2020). The project-based learning approach fosters students' critical thinking abilities, gives them room to express their creativity, motivates them to collaborate, and instructs them to find knowledge independently and to work as a team. PBL, in particular, exposes students to actual issues that they must consider and research to resolve. To do this, they must collaborate, incorporate the expertise of all group members, and work both alone and as a team (Wiek, Withycombe, and Redman, 2011).

The project-based task has been adopted in several fields, including science, language, psychology, law, and even education in face-to-face classrooms, which demonstrated a considerable improvement among higher education students (Melguizo-Garín, Ruiz-Rodríguez, Peláez-Fernández, Salas-Rodríguez, and Serrano-Ibáñez, 2022). However, with the fastest switch in teaching and learning mode into virtual learning, the PBL is widely possible to be implemented in virtual learning since the purpose is student-centered learning. Additionally, in virtual teaching, a lecturer has to use an activity that encourages students to be more active and do more tasks to improve their understanding. Online educators play a crucial role in the teaching and learning process; as such, they need to possess a certain set of skills and qualities in addition to subject-matter expertise (Vlachopoulos and A. Makri, 2021). Through technology, lectures are still responsible for exposing students to not only knowledge but also soft skills (Nadiyah and Faaizah, 2015). Thus, PBL, which is required to be implemented by the Indonesian government, can be a strategy in virtual learning, especially in pedagogy subjects which equip students with many practical experiences and social skills although it is in virtual mode.

Therefore, this research aims to implement the project-based task for pedagogy subjects, particularly in a virtual education setting in Micro Teaching, English Teaching Media, and Teaching English for Young Learners subjects in higher education. As English Education students, their graduates' profile is mostly teaching in school from various levels, young learners to high school levels. The students have to master pedagogy subjects very well although they learn them via distance learning, so student-centered activity so-called project-based learning has to be implemented.

Theory and Method

A total of 125 students from the English Education study program at Universitas Teknokrat Indonesia took part in the study. The sample consisted of students taking three pedagogy subjects: 47 students in the Micro Teaching class, 34 students in the Teaching English for Young Learners class, and 44 students in the English Teaching Media class. A convenience sampling technique was used since participants were enrolled in subjects taught by some of the authors of the study.

This study used descriptive qualitative research since the aim of this study is to implement project-based learning in pedagogy courses during online learning.

Additionally, the questionnaires were applied after the students had carried out a piece of group work in their subject using the PBL methodology. All participants gave their consent to participate in the study.

The questionnaires were applied after the students had carried out a piece of group work in their degree subject using the PBL methodology. Each respondent received a Google form link that had statements categorized into four aspects on the questionnaire. A 4-point Likert scale with the options strongly agree, agree, disagree, and strongly disagree was used in this survey. The mean score and standard deviation were used to examine the survey data (SD). Strongly disagrees (0.99-1.00), disagrees (1.00-1.99), agrees (2.00-2.99), and strongly agrees (3.00-4.00) were used to evaluate the questionnaire.

Findings and Discussion

To successfully implement project-based learning, some stages should be considered. There are six stages in implementing a project-based approach, namely preparation, planning, research, conclusion, presentation, and evaluation (Pham, 2018). On the other hand, there are also four stages of activity in PBL, such as topic selection, planning, researching, and product-making (Wrigley, 1998). Therefore, the writers combine the stages from Papandreou (1994) and Wrigley (1998) but adapt and rearrange the stages to match the online learning environment. The adaptation of stages was made by removing the conclusion from Papandreou (1994) because it is merged into product-making and evaluation. Another adaptation was made by removing topic selection because it is merged into the preparing stage. These adapted stages for this study are illustrated in Figure 1.

Figure 1: The stages in implementing project-based adapted from Papandreou (1994) and Wrigley (1998)

In the first stage, preparing, the lecturer introduces the learning objectives and/or topic to the students, and has a discussion and question-answer session. Next, in the planning stage, the lecturer and students decide the type of information to be collected and assign the duty for each individual. Third, the students gather the data from different sources individually or in group work in the research stage. Fourth, the students create the project or product in the product-making stage. Fifth, the students hold a project or product presentation in the class or an event. Lastly, the lecturer and students evaluate the whole process to improve the teaching and learning process in the next following semester, especially using PBL. Following the adapted stages, the researchers implement them in the pedagogy class, namely the English Teaching Media class, the Micro Teaching class,

and the Teaching English for Young Learners class. The detailed activities of the implementation of project-based learning in the pedagogy class are stated in Table 1 below.

Table 1: Stages in implementing project-based learning in online learning for pedagogy subjects

Stages	Media for Young Learners		
Preparation	Students were given questions on the <i>Forum menu</i> of SPADA to be discussed that are related to: 1. The newest teaching media. 2. The most popular teaching media. 3. The characteristics of students.	Students were given questions on the <i>Forum menu</i> of SPADA to be discussed that are related to: 1. The newest trend among teachers. 2. The most popular activities in learning English. 3. The most important requirement is to be a teacher.	Students were given questions on the <i>Forum menu</i> of SPADA to be discussed that are related to: 1. The newest topic to teach young learners. 2. The most popular references are used to teach young learners.
Planning	Students made a group, wrote the timeline, and decided on the steps they are going to do to make a product, consulting with the lecturer through synchronous meetings via <i>zoom</i> .	Students made a group, wrote the timeline, and decided on the steps they are going to take to make a product, consulting with the lecturer through synchronous meetings via <i>zoom</i> .	Students made a group, wrote the timeline, and decided on the steps they are going to do to make a product, consulting with the lecturer through synchronous meetings via <i>zoom</i> .
Research	Students researched on their own to find the information related to the products and shared their findings in the <i>submission menu</i> provided on SPADA.	Students researched on their own to find the information related to the products and shared their findings in the <i>submission menu</i> provided on SPADA.	Students researched on their own to find the information related to the products and shared their findings in the <i>submission menu</i> provided on SPADA.
Product-Making	Created a media to teach English.	Created a virtual video to teach English.	Creates children's stories/literature.
Presenting	Students presented their products in the students' exhibition in July 2022 at the Students' center of Universitas Teknokrat Indonesia	Students presented their products in the students' exhibition in July 2022 at the Students' center of Universitas Teknokrat Indonesia	Students presented their products in the students' exhibition in July 2022 at the Students' center of Universitas Teknokrat Indonesia
Evaluating	The lecturer and students evaluate the whole process of PBL activity.	The lecturer and students evaluate the whole process of PBL activity.	The lecturer and students evaluate the whole process of PBL activity.

From Table 1 above, mostly the activity on every stage was the same which required communication in the SPADA, a learning management system used by Universitas Teknokrat Indonesia, and a zoom, a platform communication for the synchronous meeting.

In the first stage, lecturers provided some questions that led students to the topics and learning objectives in a forum of SPADA. The forum is an asynchronous activity; it happens not in real-time. Students may use their background knowledge to answer those questions, read the material given by the lecturer, watch the video related to the keywords, and so on. Besides answering these questions, students can also comment on their friends' answers. After knowing the learning objectives, the students had a synchronous meeting via Zoom and were divided into breakout rooms to make a group and have a discussion about the timeline, the steps, and the duties of their product. In this stage, the lecturer was moving from one breakout room to another to monitor and facilitate the students' activity. In the next stage, after their planning was fixed, the students were doing research to support their product-making, it can be about the underlying theory, types of products from then and the recent ones, and or information to be adapted/adopted in developing the product. The students had to make a resume about their research and submit it on SPADA in the submission menu. Then, product-making was done, which took several meetings/weeks because students needed to consult their product with the lecturers in terms of the language used or content, and other supporting details of the products. This was necessary because the students were going to have a product exhibition offline at the end of the semester. After that, at the end of the semester, as their final project, students held a product exhibition in the Universitas Teknokrat Indonesia students' center.

Figure 1: The students' exhibition of their teaching media in July 2022

Figure 1 shows one of the teaching media created by the students using the Canva platform during the PBL activity in the English Teaching Media class. In this exhibition, students had a presentation and a question-and-answer session with both the lecturer and visitors.

Figure 2: The student's presentation of their products in July 2022

Figure 2 shows one of the virtual videos in teaching English created by the students during the PBL activity in the Micro Teaching class. The virtual video was made as interesting as possible to attract students' motivation in English class by using filmora video editor which was taught by the lecturer. In this exhibition, students exhibited their videos and had questions-answer sessions both with the lecturer and visitors.

Figure 3: The student's presentation of their products in July 2022

Figure 3 shows two examples of children's stories for teaching English to young learners under the theme of Sustainable Development Goals (SDGs). These children's stories were created to fulfill the PBL activity in Teaching English for Young Learners class. The students utilized Storyweaver.org.in as a free story template for their product, which was introduced by the lecturer. In this exhibition, students shared their stories and had questions-answer sessions both with the lecturer and visitors.

Finally, the lecturer and students evaluated the whole process of the PBL activity. This evaluation was done by filling out the questionnaire. The aim was to improve the quality of teaching and learning using PBL and students' opinions towards the activity (Takkidin, 2020). The effectiveness of PBL for students' online learning processes is investigated at

this stage. Table 2 displays the means, standard deviations, and interpretations.

Table 2: The students' opinion toward PBL in online learning

Aspects	Statement	Mean	SD	Interpretation
Content Knowledge	CK1	3.248	0.677	Strongly Agree
	CK2	3.312	0.677	Strongly Agree
	CK3	3.416	0.625	Strongly Agree
	CK4	3.232	0.649	Strongly Agree
	CK5	3.272	0.614	Strongly Agree
Research skill	RS1	3.224	0.75	Strongly Agree
	RS2	3.328	0.669	Strongly Agree
	RS3	3.184	0.545	Strongly Agree
	RS4	3.216	0.679	Strongly Agree
	RS5	3.28	0.59	Strongly Agree
Collaboration	C1	3.288	0.62	Strongly Agree
	C2	3.328	0.645	Strongly Agree
	C3	3.272	0.652	Strongly Agree
	C4	3.296	0.635	Strongly Agree
	C5	3.272	0.688	Strongly Agree
self-efficacy	S1	3.208	0.733	Strongly Agree
	S2	3.36	0.614	Strongly Agree
	S3	3.216	0.642	Strongly Agree
	S4	3.048	0.728	Strongly Agree
	S5	3.232	0.731	Strongly Agree

Based on the questionnaire's findings, the students' reactions were generally favorable. Additionally, it led to various means and standard deviations for every statement. With a mean score of 3.416 points, statement CK3 produced the best results. It showed that the majority of students concurred that PBL on online learning for pedagogy subjects was extremely contributing to the students' understanding of content knowledge. The lowest outcome, on the other hand, came from statement S4, which had a mean score of 3.048 points, where most of the students agreed that they might learn more without the project implemented in these subjects.

The majority of students claim that the PBL makes their online learning experiences more challenging, rewarding, interactive, and inspiring, according to the findings of a survey. They can use as many sources and any kind of works of literature related to the topics discussed. Because of their self-finding source and team, they seem to find it easy to set aside and finish all the projects using the PBL method, although it was done online. Following that, students may easily access, obtain, read, and evaluate all of the instructional resources they require for their studies utilizing this PBL method. This conclusion is supported that PBL in online learning enables students to adjust the literature and learning style based on their preferences (Tsai, Chen, and Chang, 2019). These students can more easily adjust to achieving their goals. Additionally, it also boosts their social skills through collaboration and real-life projects. The e-course should also expose students to the actual project by implementing PBL (Keser and Karahoca, 2010). As pedagogy courses will be their practice and expertise to teach in the future, students have to experience practical activities from PBL. Experience also improves the understanding of the material [25]. Moreover, by doing the project, students' critical

thinking skills improve. Surprisingly, PBL also covers cognitive, affective, and psychomotor skills, and even low achievers feel excited and motivated to do a project. As a result, how pedagogy subjects are taught in a virtual environment is tightly related to the supportive and favorable methods that may boost their practical experience.

Conclusion

The findings of this study can be used as a reference to implement PBL in an online class, especially in pedagogy subjects that need practice or life experience. According to the results, the majority of students agreed with almost every allegation. They also showed the influence of PBL on their content knowledge, research skills, collaboration, and self-efficacy. They possess content knowledge by conducting research and collaboration during virtual learning. They even evaluated the whole process of teaching and learning activities. The majority of the students actively participated in each stage of the project-based activity and made a considerable contribution to its construction, according to our findings. It also improves the quality of online learning activities. Additionally, this inquiry deepens our comprehension of online learning techniques. Future research should focus further on any potential effects of utilizing PBL in online learning. It would be fascinating to examine this issue further. In light of this, it is thought that PBL in online learning is a useful method for supporting online learning environments.

Acknowledgments

The writers would like to show their gratitude to the Rector of Universitas Teknokrat Indonesia for supporting this research and also Teknokrat Education Foundation, which has funded this research. Moreover, the writers would like to say thank you to the students of the English Education study program who became participants in this research.

Universitas Teknokrat Indonesia

Abstract

This study explores the voices of pre-service teachers regarding their teaching practicum experiences at secondary schools in Central Lampung, Indonesia. The research aims to understand the challenges, benefits, and overall perceptions of pre-service teachers during their practicum, providing insights into the effectiveness of the program in preparing them for the teaching profession. A qualitative approach was employed, with data collected through semi-structured interviews and classroom observations involving 15 pre-service teachers from a teacher education program. Thematic analysis was used to identify key themes related to their experiences, including difficulties in classroom management, adaptation to real teaching environments, and the support received from mentor teachers. The findings reveal that while pre-service teachers encountered significant challenges, such as managing student behavior and implementing lesson plans, they valued the practicum as a crucial part of their professional development. The study highlights the need for improved mentoring systems and more practical teaching strategies in teacher training programs. These findings have implications for enhancing teacher education curricula, ensuring that pre-service teachers are better equipped to handle the realities of classroom teaching.

Keyword Pre-service teachers, teaching practicum, secondary schools, teacher education

Introduction

According to Trent (2013), one of the most important and significant phases of teacher preparation is the teaching practicum. Pre-service teachers' motivations, attitudes, and engagement with the teaching profession are enhanced by the teaching practicum, which exposes them to the realities of teaching English to students who speak other languages and increases their understanding of the intricacy of contemporary classroom practices (Fajardo & Miranda, 2015). However, some students may find that the teaching practicum is among the most difficult, confusing, demanding, and disappointing experiences they have during their BA degree (Farrell, 2001; Ferrier-Kerr, 2009; Trent, 2013). Pre-service teachers' learning experiences may be impacted by the teaching practicum, regardless of the consequences it may have on them. These effects may corroborate or contradict their initial opinions of the program.

Pre-service teachers are students in the education department who are prepared to become professional teachers in the future through training and education. They study a variety of theories during this course, including educational management, pedagogy, educational psychology, and didactics of a particular subject. In the third year of their four years of study, they also carried out a teaching practicum. For them to finish their studies and receive their degree, they must complete this teaching practicum. Teaching is more than just imparting knowledge to students. It goes beyond that. In order to engage students in the learning process, teachers must be skilled in both lesson delivery and environment creation (Shinta & Aprilia, 2020). This assertion is consistent with Cretu's (2019) observation that educators face ongoing challenges in their ability to adapt. It is expected of teachers to possess a broad range of competencies in both pedagogical and specialty fields. Pre-service teachers need more than just a ton of theories to learn to become skilled teachers. Thus, one method used by universities to help students develop their teaching abilities is the teaching practicum. It is intended that the pre-service teacher would be able to put what they have learned in the classroom into practice during this practicum. Their first step toward developing their professional competencies is this teaching practice. Through this process, they can observe and comprehend how a teacher manages a challenging assignment in a classroom. Pre-service teachers will benefit from an authentic teaching experience in developing their human relations, practical skills, and other essential components of teaching efficacy (Ashton in Shinta and Aprilia, 2020).

This assertion is consistent with the claim made by Cretu (2019) that assessments of teachers' adaptability are constant. In both their areas of expertise and teaching, teachers are expected to possess a wide range of skills. It takes more than just absorbing a lot of theory during training for aspiring teachers to develop their teaching abilities. Consequently, one method by which universities can enhance their students' teaching skills is through tutoring. It is hoped that pre-service teachers will be able to put their college education to use in this practicum. Their first step toward enhancing their professional skills is this teaching practice. Through this process, they are able to observe and comprehend how teachers carry out difficult tasks in the classroom. Pre-service teachers who have quality teaching experience will be better equipped to

develop their interpersonal skills, practical knowledge, and other necessary teaching-related skills (Ashton, Shinta, and Aprilia, 2020).

This method of instruction is also used by the education department at Technocrat University. The teacher candidates complete their teaching practice under the supervision of university supervisors, education service lecturers, and school supervisors, who are teachers. A year before their actual teaching practice, prospective teachers at Technocrat University are required to complete pre-teaching practice. In this stage, aspiring educators will spend a week observing in the school of their choice. They will watch instructors in action as they run their classes. The purpose of this pre-teaching practice is to assist aspiring teachers in getting ready for their actual teaching experience. Conversely, aspiring educators view the teaching practice phase as a difficult and intricate one. They felt a lot of anxiety despite having studied a great deal of theory and having had practice and pre-teaching training before starting school. As per Hastings (2004), pre-service teachers are concerned about various aspects of their teaching practice, such as the school environment, role of pre-service teachers, relationships with mentors at school, and the impact of these aspects on their teaching performance. Prospective teachers are surprised to learn that teaching practices vary from what they had anticipated (Stokking et al., 2003). Because of this, even with their preparations, a lot of them still struggled to match their expectations with reality.

Literature Review

Engaging in a teaching practicum is crucial for the professional development of preservice teachers, as it has the potential to influence their beliefs and perspectives on teaching. According to Wilson (2006), pre-service student teachers considered teaching practicum one of the essential components of teacher education. It is a mandatory component in teacher education programs, including those in Thailand, ensuring completion before graduation. During the teaching practicum, preservice student teachers have the opportunity to observe their school mentors as experts and subsequently apply what they have learned through hands-on experience. Additionally, the involvement of pre-service student teachers in practical field experiences enables them to establish connections between theoretical knowledge and real-world practice. The teaching practicum is regarded as the initial occasion when pre-service student teachers can actively apply their theoretical knowledge in practice. Previous research has highlighted challenges related to school principals and, notably, school mentors, as expressed in various studies. For instance, Hastings (2004) and Sağlam (2007) investigated the challenges and perceptions towards teaching practicum and found that support, especially from mentors, plays an important role in teaching practicum.

The researcher conducted an exploration of previously published articles relevant to the ongoing research initiative. The first article in this review is titled "Muffled Voices from Thai Pre-Service Teachers: Challenges and Difficulties during Teaching Practicum," authored by Pariwat Imsa-ard in the year 2021. The primary objective of this particular article is to research and investigate the challenges and difficulties faced by pre-service students aspiring to become teachers in Thailand during their teaching

practicum. Within the confines of this study, an in-depth examination is undertaken to elucidate the pre-service perceptions of student teachers, shedding light on the challenges and difficulties that act as impediments to their teaching practice. Furthermore, the research adopts a methodological approach known as the convergent mixture method, where a combination of questionnaires and semi-structured focus group interviews is employed as the principal research instruments. The cohort under study consists of 78 Thai pre-service teacher students who have enrolled in the Bachelor of Education degree program at community universities in Thailand. The findings of this comprehensive investigation reveal the existence of four distinct dimensions, each delineating various obstacles and challenges encountered in the teaching practice. These dimensions encompass communication factors, teaching factors, student-related factors, and support-related factors, providing a nuanced understanding of the multifaceted landscape surrounding the experiences of pre-service teachers in Thailand.

The second article, titled "Teaching Practicum Experiences: Pre-service English Teachers' Self-Reflections of Their Professional Growth", authored by Yuliani Dwi Astuti and Nur Arifah Drahati in the year 2022, serves as the focal point of the second phase of exploration. The primary objective of this scholarly piece is to delve into the intricate nature of individual student-teacher reflection throughout their immersive teaching experiences within the teaching practice context. Within the framework of this research, a deliberate effort was made to comprehensively understand and analyze the multifaceted aspects of pre-service teachers' self-reflection, emphasizing their professional growth. The methodological approach employed in this study involved the collection of data through in-depth interviews conducted with three pre-service teachers, each interview spanning a duration of 20-30 minutes. The nuanced findings encapsulated in this article shed light on the profound impact of reflective practices on the participants' awareness. The reflections not only contribute to an enhanced understanding of their learning environment but also illuminate the pivotal roles of teacher ability, creativity, and the effective management of time and classroom dynamics in shaping and influencing the teaching process. Through this detailed examination, the article enriches the discourse on the vital interplay between reflective practices and the professional development of pre-service English teachers during their teaching practice.

The third article, co-authored by Mahboubeh Taghizadeh and Atena Ejtehadi and entitled "Investigating pre-service EFL teachers' and teacher educators' experience and attitudes towards online interaction tools," unfolds as a comprehensive examination into the intricate dynamics of pre-service English teachers and their instructors when engaging with online interaction tools. The overarching objective of this research endeavor is to meticulously scrutinize and elucidate their experiences, attitudes, and perspectives in the realm of utilizing online interaction tools for language development. Within the ambit of this study, an intricate exploration is undertaken to unravel the multifaceted layers surrounding the participants' viewpoints on the effectiveness of online interaction tools in fostering language development. Furthermore, the research seeks to uncover the nuanced attitudes harbored by these educators and pre-service teachers towards the practical application of these tools, while concurrently delving into the myriad challenges encountered in the landscape of online interactions. The participant pool for this insightful research comprised 100 MA students specializing in

Teaching English as a Foreign Language (TEFL) and seven esteemed teacher educators affiliated with the Iran University of Science and Technology (IUST). The methodological arsenal deployed for data collection included four meticulously crafted questionnaires designed to elicit responses pertaining to participants' experiences, knowledge, attitudes, and challenges pertaining to the utilization of online interaction tools in English language classes. In addition to the quantitative data gleaned through the questionnaires, the research incorporated a qualitative dimension through semi-structured interviews. These interviews, conducted with the teacher educators, served as a valuable avenue for gaining a profound understanding of their perspectives and insights concerning the realm of online interactions in the educational landscape. The comprehensive findings unveiled within this scholarly contribution shed light on the prevalent lack of awareness among pre-service teachers regarding the diverse array of online interaction tools and their potential efficacy in language development. Despite this, a positive disposition was discerned among these educators towards the incorporation of interaction tools in language classes. The challenges that emerged as significant hurdles in this domain encompassed issues such as inadequate technical infrastructure, limited knowledge, and collaboration-related impediments. In sum, this article serves as a pivotal source in comprehending the intricate interplay of experiences, attitudes, and challenges encountered by pre-service English teachers and their educators in the dynamic realm of online interaction tools

Theory and Method

In the process of carrying out this research initiative, the researchers deliberately employed the methodological approach of qualitative descriptive methods, a research framework renowned for its focus on capturing and narrating the intricacies and nuances inherent in the subject of study. According to Moleong (2010: 6) that descriptive qualitative research is a study that aims to understand the phenomenon of the subject of research, behavior, perception, motivation, action, etc., holistically, and the way of describing the results in the form of words and sentences. Based on Punch (1998:29), qualitative research does not use numerical data. He also states that the research question and Methods are more general at the start and become more focused as the study progresses. Creswell (2013), in “Qualitative Inquiry & Research Design,” highlights that qualitative descriptive methods are well suited to gaining in-depth understanding of phenomena in real contexts, such as teacher preparation. Taking into account the nuanced intricacies outlined earlier, the researcher has deliberately and thoughtfully opted to employ the descriptive qualitative research methodology in the implementation phase of this study. This strategic decision is grounded in the profound compatibility of this research method with the distinctive nature and overarching objectives that underscore the essence of the study. This research, in its essence, embarks on a comprehensive endeavor to delineate and elucidate in intricate detail the myriad experiences and challenges encountered by prospective teachers navigating the landscape of teaching practice. The primary focus of this exploration is centered on 15 pre-service teachers from Class 20 at the English Education Major at Indonesian

Technocrat University. This specific group, specializing in English education, is actively engaged in practicum experiences at educational institutions such as SMAN 1 Trimurjo and MAN 1 Central Lampung. This research was conducted during the implementation of Kurikulum Merdeka, employing interview procedures as the main data collection technique. The interviews, structured to extract in-depth insights, were specifically tailored to illuminate the challenges faced and experiences gained by the participants throughout their practicum. The result of the interview is then analyzed and interpreted through coding, analyzing, and generalizing bigger themes in order to reveal the objective of this study.

Findings and Discussion

Based on the experiences shared by 15 pre-service English teachers during their teaching practicum in Senior High Schools in Central Lampung, three major themes emerged, which are elaborated below:

1. Overall Perceptions of Pre-service Teachers During Their Practicum

The pre-service teachers generally perceived the teaching practicum as a crucial phase in their professional development. They expressed that the practicum bridged the gap between theoretical knowledge and practical teaching. One participant reflected, *"It was the first time I could really see how everything we learned in class played out in a real classroom. It felt like putting the pieces of the puzzle together."* For many, the practicum confirmed their passion for teaching, while for some, it raised doubts about their readiness. They felt that the practicum was an eye-opening experience that gave them a taste of the complexities and rewards of teaching.

Despite the importance of the practicum, several pre-service teachers noted a discrepancy between their expectations and the realities they encountered in the classroom. Before the practicum, many believed teaching would be straightforward, but they quickly realized it involved more than delivering lessons. One teacher remarked, *"I thought I just needed to explain the material and everything would go smoothly, but I was wrong. Students need more than explanations."* This realization was shared by many, indicating that teaching required more holistic skills than they initially anticipated.

Pre-service teachers also shared that the practicum helped them develop a deeper understanding of students' diverse needs. While they initially assumed that students would be similar in their learning styles, they found that students exhibited a wide range of abilities, motivations, and behaviors. One participant said, *"I was surprised by how different students were from each other. Some were quick to understand, while others needed more time and help."* This realization shifted their perspectives on teaching, prompting them to reflect on the importance of differentiation in instruction.

Additionally, the pre-service teachers highlighted that their practicum experience helped them better understand the teaching profession as a whole. They began to see teaching

not only as the delivery of content but also as a multifaceted role that includes mentorship, counseling, and emotional support. One teacher expressed, *"I never thought that being a teacher would involve so many other roles. You are not just teaching English, but you're also someone they can talk to, someone who listens."* This insight reinforced their appreciation for the complexities of teaching.

Finally, many pre-service teachers saw the practicum as a learning opportunity, where they could make mistakes and improve. They valued the real-life experience of interacting with students and navigating the dynamics of a classroom. A teacher noted, *"I learned more from the mistakes I made during the practicum than from anything else. It was a chance to grow."* This positive outlook on the practicum indicated that, despite the challenges, the experience was viewed as essential in shaping their future careers as educators.

2. Challenges Faced by Pre-service Teachers During Their Practicum

Classroom management stood out as the most prominent challenge for the pre-service teachers during their practicum. Many struggled to maintain order and discipline, especially when dealing with large groups of students. One participant shared, *"Sometimes, I felt like I was losing control of the class. It was hard to get everyone to focus, especially when some students were being disruptive."* This struggle was common among the pre-service teachers, many of whom felt unprepared for the reality of managing diverse behaviors in a classroom setting.

Another significant challenge was adapting lesson plans to accommodate varying levels of English proficiency among students. The pre-service teachers reported difficulties in balancing the needs of both advanced and struggling students. One teacher commented, *"I found it really hard to make sure all the students could follow the lesson. Some were very quick, while others needed more time, and I didn't know how to handle that properly."* This issue highlighted the complexity of teaching in a classroom where students' abilities and motivations vary widely.

In addition to classroom management and lesson adaptation, pre-service teachers encountered difficulties in building rapport with students. Many of them struggled to establish a connection with students, especially those who were unmotivated or disengaged. One participant expressed, *"I tried my best to connect with the students, but some just didn't seem interested. It made it hard to keep them involved in the lesson."* This challenge of building relationships with students was an unexpected hurdle for many, affecting their overall teaching experience.

Furthermore, several pre-service teachers pointed out the lack of sufficient mentoring and feedback from their supervising teachers. They felt that they were left to figure things out on their own, which added to their stress. One pre-service teacher noted, *"I was hoping for more guidance from my mentor, but sometimes I didn't get enough feedback on what I was doing right or wrong."* This absence of consistent mentorship

was a common concern and emphasized the need for more structured support during the practicum.

Lastly, time management was another challenge frequently mentioned by the pre-service teachers. They found it difficult to balance lesson planning, teaching, and other administrative tasks. One participant remarked, *“There was so much to do, and I often felt overwhelmed by the amount of preparation required for each lesson.”* The challenge of time management, coupled with the other issues they faced, contributed to the overall pressure of the teaching practicum.

3. Benefits of Teaching Practicum for Pre-service Teachers

Despite the challenges, all pre-service teachers agreed that the teaching practicum was an invaluable experience that contributed significantly to their professional growth. One of the primary benefits was the development of their teaching confidence. Many reported that, by the end of the practicum, they felt more self-assured in their ability to manage a classroom and deliver lessons. One teacher shared, *“I was nervous at the beginning, but as the weeks went by, I became more confident. I knew what to expect and how to handle different situations.”*

The practicum also provided the pre-service teachers with practical experience in lesson planning and execution. They learned how to create lessons that were both engaging and aligned with the curriculum. One participant remarked, *“Before the practicum, I had no idea how to design a lesson that would work in a real classroom. Now I feel like I have the tools to plan lessons that students can understand and enjoy.”* This experience allowed them to apply theoretical knowledge in a practical context, improving their instructional skills.

Another benefit of the teaching practicum was the opportunity to reflect on their teaching methods and make improvements. The pre-service teachers appreciated the chance to evaluate their performance and receive feedback, even if it was limited. One teacher mentioned, *“I realized that some of my teaching methods didn’t work as well as I thought, so I made changes along the way. It was a valuable learning process.”* This reflection process was essential in helping them refine their teaching strategies and adapt to the needs of their students.

The practicum also allowed pre-service teachers to develop stronger relationships with both students and mentor teachers. Although some faced challenges in building rapport, others found that these relationships enriched their teaching experience. One participant said, *“Once I got to know my students better, teaching became easier. I understood what motivated them, and it helped me create more effective lessons.”* These connections not only enhanced their teaching but also provided them with insights into the social and emotional aspects of student-teacher interactions.

Lastly, the practicum gave pre-service teachers a clearer sense of their future career paths. Many expressed that the experience confirmed their desire to become teachers, while others noted that it helped them identify areas where they needed further

development. One participant reflected, *“The practicum showed me what I’m good at and what I need to improve. It made me more determined to continue learning and growing as a teacher.”* This sense of clarity about their professional goals was a key outcome of the practicum experience.

The findings of this study provide insights into the experiences of pre-service English teachers during their teaching practicum, specifically within the context of Senior High Schools in Central Lampung, Indonesia. The results align with previous studies that emphasize the teaching practicum as a critical component of teacher education programs. Like this study, Richards and Farrell (2011) argued that practical teaching experience is essential for bridging the gap between theory and practice. The pre-service teachers in this study echoed this by acknowledging the practicum as a pivotal opportunity to apply what they learned in real classrooms. However, as highlighted by Farrell (2008), the realities of teaching often diverge from theoretical understanding, particularly regarding classroom management and student engagement. This discrepancy between expectations and reality suggests that teacher preparation programs need to better equip pre-service teachers with strategies for handling real-world teaching challenges.

In terms of challenges, the study’s findings regarding classroom management difficulties are consistent with the work of Klassen & Chiu (2010), who identified classroom management as a primary source of stress for novice teachers. The pre-service teachers in this study struggled to control student behavior, particularly in large, diverse classes. Veenman (1984) similarly found that classroom discipline is a common challenge for beginning teachers. Theories of classroom management, such as those proposed by Jones (2007), suggest that effective classroom control requires a combination of clear expectations, consistent routines, and strong teacher-student relationships. The pre-service teachers’ struggle to adapt their lesson plans to different student needs also resonates with Tomlinson’s (2014) theory of differentiated instruction, which emphasizes the importance of adjusting teaching strategies to accommodate students’ diverse learning levels. These findings suggest that teacher education programs should integrate more hands-on training in classroom management and differentiation techniques to better prepare pre-service teachers.

The benefits of the teaching practicum identified in this study align with Lave and Lave & Wenger’s (1991) theory of situated learning, which suggests that learning is a process of participation in real-life contexts. The pre-service teachers reported that the practicum gave them practical experience that boosted their confidence and deepened their understanding of teaching. This is consistent with findings by Zeichner (2010), who highlighted that teaching practicums are instrumental in building novice teachers’ confidence and competence. Additionally, the development of reflective practices, as highlighted by Dewey (1933), was evident in the pre-service teachers’ reflections on their teaching methods. They recognized the importance of reflecting on their own experiences and adjusting their strategies accordingly, which is a critical aspect of professional growth.

The implications of this study are significant for both teacher education programs and future teachers. First, the findings highlight the need for stronger mentorship during the practicum. The pre-service teachers felt that they did not receive sufficient guidance from their mentor teachers, which is in line with studies by Hudson (2010) that emphasize the importance of mentor support in the professional development of pre-service teachers. Without regular feedback, pre-service teachers may struggle to identify areas for improvement and feel isolated in their teaching challenges. Therefore, teacher education programs should provide more structured mentorship models to ensure that pre-service teachers receive consistent, constructive feedback.

Despite its valuable contributions, this study has several limitations. First, the sample size was relatively small, with only 15 pre-service teachers from one region in Central Lampung, which may limit the generalizability of the findings. Additionally, the study relied primarily on self-reported data from interviews, which may be subject to bias as participants may not have fully disclosed their challenges or overemphasized certain aspects of their experiences. Future research could benefit from incorporating classroom observations or a larger, more diverse sample to capture a broader range of perspectives. Additionally, longitudinal studies could track pre-service teachers after their practicum to examine how their experiences influence their long-term professional development.

Conclusion

This study sheds light on the experiences of 15 pre-service English teachers during their teaching practicum at Senior High Schools in Central Lampung. The findings highlight the critical role of the practicum in bridging the gap between theory and practice, confirming its value in teacher education. The pre-service teachers viewed the practicum as an essential learning experience, despite the challenges they faced. Classroom management, adapting lesson plans to diverse student needs, and limited mentorship emerged as key difficulties. However, the practicum also significantly contributed to their professional growth, boosting their confidence and improving their teaching strategies through reflection and hands-on practice. These insights align with existing research on the importance of practical teaching experiences in shaping competent teachers.

The implications of this study point to the need for teacher education programs to strengthen classroom management training, differentiated instruction techniques, and mentor support during practicums. Ensuring that pre-service teachers are better equipped to handle real classroom dynamics will enhance their overall readiness for the teaching profession. Additionally, structured and consistent mentorship is crucial in guiding pre-service teachers through their challenges and fostering reflective practices. This study highlights the importance of creating comprehensive practicum programs that offer both practical experience and ongoing support to prepare future teachers for the complexities of the classroom.
