PREFACE

The proceedings of International Conference entitled **Promoting Digital Learning and Research Collaboration on Language, Linguistics and Literature** is intended to provide an output of International Conference on Language, Linguistics, Literature and Education (ICLLLE) 2021 held by Universitas Teknokrat Indonesia in collaboration with Lembaga Layanan Pendidikan Tinggi Wilayah II (LLDIKTI). This proceedings covers 25 articles on language, linguistics and literature issue focusing on innovation in language and culture amid Covid-19 pandemic, language and media, language and gender, information professionals in disruptive era, and cross cultural awareness. This Proceedings may provide result of research on language, linguistics and literature as well as challenges, opportunities and practical solutions.

In completing this proceedings, the editors also want to acknowledge with gratitude to Rector of Universitas Teknokrat Indonesia, The Chairman of LLDIKTI Region II, and the Committee of ICLLLE 2021 for the endless support. Finally, it is expected that this proceedings could motivate researchers to write and share their result of research. Hopefully, this proceedings brings benefits for readers.

The Meaning Contained in The Proverb “Dog”: A Material Language Learning

Juanda¹

juanda@email.unikom.ac.id¹

Universitas Komputer Indonesia¹

Abstract

This article aims to get an overview of the moral message in the proverb that uses the word "dog". The data source used was twelve Indonesian proverbs. The method used is descriptive method by examining proverbs associated with elements of moral education. The findings showed that the proverbs discussed in this article contained moral teachings that could be used as a student character education tool. One example of the proverb "like a dog gets a carcass" means that a very greedy person can easily get objects. In this proverb teaches moral education not to be greedy. Usually the impact of this greed will have an impact on the perpetrator who does the negative thing in the proverb. The expected impact of this study is that language learning can contribute to character education for students. Therefore, language education is not only limited to the delivery of material, but must have a meaning that indirectly provides a positive attitude change for students. This is because the language and characters are highly correlated. Therefore, moral content in language and culture learning must be able to make a positive contribution to educational goals, namely maturing attitudes and changing character. The exploration of the moral system in a proverb can be used as a continuous learning material, meaning that the content of the material presented must be sustainable with educational elements, namely cognitive, affective, and psychomotor.

Keywords: proverbs, character, morals.

Introduction

Proverb is a simple or short sentence that is usually used to illustrate something or real truth that aims to educate through aphorisms. Proverbs will usually guide and educate us to behave according to the rules that apply to certain societies. Proverbs are advice which is a group of words or sentences that state the intent, condition of a person, or things that reveal actions, behaviors or things about someone. Proverbs can also be interpreted as expressions that are not direct, but implied to convey something that can be understood by the reader or listener. In another sense, proverbs are fragments of sentences that have frozen their form, meaning and function in society.

Proverbs can be used as educational tools because they contain moral values that can be used as life guidelines for certain groups. Proverbs have the following characteristics. The words in the proverbs have a fixed structure, meaning that the words in the proverbs are fixed and cannot be changed. Proverbs are usually used to satirize or also beautify language. Proverbs use words that are regular, pleasant to hear, and have meaning. Proverbs are usually created based on very careful views and comparisons of nature and events that occur and occur in society. Proverbs are formed with good linguistic ties so that proverbs will stick in the mouths of the community for generations.

The following are types of proverbs in Indonesian. Bidal is a type of proverb that contains good expressions, such as satire, ridicule, and warning, for example, being ashamed to ask a question astray on the road. A proverb is one type of proverb that contains teachings or advice, for example, let it be slow as long as it is safe. A parable is a type of proverb that contains words that express a person's state or behavior through comparisons with the surrounding environment and usually begins with the word "like" for example, like a tiger hiding its claws. An expression is a figurative sentence about a person's condition or behavior which is expressed in a few words, for example a big head. Imagery is a figurative sentence that often uses words like the aim of comparing things, for example "*tua-tua keladi, makin tua makin jadi*". A motto is a collection of words, sentences, or phrases that are used as guidelines, for example diligent base smart.

Theory and Method

The research method used is descriptive qualitative. Descriptive research is research that describes the activities carried out on certain objects clearly and systematically ^[7]. The steps taken in this research include: collecting the theory of proverbs; grouping the types of proverbs; selection of proverbs containing the word "dog"; analysis of meaning in proverbs containing the word "dog". The objects used in this study are twelve proverbs containing the word "dog".

Results And Discussion

Proverbs are usually short sentences known to the general public that contain truth, wisdom and tradition which are conveyed metaphorically. The form of proverbs that are easy to remember and their contents in the form of life experiences make them easily popular and become a practical means of expression through language. The characteristics of proverbs are fixed and stable sentences, have easy-to-remember forms, are popular among the public, their content tends to be in the form of teaching life experiences and usually illustrates something through parables. Proverbs usually consist of several words or sentences and have their own idiomatic meaning. The following is the moral message contained in the proverb containing the word "dog".

The functions of language education include integrative functions, instrumental functions, cultural functions, and reasoning functions ^[6]. This educational function is based more on the purpose of using language related to the attitude and approach of teachers in education ^[2]. The analysis of moral messages in this proverb tries to apply the function of language education as a function of reasoning. The reasoning function emphasizes the use of language as a thinking tool and creates a concept to develop reasoning.

a. "Dogs are fed rice, when they are full" means that there is no point in adding good to a bad person.

This proverb contains satirical language for people who never change their nature even though they have been given kindness. This proverb teaches someone to turn into a good person when someone else does good to him. Maybe many people are tired of treating him well and never repaying him with a crime, but that person still does evil.

b. "The dog is patted on the tail" means that people who are not virtuous when respected are even arrogant.

This proverb teaches us that when others respect us, we should also respect others. Bad behavior when other people respect us makes us still arrogant. In fact, when we respect others, we are also respecting ourselves.

c. "Brave pig ferocious dog" means equally brave

This proverb gives us an idea that a group that is a bit weak if treated harshly will appear courageous. This proverb teaches that we should not treat the weak as they want because he will fight with his strength. In this proverb depicted a dog is stronger than a pig. When the dog behaves fiercely, the pig will appear the courage to fight

d. "Even if the dog is hit, he will repeat himself to a place with a lot of bones" meaning that bad people will definitely repeat their crimes even though they often get punishment.

This proverb gives more satire to people who never realize their mistakes even though they have been punished. Usually people who do evil tend to want to repeat the crime because it has become a habit.

e. "Like a dog with six children" means a person who is greedy.

This proverb describes the nature of a greedy person. Greedy people are not good manners. Therefore, greed must be avoided because it will have a negative impact on our lives.

f. "like dogs fighting over bones" means people who like to fight over other people's property.

This proverb likens bad behavior to want to own other people's property. There are many incidents in society where human behavior fights over other people's property to become theirs.

g. "Like a dog gets a carcass" means a very greedy person easily gets things.

This proverb illustrates that greedy people are always looking for bad sense to make things easier for them to become theirs. He doesn't want to leave things for other people. The ultimate goal is that all things should belong to him regardless of others.

h. "like a dog with a cat" means never getting along.

This proverb describes human behavior that is never compatible with others. His life is always hostile to others and always fighting. This behavior should be avoided because this attitude will foster a selfish attitude for certain individuals.

i. "like a rotten-headed dog" means that if it was known his crime wherever he went he would be insulted by people.

This Proverb teaches us that we must be careful in our actions because once we commit a crime, the crime will be immediately recognized by people, thus making our activities narrower.

j. "like a dog barking at the bone" people who try to seize other people's property.

This proverb is the same as the number f proverb. This proverb teaches us to take what we have. We must not take other people's rights to be ours.

k. "like a dog with a roasted tail" means people who are in trouble asking for help here and there.

This proverb describes a condition when someone is in trouble, he will go without a clear purpose to ask for help in overcoming the difficulties he is experiencing. This proverb

describes a person's unstable condition when experiencing difficulties so that it has an impact on the nature of lack of confidence.

1. "When a thousand dogs bark, can mountains fall" means that the words of the little people will not affect the big people.

This proverb teaches that there is a gap between the upper and lower groups. The higher a person's position is, the more respected he will be. The lower the condition of a person, the less respected his opinion. The majority group dominates the minority group. This shows that minority groups do not have the power to express their aspirations because they are pressured by the ruling group. This proverb gives a satire to the ruling group for their indifference to the lower group.

Conclusions and Suggestions

Language has cultural, social, individual, and educational functions ^{[1], [5]}. One of the functions of language as education is the function of reasoning. This reasoning function can explore a language that can create children's creative thinking ^{[3], [6]}. Even when the proverb is discussed, each of its meanings will be able to explore students' reasoning such as the discovery of the moral messages contained in the proverb.

This proverb material can be used for primary and secondary education students in proverbs lessons. Teachers can give advice indirectly through proverb. Proverbs can teach students to behave well in everyday life. Proverbs can teach children to be confident in the abilities possessed by one small example when students take an exam, they must prepare themselves during the exam not to be "like a dog with a roasted tail", confused because they have not studied the material well.

Teachers can be wiser in conveying the meaning in the proverb. The exploration of the meaning of the proverb which contains the word "dog" can be seen from two points of view. The first point of view is the subject and the second is the object. The two points of view can be taken from the moral teachings they contain. The moral values are expected to have an impact on the cognitive, affective, and psychomotor domains of students.

A Descriptive Study of Matriculation Program: Students' Responses of Youtube Video As Supplementary Material

Desy Awal Mar'an¹

tugasdesy90@gmail.com¹

Islamic Institute of Metro¹

Abstract

Matriculation program is a program for first year students. In normal condition, it provides face to face learning and material for students to have good introduction about English for daily life and in oral communication, but after pandemic era the program had to be done via online and the focus was changed to be preparing students to have TOEFL Test. In this program, the language center did not only provide instructor to deliver material to the students, but they also provided video on Youtube as supplementary material. This is a descriptive study. The sample of this study are matriculation program students. The aims of this study are: 1) To describe the process of matriculation program, 2) To obtain students' responses about the use of video in Youtube as supplementary material in matriculation program. Interview and documentation were the data collection techniques of this study. The results of this study are: 1) Matriculation program was run using Zoom or Google meet for fourteen meetings and sixty minutes in each meeting. 2) Students thought that the Youtube videos uploaded by language center helped them to remind the material delivered by the instructor, 3) Students suggested that the video should be more creative, add Bahasa Indonesia and more detail explanation.

Keywords: matriculation program, Youtube video, students' responses

Introduction

Matriculation program is a compulsory program for the first year students. In the end of this program, they will get a certificate that is as a requirement to register their undergraduate thesis exam. They were grouped by their major to be one class to make easier in delivering material because of their background similarity. In this program, in normal condition, the students had face to face learning. Face to face learning or offline learning is traditional professional learning approach that provides an interaction and intimacy among teacher and learners (Sankar & S. Sankar, 2010)

The students obtained a handbook containing materials that learned with the instructor. The instructor taught each class for two hours in each meeting for seven times. The material was basic English that focused on students' speaking performance. In learning process, students could meet and communicate to other students and instructor directly so that they were more active. Because the students practiced their speaking performance, the classrooms were usually noisy.

Pandemic era brought many effects for all fields in the world. It also affected educational system in delivering material to students in Indonesia. Almost all educational institution provided online learning to their students. This also influenced the process of matriculation program. This program was changed from offline to online learning or e-learning. E-learning is a learning concept which uses a web that is connected using the internet or intranet that links teachers and students (Abou El-Seoud et al, 2014). The students and instructor had communication using internet. In addition, Nguyen (2015) said that if the education was using the internet network, both web-based concepts or face to face meetings,

by utilizing existing technology then it can be said as online learning. The program utilized certain application or platform to support learning process.

The different way of learning from offline to online resulted different policy by language center. This program changed the learning resources. The handbook arranged by language center focusing on basic English and conversation changed to be TOEFL book by Longman. This is because learning TOEFL is also beneficial for students to prepare them to have test. Besides that, language center also provided learning video explaining material on Youtube. The students had to access the video before joining the meeting. The videos vary based on the different topics. They became crucial things in learning process because they connected students' knowledge to the material that would be given by the instructor in learning process. Because of its necessity, the researcher assumed that it is important to investigate students' responses to those videos. After understanding students' thoughts about the videos, language center can improve the creativity and quality of video to be better.

Theory and Method

Learning resources are all sources of various information used to help and facilitate students in increasing their understanding and optimizing learning outcomes (Sanjaya, 2010). In addition, Abdullah (2012) stated that learning resources are instruments used to overcome problems in learning process that optimizes learning outcomes, so learning resources becomes crucial matter to be developed and managed systemically in terms of its functions and quality. Based on the definition above it can be concluded that learning sources are all informations and instruments to facilitate students to achieve learning targets and optimize learning outcomes. The accessibility of learning resources is very important for students' learning process to master the knowledge being learned. One of learning sources can be form video on Youtube.

Youtube, powerful learning media, can be accessed by viewers all over the world and becomes a source of learning videos that has diverse collection (Wirahyuni, 2019). It contains various kinds and fields of videos. Youtube has become one of the most-famous websites in the world (Alexa, 2011 in Al Murashi) Not only contains entertainment, but this platform also provides educational information needed by the students. Seilstad (2012) showed that using YouTube videos in teaching becomes simple strategy to provide specific and relevant material. Beside that Bonk (2009) stated YouTube is believed as an fascinating social medium that contributes to global education. The use of YouTube to teach English increased significantly (Duffy 2008). The fun and fast access of instruction, culture-based videos, and languages from all over the world are offered by it (Terantino 2011). In other words, Youtube videos as learning resources can be beneficial for instructor in delivering material.

This is a descriptive study that collecting the data through observation and interviews to selected students. The research needs sample to be studied. The sample is something that is used as a representation of a study and as a form of generalizing a research result (Flick, 2009) The sample of this study are fifty students of the first year college students of a university in Lampung. The researcher interviewed the sample about Youtube videos implemented as learning sources. Then the data collected and analyzed descriptively.

Findings and Discussion

Learning resources are instruments used to overcome problems in learning process that optimizes learning outcomes, so learning resources becomes crucial matter to be developed and managed systemically in terms of its functions and quality (Abdullah, 2012). In online learning, the language center choosed TOEFL book by Longman as a learning resources. The topic materials were choosed and arranged to be taught for two semesters. They asked the instructors to prepare and modify material to be delivered to the students. They also provided learning videos on Youtube to support instructor's explanation. The students had to watch the learning video first before joining the learning process. After watching video uploaded on Youtube, the students got general description about material would be given. This background knowledge linked to the information transferred by the instructor. It can be signed by students' activeness in answering instructors's questions as brainstorming activities.

Online learning of matriculation program held through Zoom or Google Meet. The instructor and students could choose between them as learning application. In one semester they had fourteen meetings for an hour in each session. The learning activities usually were opened by the instructor by linking the previous topic to the current material. They explained the material while the students listened the explanation. In the end of explanation, it would be given the sample of question of each topic, and they discussed the tips and tricks to answer the questions. The students also were allowed to show their comprehension of the topic by answering the questions.

Youtube as a well-known medium is often watched by students. They can access entertainment or look for the information that they need on it. Based on the interview result, the students seldom access Youtube video in English. They tend to choose video in Bahasa or use subtitle in Bahasa. After joining matriculation program, they had to access and watch English videos talking about TOEFL on Youtube.

The students admitted that the content of matriculation videos were quite interesting. They also said that the content of videos was able to be understood, although they sometimes found difficulties in acquiring the meaning. To solve this problem, they usually asked to the instructor in learning process.

The presence of videos helped them in understanding material and they can watch them when they missed the information given by the instructor. This aspect can decrease students' misunderstanding about the topic so that students agree that Youtube video should be provided to help students in learning.

In answering the question about the weaknesses of matriculation videos in Youtube, they admitted that actually the videos helped them to understand the material although the explanation is too fast, so they found difficuties in listening and comprehending the meaning.

When the students were asked about the suggestions for the videos, they thought that the videos should be mixed in English and Bahasa Indonesia to make them easier in understanding the material given. They also felt that the explanation in the videos is too fast. They hoped that after explanation, the videos provides example of questions and the way to answer and analyze the questions. They also proposed that the video can be added by more creative animation to grab students' attention. Finally, they hoped that the videos will be more interesting and better than before by improving the creativity in producing videos and adding sample questions and Bahasa Indonesia in the explanation.

This study investigates how students respond toward the utilization of Youtube videos as supplementary materials in matriculation program. After analyzing the result of interviews, Youtube can be beneficial as learning source. It deals with Almurashi (2016) who states that Youtube in English classes can have important role. Youtube videos can help students in learning. It can improve students understanding and comprehension and elicit information

(Almurashi, 2016). Students can memorize lessons and make it easier for them by watching Youtube videos (Syafiq et al, 2021). It also provides interesting way to deliver material. Moghavvemi, Sulaiman, Jafaar and Kasem (2018) similarly argue that YouTube offers plenty of attractive learning resources to students. Because of that the students are able to improve their comprehension through meaningful and fun activities.

Conclusion

To sum up, this study found that the videos on Youtube can help students in mastering material given by the instructor. Students can access the video to remind their missed knowledge. Because of its benefits, teachers and instructors can create creative Youtube videos and utilize them as learning resources. This way hopefully can cause students more interested in learning process. This study only focus on students' responses toward the use of Youtube videos as supplementary material without analyzing other aspects such as students' autonomy in online learning. The further study hopefully is challenged to investigate broader area with larger sample size.

Astrolinguistics: Tarology And Astrology As A Language

Merve Gülhan¹, Merve Sude Tanın²

mervegulhaan@gmail.com¹, mervesudetanin.34@gmail.com²

Necmettin Erbakan University, Linguistics Department, Konya/TURKEY^{1,2}

Abstract

Language is not only the transformation of individual sounds into symbols, but also everything meaningful that can be expressed. Linguistics, on the other hand, is the study of languages in an academic way by considering every meaningful element that can be expressed in a scientific dimension. Astrolinguistics is a discipline of linguistics, which was created on the basis of Chomsky's "Universal Grammar" theory, and tries to reveal new languages as a universal and interstellar communication model. In this study, whether a symbolic language can be created on a universal scope in the light of Astrolinguistics through the interpretation of the symbols belonging to the science of Tarology was investigated. Within that aim, the difference in the meaning of the Tarot cards due to the gender symbols on them, the change in the concept of the cards resulting from the gender of the interpreter, and the relationship between Tarot cards and Astrology were examined. The large antennas set up to collect the messages transmitted by the extraterrestrials that emerge in the CETI-SETI¹ studies conducted by NASA are intended to lead an interstellar communication system. In this study, we argue that it is possible to bring the science of Tarology to a universal and interstellar communication system, and the necessary data and symbols, text, etc. in the universe. We have advocated the idea that everything that can be read and interpreted in the form of can be dealt with on a universal scale.

Keywords: *Astrolinguistics, astrology, metaphor, tarology, universal language.*

Introduction

What Is The Astrolinguistics?

Normally, in natural language systems, we can directly access the semantic and syntactic structure, while the situation is different in interstellar communication systems called LINCOS² because we use natural language to explain these linguistic structures. At the same time, since these are natural representation products, they also contain message content depending on the interpretation of the person. The situation is different in LINCOS. There are two levels. The first is the natural language-defined text level, and the second is the meta-level, which is formally annotated. It is used in linear representation at all levels. This is literally important given the transmissibility of messages at the interstellar level. Message contents examined in this system do not need certain grammar structures on account of the fact that there is no natural language criterion. At this point, interstellar level messages are admitted by Astrolinguistics and these messages can be attempted to reach to a condition of universal language level.

Tarology As A Language

Calling Tarot as a language would not be a metaphor or assimilation which is a symbolic language, although it has limited data; moreover, everything that can be read is text for linguists so Tarot cards have symbols that can be read. It progresses with the combination of certain meanings and symbols. There is almost any systematic grammar and syntactic code as in natural languages, in that they get a syntax structure by the individuals the way of subconsciously. In tarot readings, metacognitive elements and symbols create a receiver-reference relationship through linguistic data, just like a text. This leads us to the function of simultaneously receiving data both the receiver and the interpreter of the perception by linguistics way.

While interpreting the tarot cards, the background information acquired on the psychic or experiential level is in the foreground and the "terra incognita" (undiscovered area)³ region of the mind becomes active. In some cases, there are contradictions in the interpretations the reason why one of the parties in the receiver-referencer relationship is psycho-behaviorally unhealthy. Most of the time, when it comes to these problems, individuals' use of psychotherapy and drugs can affect right linguistic transfer and reception.

After all, the purpose of emergence Tarot in the past was to train people in memory. In this training, the memory points (ars memoria and ars memorativa)⁴ in the mind were accessed and the symbolics were read and transferred with the help of natural language, just like the text. Later, it developed and brought individual elements, imaginary mediators or instrumental images one step closer to the abstract world. Today, Tarot is attributed as "science" because of abstract reality.

Astrology as A Language

In the absence of technology, when the sky and the signs in the sky were clearly visible, people were more interested in the sky. They determined their vital events and daily works with the signs. According to the astrological and meteorological signs, they formed the arrival of the seasons, the harvest and sowing times. Moving this forward, our ancestors moved on to the first asterisk reading stage.

From the beginning, astrology has been more than a popular contemporary view. However, it was tried to be kept secret despite the development of astrology, for many years. As the developing astrology offered people signs that they did not know, these signs brought people to positions where they would behave like God. This led to the power base behavior of humanity. For this reason, it was kept confidential, it was used only by experts in this field, and training was given to people with suitable qualifications.

Astrology, which used to be of great importance, is now dismissed by certain segments. It was claimed not to provide any evidence or concrete reality but astrology, which affected people's lives so much in ancient times, is not given as a lesson in any school, nowadays. There are certain places where lessons are offered, but they are private and paid. The only thing left in the 21st century that is the language of Astrology. Astrologers know the positioning of the Zodiac signs with the rotation of the sun and earth, but the language of astrology remains confidential today.

⁴ Hatcher B. (2020) "Tarot as a Counseling Language: Core Meaning of The Cards", Bradford Hatcher.

Theory and Method

In this study, in the context of Astrolinguistics, the branches of Astrology and Tarology were examined as languages and the related literature was reviewed accordingly. Considering the limitations of time and place, in the light of the information examined, the ancient informations to have been reached from ancient times to today and the studies carried out in this field are limited as linguistics data. In this context, “CETI-SETI” satellite messages carried out by NASA, Ann R. and Amberstone W. (2008) “The Secret Language of Tarot”, Gillet R. (2011) “The Secret Language of Astrology”, Ollongren A. (2013) “Astrolinguistics”, Vakoch D.A.(ed.) (2014) “Archeology Anthropology and Interstellar Communication”, Hatcher B. (2020) “Tarot as a Counseling Language: Core Meaning of The Cards” studies were examined with descriptive research method and various theories and data sets were reached. Additionally, the main elements of the theme, “Classic Rider Waite” and “Universal Tarot” tarot decks, “Sword, wand, pentacles and cup” arcana minor cards, “king and queen” gender variables were analysed.

The reason why this study is limited to the basics of Astrology and Tarology on the axis of Astrolinguistics is that the extensive scope of the research area required the output of the wide range of symbolic data in a comprehensible way.

Findings and Discussion

Language Data Extracted From Planet Movements in Astrology

In astrology, symbols are association elements. Just as the speakers of natural languages express the data, astrology, although it does not have a natural language content, is brought to the status of language by the astrologers through these symbols with the analogy technique.

It creates linguistics sets in language, which is one of the natural elements of astrology. Planets, signs, houses and aspects are required when it comes to these elements. These combinations are the reflection of astrology as a language of noun, adjective, verb and adverb phrases as in natural languages.

These symbolic and connotational elements in astrology are interrelated. As these elements are interpreted and make sense, they have linguistic features. As in natural languages, a language needs a language speaker to make sense. This is the language of astrology.

The Mystery of Tarot Cards? Is There An Universal Language on Tarot Cards?

Tarot is an ancient language of oracle. Until the 18th and 19th centuries, Tarot was one of the ancient methods of divination. However, in the 18th and 19th centuries, Tarot's relationship with teachings such as Egyptian mysteries, Hermetic philosophy, Kabbalah and Alchemy emerged.

Today, it is known that Tarot is a multi-disciplinary field. It is also generally associated with fields such as astrology, numerology, Kabbalah, I-ching, and psychology.

The real power of Tarot comes from combining the universal with the personal. Each card can be treated from our own perspective, but we can be influenced by comments made by others when it makes sense to us. Accordingly, the symbols on the Tarot cards are closely related to Occultism which can be stated as “secret science”. Occultism contains

metaphysical subjects such as astrology, alchemy, magic and spirit. Although the information about these occult fields is included in the Tarot cards, the secret of the divination determinations in the Tarot has not been discovered yet. Thus it may be said that Tarot is actually a universal language that reflects a hidden awareness - acting as a mirror.

Gender Differences On Tarot Cards

Tarot cards have gender differences. These differences were researched through the semiotics and gender stereotypes on the cards.

Figure 1. King of Swords Card

From these images, the "King of Swords" cards were taken out of the Classic Tarot deck on the left and the "King of Swords" cards taken from the Universal Tarot deck on the right.

First of all, to be semiotic, there is a king sitting on his throne with a stern facial expression in these cards, taking a pillar behind him. The king raises the sword in his hand. The crown on his head and the weight and color of his clothes represent the male aspect. Gender stereotypes attributed to the King of Swords are "Male, judge, power, command, charisma, order, decision." and the other dedicated is "In love with power".

Figure 2. Queen of Swords Card

From these images, on the left are the "Queen of Swords" from the Classic Tarot deck, and on the right are the "Queen of Swords" from the Universal Tarot deck.

To be semiotic, these cards show a queen sitting on a high throne. She holds the sword in her hand firmly and upright, defiantly to those around her. Here, the femininity of the queen is in the foreground. The Queen's posture demonstrates intellect, alertness, freedom, creative power and perceptiveness. In parallel with her calm and firm stance, blue and white tones were used predominantly in the theme and in her clothes. Gender stereotypes attributed to the Queen of Swords are "Widow, crying, grieving, sterility, power, and cruelty." In response to these, the other is stated as "Anger, wall, condition".

Figure 3. King of Chalices Card

From these images, the "King of Chalices" cards were taken out of the Classic Tarot deck on the left and the " King of Chalices " cards were taken out of the Universal Tarot deck on the right.

Primarily , when we examine it semiologically, the King Chalices, symbolizing masculine power, sits on his throne over a turbulent sea. He has a royal scepter in one hand and a cup in the other. In the background, a distant ship is seen with a fish in the sea; furthermore, he has a golden cloak and crown representing his power with his blue outfit and calm stance. Gender stereotypes attributed to the King of Chalices are stated as “Protector of science and arts, guardian, moral, inheritance, blessings and creativity. Contrary to these patterns, it is characterized as "in love with love".

Figure 4. Queen of Chalices Card

From these images, the "Queen of Chalices " cards taken from the Classic Tarot deck on the left and the "Queen of Chalices " cards taken from the Universal Tarot deck on the right.

When we analyze it semiologically, the queen sits on her throne surrounded by water and looks dreamily at the cup in her hand. What distinguishes her from the King of Cup is the absence of a "royal scepter" in her hand. She draws attention with her long elegant white dress, a patterned cloak that shows her femininity, her crown representing wealth and power, and her "Lady" stance attributed to women. The queen is the symbol of femininity, delicacy, heartthrob, supernatural power and sacrifice. Gender stereotypes attributed to the Queen of Cup are attributed to features such as "Female, domineering, loyal, friendly, honest, foresight, suggestion, understanding, endurance". On the contrary, its additional feature is “Emotional”.

Figure 5. King of Pentacles Card

From these images, on the left the "King of Pentacles" cards from the Classic Tarot deck, and on the right the "King of Pentacles" cards from the Universal Tarot deck.

Initially, when we study on it semiotically, a king symbol holding a royal scepter and holding a talisman in the other hand represents masculinity. A castle can be seen behind the king sitting in a flower garden. It draws attention with its red and black tones, which represent nobility and passion, the talisman representing money, and the royal throne and crown, which indicates power. Gender stereotypes attributed to the Pentacle King are attributed to traits such as "Trader, human ambition, value, ingenuity, success, enterprise". In addition to these references, his feature is "In love with his job".

Figure 6. Queen of Pentacles Card

From these images, the "Queen of Pentacles" cards taken from the Classic Tarot deck on the left, and the "Queen of Pentacles" cards taken from the Universal Tarot deck on the right.

First of all, when we examine it semiologically, the queen sits on her throne surrounded by ripe fruits and greenery and contemplates the pentacle in her hand. What distinguishes it from the King of Pentacles is the absence of a "royal scepter" in her hand. The Queen of Pentacles is a symbol of fertility and femininity. She draws attention with her clothes adorned with blue and red tones and her golden crown. Gender stereotypes attributed to the Queen of Pentacles are "Heir, wealth, material security, splendor". Its opposite feature is "Ready to be accepted and deepened".

Figure 7. King of Wands Card

From these images, the "King of Wands" cards taken from the Classic Tarot deck on the left and the "King of Wands" cards taken from the Universal Tarot deck on the right.

In the first stage, when we consider it semiologically, there is a male symbol sitting on his throne holding a royal scepter. While a small salamander is seen on the ground, lions and salamanders decorate the column on which the king leans. Green, blue and red tones accompany the outfits and accessories with a gold cape and crown. While the gender stereotypes attributed to the King of Wands are "Entrepreneurial, honesty, sincerity, experience, being a pioneer", on the other hand, as an additional feature, "In love with his ego".

Figure 8. Queen of Wands Card

From these images, the "Queen of Wands" cards were taken out of the Classic Tarot deck on the left and the "Queen of Wands" cards taken from the Universal Tarot deck on the right.

When we discuss the Queen of Wands semiologically, a crowned queen is holding a staff in her hand. The queen, who is sitting with a proud expression, holds a sunflower symbolizing her power over nature in her left hand, and salamander symbols are seen on the columns. In front of the throne stands a black cat representing the negative aspect of Venus. The Queen of Wands symbolizes self-confidence, independence and feminine gentleness. This softness is intelligence, not adaptability. She expresses vitality with her yellow outfit and passion with her red necklace. Gender stereotypes attributed to the Queen of Wands "Friendly, amiable, charming, dignified." is in the form. In addition, she has the opposite characteristic of "Desirous, willing but obsessive".

Conclusion

Some implications were discussed in the light of the findings examined in the study. On the basis of these discussions, the view of "Astrolinguistics", universality and innatist hypothesis put forward by Chomsky was targeted. The fact that Tarot and Astrology contain traces of data similar to natural languages and mostly contain messages through symbols has contributed to our discovery of the invisible side of the iceberg that contains treasured information in our idea of "Universal language". In this study, the theories, scientific sources, scientists and linguists were examined and the common opinions that constitute the universe of the study were reached.

The obtained data sets have been interpreted to include the general knowledge of Tarot and Astrology, and they also involve both Semiotics and Astrolinguistics sub-fields. Astrolinguistics in general terms tries to explain whether an interstellar communication

system exists or how it might be possible. Tarot and Astrology, on the other hand, is the language of symbolics, which is entirely composed of symbols. As the messages are interpreted, information about the world and extraterrestrial also emerges.

When Tarot and Astrology are considered separately, the inferences obtained from Tarot can be mentioned first. When we critically approach the Classical Tarot and Universal Tarot cards used in the article from a linguist's point of view, variants were encountered. First of all, it is striking that the Classical Tarot cards have a Western influence semiologically, and the Universal Tarot cards have an Eastern breeze. In addition, when the variables in the context of gender are considered, the king is attributed a positive semantic roles as +power, +authority; whereas, the queen is referred a negative semantic roles -power, -authority, +emotional, +loyal, so draws attention with her "Scepter".

Secondly, to refer to Astrology, its houses, signs, aspects and their references form the grammatical structure of Astrology. What distinguishes it from Tarot is that there is no semantic role stereotyping imbalance between the genders. There are situations in which astrology affects physiologically as well as metaphysically. For example, the body's loss of water during the full moon affects people and nature, just like the seas experience high tide. Together with, due to the lack of the fire element in the sky during the Retro periods, symptoms such as inactivity, energy slowdown and even stagnation are seen in the body.

In summary, the systematics of languages should not be based only on verbs, nouns and adjectives. The reason for this is that the universe has a language or communication system that will not be limited by grammatical elements. The existence of Tarot and Astrology can be shown as the best evidence. In the depths of Tarot and Astrology lies the merging of the universal with the personal through symbolic logic. The secret of the prophetic determinations contained in both has not yet been investigated. We can say that linguistic signs have a single and common reference among interpreters both interplanetary and on earth. This shows that Astrology and Tarot meet the criteria of "Universal language" and "Astrolinguistics".

General Sudirman University^{1,2,3}

Abstract

Language learning not only requires a concept of the nature of language but demands a view of language learners and language teaching materials. Sociolinguistics and ecolinguistics are studies of applied language sciences that can be used as an approach in the Javanese language learning model. Sociolinguistics as an applied linguist in language teaching relates to linguistic phenomena that arise from both internal or external structures in society as well as their contribution to the design of learning devices. Furthermore, through these ecolinguistic parameters, it is described that the language environment is a social environment where language and every living language speaker interact, interrelated and interdependence with fellow interpreters and of course with nature or the environment. Various forms of Banyumas Javanese lingual codes on the 'content' of the environment with the diversity of local resources can be a foothold in the life of Banyumas people as one of the efforts to defend the language. Therefore, it is necessary to promote collaboration between sociolinguistic learning and environmentally based language development models seen from an ecolinguistic perspective. In this case, the diversity and diversity of Banyumas Javanese language that represents biodiversity in certain environments can be an effort to conserve the local language. One example is the concept of learning through a socio-ecolinguistic approach that is expected to respond to the development of the industrial revolution 4.0 and community 5.0 in the learning process in the era of the Covid-19 pandemic. This developed design has the characteristic of focusing on the development of language competencies (language skills) through a communicative approach by paying attention to aspects of socio-cultural diversity. This collaboration of learning through sociolinguistic and ecolinguistic studies aims to understand the interaction of language and its environment. Through lexicons in the environment, it can be used as a reveal of local wisdom for the preservation of language and the environment. The development of learning with the use of the Banyumas Javanese-language echo lexicon is proclaimed to enrich and improve the insight, experience, knowledge, and mastery of environmental materials.

Keywords: Banyumas Javanese Lexicon, Ecolinguistic, Learning Language, Sociolinguistic

Introduction

Since the era of globalization, the use of the Banyumas Javanese language has decreased. Currently, it shows that native speakers rarely use the language in various contexts of language use. The frequent use of a more prestigious language and the lack of space for local languages to develop are some of the factors for the erosion of local languages. Native speakers have more opportunities to use the national or foreign language compared to using the local language. The existence of this sociolinguistic reality can bring challenges in local language teaching classes, where educators must prepare students to face realities outside the classroom and create various creative language learning models (Prabjandee, 2020). The language learning model deals with how language speakers learn their language, how they are often placed in the general learning environment they carry and need, and how language speakers positively and negatively construct local language identities (Seals, 2018).

Through a post-structuralist view, identity has an important role in the development and learning of education regarding the preservation of local languages (Ibda, 2017). The role of the context and the socio-cultural diversity of the Banyumas community can shape the realization of the identity of the *blakasuta* Javanese language (Nurdiyanto & Resticka, 2021). It can be said that the practice of using local languages can indirectly contribute to the formation of positive and negative sociolinguistic identities of the Banyumas community and the construction of their multilingual identity. Evidence of preference in the context of class may influence Banyumas Javanese as marginalized. Therefore, it is necessary to develop a model for developing Banyumas Javanese language learning as an effort to maintain the local language. With the Banyumas Javanese language learning development model, it can be used as a bridge for students to understand more about their language and culture which in turn can affirm their own multicultural identity. This model can create a new paradigm that is specific to pedagogy.

In a pandemic situation in the era of the industrial revolution 4.0, there are various challenges of learning development models. Concerning the socio-cultural aspects of language learning, learners of different ethnicities may face challenges in negotiating their social identities as speakers and learners of the target language. The act of learning the local language is a social practice involved in identity negotiations. Social practice in language defense efforts is important in the language learning model because it serves as a key space for recognizing local knowledge resources (Starr, 2019). Parameters of diversity in ecolinguistics are a source of language richness. The existence of lingual unit forms can represent knowledge about biodiversity in their living environment (Mbetse, 2017). The linguistic situation of the Banyumas people who are bilingual related to language choice shows that they will not switch to accommodate the other person's language if it is different from their choice of language. This shows that the Banyumas people show symbols of their ethnic identity through the practice of the language they use (Nurdiyanto & Resticka, 2021). The current symbolic dominance shows that the local language, in this case, the Banyumas Javanese language, is not officially recognized in institutions, especially in the language teaching sector, so that it has an impact on students' access to mastery of the local language. It is therefore important to understand how community members manage symbolic dominance and how this impacts language speakers.

Sociolinguistic innovations in the field of educational activities, management of educational processes, and content of educational programs are related to cross-cultural problems and social adaptation (Rubtsova, 2019). The problem of social and cultural adaptation of the community is related to language, intercultural communication, and interpersonal relationships. The communicative competence of speech-language communities includes linguistic, sociolinguistic, discursive, and socio-cultural skills. Socio-cultural factors can positively influence the development of intercultural communication that integrates

language knowledge. This practical experience can determine the formation of a sociolinguistic environment that positively integrates language and cultural knowledge (Wei, 2020).

Theory and Method

About the model of language development as an effort to maintain the language, language education is more explicitly related to taste/ethnicity/ethnicity (Starr, 2019). In this regard, environmental conservation efforts are the responsibility of all subjects. Concerning Javanese language subjects, some competencies are specifically related to environmental care, namely, students can appreciate, practice honest behavior, discipline and care in responding to natural and social phenomena. In this regard, mother tongue education policy decisions are often made with sociopolitical objectives, namely by involving the role of formal schools in implementing education through certain languages (Mulyadi, 2015). Knowledge of the 'content' of the environment as content recorded in local languages can be used as learning materials to educate the younger generation, care for, respect, and preserve it.

Qualitative and pedagogical research methods are used as the basis in this study. The qualitative approach implemented within the framework of pedagogical experiments is to express conceptual ideas of productive methods as innovative tools for ecological and sociolinguistic adaptation. The method of implementing activities as an effort to increase the eco-literacy of students and teachers through the development of existing environmental education programs using various creative learning methods (creative learning). In addition, the use of direct experience methods, discussions, and demonstrations, as well as experiments, are expected to make it easier to understand learning materials such as videos, films, games, or direct practice in learning. project-based learning. It is necessary to identify the linguistic reflection of the language-speaking community to find out how children perceive the people and situations around them related to the mastery of local languages regarding environmental knowledge. Interview methods, ethnographic field observations, and qualitative performance measures are expected to be able to show psychological interpretations that this local language is part of them that must be maintained. In the context of language learning, this discursive method is used in classroom situations that place students as actors in maintaining the local language. Through this linguistic reflection, knowledge about language biographies from speakers of the language will be obtained.

Findings and Discussion

Socio-Echolinguistic Approach as a Learning Resource in the Banyumas Javanese Language Learning Model

During a pandemic crisis, the lack of a local language learning model that addresses environmental 'issues' makes local languages even more marginalized. Positioning in a social context is important considering that educators with their learning models and the high enthusiasm of students are expected to support each other in the development and maintenance of language and support their identity as bilingual. Sociolinguistic and ecolinguistic studies are the basis for developing learning models. Linguistic problems related to various languages, language communities, bilingualism, multilingualism, language use (language ethnography), language planning, and its relationship to culture can be used as corpus data in the world of education. However, the success or failure of language learning is related to many aspects, such as educational goals, lesson materials, learning resources, facilities, students, and teachers. Learning a language and teaching a language must be seen

in what context, how is the educational setting, and what is the background for doing language teaching. In the development of language teaching theory, the problem is whether the language is taught and what about its existence in sociolinguistic and ecolinguistic studies. Therefore, a learning model is needed, especially the Banyumas Javanese language by focusing on its position in national education. In addition, it can also be used as learning material for foreign speakers who come to the local area, especially to understand Banyumas culture. One of the materials that will be included in the syllabus is using a socio-ethnolinguistic approach. can also be used as learning material for foreign speakers who come to the local area, especially to understand Banyumas culture. One of the materials that will be included in the syllabus is using a socio-ethnolinguistic approach. can also be used as learning material for foreign speakers who come to the local area, especially to understand Banyumas culture. One of the materials that will be included in the syllabus is using a socio-ethnolinguistic approach.

Ecolinguistic learning tends to be about two things, namely, first, ecology as a metaphor for language in an environment which includes language diversity, language preservation, and extinction. Second, the role of language in solving environmental problems. The Banyumas language community has a variety of unique customs and cultural backgrounds. With language dressing, various forms of lexicon with environmental concepts can be used as learning resources for children. Various special expressions use the Banyumas Javanese language in this ecolinguistic view as an effort to preserve the nature of the Banyumas Javanese language. This is motivated by the fact that language lives in society and daily conversation, speakers often use a lexicon that comes from their environment. In this case, the environment contributes to the lexicon's development of language in society. These lexicons can come from the names of trees/plants, animal names, landscapes, and various other natural phenomena. The realization of the lexicon obtained from the environment in the language used by the community will reflect the closeness of the community to its environment. In connection with this, in everyday conversation, humans realize their speech can be in the form of direct speech or indirect speech, both literal and non-literal. In this regard, ecology as a metaphor, in this case, is the lexicon of animal names used in speech in the Banyumas community as shown in the data below. The environment contributes to the lexicon's development of language in society. These lexicons can come from the names of trees/plants, animal names, landscapes, and various other natural phenomena. The realization of the lexicon obtained from the environment in the language used by the community will reflect the closeness of the community to its environment. used in speech in the Banyumas community as shown in the data below. names of animals, landscapes, and various other natural phenomena. The realization of the lexicon obtained from the environment in the language used by the community will reflect the closeness of the community to its environment. In connection with this, in everyday conversation, humans realize their speech can be in

- (1) *Garanggati* nang wit-witan
Panggih arang nggo impenan
- (2) *Jangkrik* gedhe, dheweke lagi duwe sir karo kowe
- (3) Tumindhake *ngumbang* kara

Lexicon *nggaranggati*, *jangkrik*, and *ngumbang* In the Javanese-speaking community, Banyumas is often spoken in daily communication which is often used in indirect speech strategies which are realized into *parikan*, *wangsalan* and *pepindhan*. *Parikan* (1) which consists of two lines can describe the mood of the speaker who rarely meets the person he worships, this very deep desire to meet is what causes him to often dream of the person he worships. *Parikan* is an indirect way of communicating so that the speaker's longing is conveyed indirectly through his speech. *Wangsalan* (2) is included in the *wangsalan* whose real answer/meaning is in the first part, namely '*jangkrik gedhe*' which is the same as 'sir' which means heart's desire/desire. In this *wangsalan* data, the use of indirect speech is intended by the speaker to protect the person referred to in his speech. The transfer data (3) means that the action is like a beetle. *Pepindhan* is a lingual unit which means equality. The arrangement uses the word like or its synonym or does not use the presupposition word at all. In this case, what is equated is the action or deed. *parikan*, *wangsalan*, and *pepindhan* are often used as teaching materials or learning resources in Javanese language subjects and local content that has local wisdom content. Indirectly, these teaching materials can enrich the repertoire and lexical resilience of the Banyumas Javanese language.

In learning at school, students are required to be able to use sociolinguistic variables, namely linguistic elements with variations in social factors such as register, gender, or race. The various sociolinguistic competencies of learners can facilitate vocabulary mastery. Given, the Banyumas community is a diglossia society where speakers vary their speech with high language and low language and pay attention to context variables and the interlocutor. Sociolinguistic competence is operationalized as the extent to which learners can use various social variations in the context of speech. This is very important in the process of learning local languages. In this regard, learning local languages should take place not only meaning, getting but it's a process of meaning-making so that there will be the internalization of values in the learner. Based on this pattern, students are given a set of rules to be understood cognitively but are directed to the development of affective aspects (values, beliefs, attitudes).

The benchmarks for this affective aspect include: appreciation, satisfaction, desire, interest, motivation and love. With a contextual approach (contextual teaching and learning), which relates the material being taught to the situation or state of the environment. Effectively this can encourage students to ask questions, constructivism, discover, do modeling, and actual assessment. The implementation of this approach is that learners are directly involved in the process of learning local languages. Various environmental lexicon can be implemented in four language skills. For example, in learning to speak, students directly learn to tell the surrounding environment by using local languages, while in learning to write students are invited to write fiction, either short stories or poetry with environmental themes. Furthermore, students are invited to enjoy the natural environment either directly or indirectly through audiovisual, audio recording, and Javanese reading. Introducing various

environmental lexicons that exist around us as learning materials can prove that this appreciative learning pattern can arouse students' interest in learning. In addition, additional activities also need to be encouraged, such as Javanese wall magazines containing student works, literary studios, *karawitan*, and various language and literary competitions as well as regional arts that can support the learning development model. In this era of the industrial revolution 4.0, to package learning so that it is interesting and not boring,

Environmental Conservation by Utilizing Ecolexicon as a Pillar of Banyumas Javanese Language Learning

Learning activities in schools are upstream of strategic human resource development facilities in forming environmentally sound human beings. Based on the results of the study, it shows that the Banyumas Regency government has made various efforts to preserve and maintain the Banyumas Javanese language by making the Banyumas Javanese language a local content curriculum in formal education. In this regard, environment-based language learning is appropriate for scenarios and integration in learning. In this case, eco-literacy is interpreted as a literacy effort that aims to provide the understanding and a critical attitude towards environmental sustainability. Through learning local languages, students are indirectly prepared to be critical, responsive and innovative concerning environmental issues, especially the environment in which he lives. In the 2013 curriculum, Javanese language learning can be designed with the concept of learning using the method project-based learning, case study, or content-based learning. For example, in the method of content-based learning, Students are invited to understand various types of texts and then practice them in various language activities in line with the practice of using Indonesian in everyday life. In this case, the Indonesian language presents the material in the form of texts that can be filled with eco-literate content.

In Javanese language learning, the use of ecolexicon based on a socio- ethnolinguistic approach is placed as a source or teaching material in the learning. By utilizing the ecolexicon, students are expected to be able to apply ecological concepts, understanding how natural systems work and how the relationship between social systems and natural systems is. The implication is that students have a concern for the environment and respect the environment, so that indirectly in their cognitive abilities students can identify environmental problems/issues. The use of the ecolexicon as a learning resource includes local, national, and global potentials. Model Banyumas Javanese language learning with eco-literacy characteristics can be arranged with the concept of observational learning strategies, case study, or project-based learning and designed in learning strategies that construct cognition, affective, pragmatic, psychomotor, creative, and innovative. The following is a design for utilizing the potential of the ecolexicon based on socio-ecolinguistics.

Scope	Description
Local Potential	An introduction to the lexicon of animals and their body parts
	Introduction to the livelihood system
	Introduction to the kinship system
	Introduction of plants, their parts, fruits, and their processed products
	Introduction of the natural environment around the house
	Household waste
	management Water use
	Use of etiquette at home
Global potential	Environmental pollution

	Forest fires
	Introduction to local folklore Damage
	to marine ecosystems
	Water pollution
	Language Variety

Utilization of the potential of the ecolexicon as a source of teaching materials in the 2013 curriculum was developed based on three things, namely language, literature, and literacy. Language refers to knowledge of the Banyumas Javanese language in expressing feelings and exchanging knowledge. Literature learning can develop imaginative competence, while the literacy aspect aims to develop the ability to create texts. These teaching materials are designed to instill awareness of the environment, respect for the environment, and be responsible for environmental conservation. The implementation of eco-literacy in Banyumas Javanese language learning leads to the achievement of students' mentality with environmental insight. Environmental conservation is expected to be carried out by students by providing knowledge about the environment through environmental-themed texts. In this regard, the utilization of the potential of the ecolexicon can be used as the pillars of language learning. The first pillar is to use a scientific approach which is expected to familiarize students with making deductive and inductive reasoning. The second pillar is using a text-based approach, including explanatory text, recount text, exposition text, description text, narrative text, and procedure text. The third pillar is based on character education, in this case, it is hoped that students will have a love for the environment that can give a positive attitude towards the environment and have a caring attitude towards caring for the environment. The first pillar is to use a scientific approach which is expected to familiarize students with making deductive and inductive reasoning. The second pillar is using a text-based approach, including explanatory text, recount text, exposition text, description text, narrative text, and procedure text. The third pillar is based on character education, in this case, it is hoped that students will have a love for the environment that can give a positive attitude towards the environment and have a caring attitude towards caring for the environment.

The end of learning Javanese with the use of this ecolexicon is the ability of students to interpret and produce various texts according to the context. In this case, the teacher as a facilitator hopes that students can produce descriptive texts about objects or events, reports on observations, poems, slogans, letters, advertisements, posters, scientific articles, speeches, short stories, biographies, opinions, editorials, scientific works, and others. It can be said that the use of ecolexicon based on this socio- ethnolinguistic approach, can indirectly instill awareness about environmental conservation.

Conclusion

Banyumas Javanese language learning can be one of the local content subjects at all levels of education, especially those with communicative, educative, and cultural functions. The identification of linguistic reflection in contextual learning can show that the use of local languages can affect the language skills of the Banyumas Javanese-speaking community. The

environmental-themed language learning model can position the speakers and the way the school is to maintain the local language. With the diversity of languages that represent biodiversity in certain environments, it can be a source of writing and efforts to preserve the Banyumas Javanese language.

Lambung Mangkurat University^{1,2}

Abstract

Pragmatics is a study of how language interacts with its social context in the process of communication between a speaker and a listener. There are various aspects of pragmatics, and one of them is dealing with flouting the maxims of conversation. Flouting of maxims consists of flouting the maxim of quantity, flouting the maxim of quality, flouting the maxim of relation, and flouting the maxim of manner. This research aims to examine the flouting of maxims in the movie *The Devil Wears Prada* (2006). The descriptive qualitative method is used in this research. The descriptive method is a method that explains or describes object research through analyzed data. The data of the research is the dialogue between the characters in the film. The results of this study show that there are four types of flouting of maxims found in the dialogue of *The Devil Wears Prada*, and there are 18 data have been analyzed as flouting of maxims. There are data as generalized flouting of maxims: 9 data (50%) as flouting the maxim of quantity, 2 data (11%) as flouting the maxim of quality, 2 data (11%) as flouting the maxim of manner, and 5 data (20%) as flouting the maxim of relation. Therefore, it can be concluded that the flouting maxim of quantity is a dominant flouting the maxim of conversation that appears in the dialog of *The Devil Wears Prada* movie.

Keywords: flouting of maxim, pragmatics, the devil wears prada movie

Introduction

Language has a significant role in communication and is the essential skill that naturally obtains by every human being to fulfill their needs. It is because communication has a crucial part in the social world and cannot be separated from human life. It is also because humans are social beings who cannot live alone, and they usually interact with one another in the form of conversation. Communication is an activity of transmitting information between people using symbols, signs, or general behavior. The purpose of communication is to keep good social interaction among people. In addition, communication happens to show the existence of the humans in its surroundings, and human can establish a social relationship by communicating each other. People cannot imagine what the current situation would be if there is no communication among people. People use language as a medium to communicate with each other. According to Ayesreh and Razali (2018), language is a vehicle to inform and transfer ideas and thoughts through communication. Moreover, Ekah and Akpan (2018) state that a language is an essential tool for communication both in its written and spoken forms. People use language to express their feelings, ideas, emotions, desires, thoughts and share the information in daily life, whether it is in written form or spoken. Language expresses the concept as a tool of communication among the members of society. A language will bring the human into social aspects and have a closer relationship with each other. Therefore, language can be a bridge that allows people to communicate in an everyday situation.

By using language, people can establish the social relationship among them through conversations. By doing conversation, it gives information to others and getting information. A conversation is an activity in which every human being shares information with each other,

and at least two people that are involved in a conversation. Furthermore, a conversation is a turn-taking activity in which each speaker will hopefully take the opportunity to speak, and it will be very complicated to interpret the meaning conveyed if more than one person speaks at the turn. A speaker and a hearer are supposed to exchanges with the needed information that benefits both of them by giving the required information in a conversation, so they can understand each other's utterances. When both the speaker and the hearer can understand the meaning of the utterances in the conversation, it is said to be a successful communication.

However, communication is not always easy as there are various differences among speakers, and it can lead to misunderstandings among the speakers. It is because communication is not only about two people talking, but it is also about how these people that engaged in the conversation can understand each other's utterances and the meaning behind them while they are conversing. Therefore, people should be able to grasp what is being said as well as the topic of the conversation. People need to know the context of what they are communicating in order to avoid misunderstandings in a conversation.

Pragmatics is one of many subfields of linguistics. Pragmatics is the utterances of specific events and the intention of the speaker to the hearer at times and places involving language. Yule (2010), as cited in Nurjannah, Daud, and Fata (2020), defines that pragmatics as a study that focuses on the meaning of utterances in conversation. According to Levinson (1985), as cited in Aristyanti, Sutopo, and Yuliasri (2020), he defines that pragmatics is the study of the relation between language and context that are basic to an account of language understanding. There is a close relationship between an utterance and situations. Therefore, pragmatics is the study of the relevant context or situation, not the language used. Pragmatics consists of several aspects such as context, deixis, reference, anaphora, speech acts, and maxims of conversation. Pragmatics has many aspects; one of them is the cooperative principle.

The cooperative principle was introduced by a philosopher named H. Paul Grice in 1975 (Zebua, Rukmini, and Saleh, 2017). It is also known as Gricean maxims. This principle explains how the speaker and the hearer can be cooperative when they are engaged in the conversation in order to achieve a successful communication. It is the fundamental principle in pragmatics in which people are strived to make the conversation as cooperative as possible. The cooperative principle can be observed in order to maintain the conversation flowing smoothly and harmoniously, as well as to reduce misunderstandings when people are in the process of communication. The cooperative principle ensures that the conversational contribution such as is required, at the stage at which it occurs, by the accepted purpose or direction. In other words, the speakers are expected to give a contribution as needed to the conversation. The Gricean cooperative principle is construed as a theory of communication; it has the interesting consequence that it gives an account of how communication might be achieved in the absence of any conventional means for expressing the intended message (Levinson, 1985; Aristyanti, Sutopo, and Yuliasri, 2020).

The cooperative principle is applied in a conversation in order to make effective communication in which there are at least two people involved. In addition, cooperative principles consist of four maxims, namely the maxim of quantity, the maxim of quality, the maxim of relation, and the maxim of manner that can help the conversation become more effective. Those four maxims are the suggested principles for the speaker and the hearer to show their cooperation by giving appropriate contributions in the conversation. The four maxims manage how people should engage in a conversation such as providing appropriate information, telling the truth, being relevant, and attempting to be as clear as possible. By following the rules of cooperative principles, people are expected to comprehend the meaning and avoid misunderstanding. It also can be said that maxims are related to the success of a communication. However, it depends on the various speakers' approaches to the interaction.

It can be concluded that to achieve a successful conversation, both the speaker and the hearer have to fulfill the cooperative principle.

To make a communication process run smoothly and effectively, the speaker and the hearer have to be cooperative. In this term, cooperative means that the speaker is aware of every statement that the speaker said. By applying cooperative principles, the speaker allows the hearer to draw assumptions about the speaker's intention. In fact, there are still people who sometimes cannot fulfill the four maxims in their social communication by giving more or less information, saying something that is not true, making statements that are not relevant to the topic of conversation, and providing ambiguous information. Whereas people should engage in a conversation such as telling adequate information, telling the truth, being relevant, and trying to be as clear as they can. Grice (1975) stated that a participant in a talk exchange may fail to fulfill a maxim in various ways, such as flouting of maxims, violating the maxim, infringing the maxim, opting out the maxim, and suspending the maxim. By flouting maxims, the participants in conversation seem to be not cooperative when they are talking in conversation, but actually, they do (Nurjannah, Daud, & Fata, 2020).

Flouting of the maxim is the speaker intentionally breaks the rules in order to convey hidden meanings and leads the hearer to find out the implicit meaning from the utterances that contain flouting of the maxim. The speaker wants the hearer to understand the meaning of what they said, either the literal expressed meaning or implied meaning. Flouting of maxims can occur in a conversation in daily life or a movie. According to Levinson, the flouting of maxim occurs when the speaker deliberately ceases to apply the maxims to persuade their listeners to infer the hidden meaning behind the utterances; that is, the speakers employ implicature (cited in Ibrahim, Arifin, and Setyowati, 2018).

There are four types of flouting maxim. They are flouting the maxim of quantity, flouting the maxim of quality, flouting the maxim of manner, and flouting the maxim of relation. The flouting maxim of quantity is not saying enough or too much. The flouting maxim of quality means that the speaker is not telling the truth or the information is not supported by evidence. The flouting of manner implies that people do not give clear information and say something that is ambiguous. The last is the flouting maxim of relation that is people do not say the relevant answer or give information that is not relevant to the topic of conversation. It can be concluded that each of those flouting of maxim describes different types with showing disrespect to the maxim.

The example below may clarify the theory of flouting of maxim:

Anne : Where do you want to go?

Miley: I want to go to minimarket. I want to buy some groceries and milk.

From the example above, Miley's utterance is flouting maxim of quantity. She flouted the maxim because she gave too much information than is required.

Flouting of maxim happens when people that are engaged in conversation deliberately disobeys the maxims. The reasons for the flouting of maxims are to make conversation easier, the speaker does not provide an adequate amount of information, and the speaker does not want to go on with the conversation. "People can refuse to follow a maxim because they are unable to speak clearly, for example, or because they intentionally choose to lie and cover-up something" (Thomas, 1995, p. 64; Lasiana & Mubarak, 2020). Therefore, in doing a conversation, people should know the context and how to respond to the utterances that are needed.

Flouting of the maxim is significant for the listeners to know the intent of the speakers. If the speaker follows the cooperative principles, the conversation will be in line. Meanwhile, if the speaker breaks the rules, there is likely a misunderstanding between the speaker and the listener.

There were a number of previous studies that discussed a similar topic with the researcher's study. The first is the research conducted by Laisana and Mubarak (2020) with the title "An Analysis of Flouting Maxim in Ruby Spark Movie." From the findings of the study, there are four types of flouting maxims that are found in the movie and the flouting maxim of quantity is the most dominant. The second study is the research conducted by Op. Sunggu and Afriana (2020) with the title "Flouting Maxims in "Wonder Woman" Movie." The results of the study reveal that all the characters in the Wonder Woman movie were flouted all of the maxims, and the most frequent is the flouting maxim of relation. The third was done by Ibrahim, Arifin, and Setyowati, who has the title "The Flouting of Maxim in the Se7en Movie Script." This study reveals that there are four flouting of maxims in the movie script, and there are three motivations that influenced the characters flouted the maxims; they are competitive, collaborative, and conflictive. The fourth study is An Analysis of Flouting Maxims in "Coco" Movie. This study was conducted by Rohmanti and Pradika and the results are the maxim flouted 11 times in the dialogue, and there are four kinds of flouting maxims that are found. In addition, the most dominant flouting of maxim in the Coco movie is flouting the maxim of quantity. The last study is the research conducted by Setiawan and Haryani (2020) and the title is "An Analysis of Maxim Flouting in Pokemon: Detective Pikachu Movie." From the results of the study, there are four types of flouting maxim that are found and the most dominant is flouting the maxim of quantity. In addition, there are four motives found in flouting of maxim; they are competitive motive, convivial motive, collaborative motive, and conflictive motive.

The Devil Wears Prada is an American comedy-drama movie directed by David Frankel. This movie was released in 2006. It is based on Lauren Weisberger's novel of the same name that was released in 2003. This movie is about Andrea Sachs or Andy, a young woman who graduates from journalism and comes to New York and becomes the assistant to one of the city's most powerful magazine editors, the cruel and cynical, Miranda Priestly.

Based on the explanation above, the researchers intended to examine the flouting of maxims in the English movie entitled "The Devil Wears Prada" and to find out the most frequent flouting of maxim. In this research, the four maxims are observed in order to see if the characters flout the maxim of quantity, the maxim of quality, the maxim of relation, and the maxim of manner in the movie.

Theory and Method

Theory

Some theories of flouting of maxim in conversation related to this research will be explained. First, the definition of pragmatics will be elaborated. Second, the definition of the cooperative principle will be elaborated. Third, it will explain the four conversational maxims. Then, it will explain about flouting of maxims.

1. Pragmatics

Pragmatics is one of the branches in linguistics. Pragmatics is a branch of linguistics that studies about the relationships between linguistic forms and the users of those forms (Yule, 1996; Lestari, 2019). It is the study of meaning in the context. It is the study that concerns with the interpretation of what the speaker and the hearer mean in a particular context and how the context influences what is said in a conversation. Pragmatics can be defined as a study about the relationship between language and its social context in the process of communication between a speaker and hearer.

2. The Cooperative Principle

Cooperative principle is one of the theories in pragmatics. This term was coined by H.P Grice, a philosopher of language at Oxford University. Grice (1975: 45) as cited in Lestari (2019) defines that cooperative principle leads the speaker and the hearer to make a contribution as is required in a conversation. According to Levinson (2011: 102) as cited in Rohmanti & Pradika (2018), he defines cooperative principle as the specification of “what participants have to do in order to communicate in effective, rational, co-operative ways: they need to speak heartily, relevantly and clearly, while giving sufficient information.”

Cooperative principle can be said as the guidelines for effective communication which helps the speaker and the hearer in delivering their messages or thoughts and conveying the meaning behind them. Therefore, cooperative principle is the speaker must make their contribution as is required, at the stage at which it occurs, by the accepted the purpose or direction of the conversation.

What the cooperative principle says is that people who are involved in a conversation are working on the assumption that certain rules control their operation, for instances, a set of culturally bound rules that vary in different cultures but are followed by all the participants of a conversation in order for a conversation to be successful. In other words, the cooperative principle is that people cooperate when they are exchanging information

3. The Four Conversational Maxims

There are four sub-principles of cooperative principle that are called maxims. They are maxim of quantity, maxim of quality, maxim of relation, and maxim of manner. The function is as guidelines that one should follow for reaching a productive and meaningful communication because they regulate how message are conveyed and responded.

a. Maxim of quantity

Maxim of quantity is that the speakers must say something as informative as required and they are not allowed to say something more informative that is required. It means that the speakers are not allowed to give too much or too little information. It deals with the amount of information presented. On the other hand, the speaker could risk the hearer not to be able to identify what they are talking about in a conversation if they give less information. It is because the speaker is not explicit enough when giving information.

Maxim of quantity comprises 2 sub-maxims: 1) make your contribution as informative as required for the current purposes of the talk exchange in which you are engaged, 2) do not make your contribution more informative than is required. Therefore, maxim of quantity is to make your contribution as informative as is required.

This type of maxim requires the speaker to say something clearly and informative about what needs to be answered or wants to be conveyed in a conversation. In other words, the speaker and the hearer must provide information or give a statement properly so that the information conveyed in the conversation is not less or more that is needed. Therefore, the speakers must make contribution as informative as is required.

b. Maxim of quality

Maxim of quality is the speakers that are engaged in a conversation must say something true as required. It means that the speakers must say

something that is true or they think to be false. It also means that the participants' contribution has to be truthful and sincere.

This type can be said as the person making an utterance should not say something that they do not believe to be true or for which they lack adequate evidence. To fulfil this maxim, the speakers are expected to be honest and being truthful. Therefore, both the speaker and the hearer must give the information based on the reality.

c. Maxim of relation

In maxim of relation, the speakers must give information that is relevant with the topic of conversation. It means that the participants' contribution should be relevant, and it states that the utterance should be relevant and stay on the topic.

In other words, the speakers are expected to not say something that is outside the topic or what was not having the correlation of the topic that is being discussed. To fulfil this maxim, the speakers should not say something that has no correlation of what being discussed. Therefore, this type of maxim is what is said to be related to the previous statement.

d. Maxim of manner

Maxim of manner comprises 5 sub-maxims, namely avoiding obscurity, ambiguity, unnecessary prolixity, being brief and orderly. It states that the utterance should be brief (avoid unnecessary prolixity), be orderly, avoid ambiguity and avoid obscurity of expression.

It can be said that the speaker must give information clear and should not be vague in a conversation. The hearer had to have relation, background information, or little introduction with the topic in a conversation to avoid misunderstanding. Therefore, the speakers should give avoid ambiguous information from the hearer in a conversation.

These four maxims play a dynamic role to associate the conventional organization of speech as unblemished, accurate, descriptive and appropriate.

4. Flouting of Maxims

Flouting of maxims can be defined as when the speakers appear not to follow the rules of maxims but expect the hearers to appreciate the meaning (Cutting, 2002; Nurjannah, Daud, & Fata (2020). There are four types of the flouting of maxim that are explained in the below section.

a. Flouts the maxim of quantity

The maxim of quantity is flouted when a speaker deliberately gives too much or too little information than is needed within a conversation. It means that the speaker says something that is not as informative as is required or more informative than is required, and the speaker might say less or more information to the hearer in a conversation. Therefore, this type occurs when the speaker seems to give less or more information.

b. Flouts the maxim of quality

The maxim of quality is flouted when a speaker deliberately says something that is untrue or for which the speaker has inadequate evidence. The flouting of maxim of quality can be defined as when a speaker gives information that is not true and they say something which lacks of adequate evidence. Therefore, this type of flouting of maxims is when the speaker gives information that does not represent what they think or what happens in the reality.

c. Flouts the maxim of relation

The maxim of relation is flouted when a speaker is giving a response or making an observation that is deliberately not relevant to the topic that is being discussed. It means that the speaker says something that is irrelevant but they have reasons behind the action and usually it is because they have something to hide or they say something not directly. Therefore, the flouting of maxim of relation can be said as the speaker expresses what is in their mind by saying something that does not have any relation to the topic of the conversation.

d. Flouts the maxim of manner

The maxim of manner is flouted when a speaker deliberately fails to observe the maxim by not being brief, using obscure language, not being orderly or using ambiguity. In other words, the flouting of maxim of manner is when the speaker says something that becomes ambiguous or obscure. It can be concluded that the flouting of maxim of manner is the speaker expresses what they think by using words that can cause ambiguity to the hearer.

Method

1. Research Design

This research study uses a descriptive qualitative method which means the qualitative data were collected and qualitatively interpreted. The qualitative method is a research design involving inductive thinking to reveal hypothesis which in turn will become a substantive theory and even a formal theory. Qualitative research is a research design that involves inductive thinking to reveal hypotheses which in turn will become a substantive theory and a formal theory (Atmowardoyo; 2018). Meanwhile, the descriptive method is a method that explains or describes an object research through analyzed data. The descriptive research is defined as a research method used to describe the existing phenomena as accurately as possible (Atmowardoyo; 2018). Therefore, the researcher decided to use a descriptive qualitative method to analyze the flouting of maxim in 'The Devil Wears Prada' movie script.

2. Data and Sources of Data

The data of this research were in the form of utterances that contained flouting of maxim in 'The Devil Wears Prada' movie script. The movie transcript was taken from <https://www.dailytranscript.com>. Nevertheless, the main source data was the utterances of the whole characters and the context from the whole movie. The researchers collected the data from 'The Devil Wears Prada' movie's transcription as the data source.

3. Data Collection Technique

In collecting the data, the researchers did several steps to collect the data. First, the researchers watched this movie. Second, the researchers downloaded the English subtitle and the movie transcript to collect the secondary data and help the researcher analyze the data. Third, the researchers took some notes of the utterances from the dialogue of the movie. Last, the researchers recorded the data into data sheets. Those steps were done several times to make sure that the data was completely recorded well.

4. Data Analysis

The process of data analysis for this research is began with selecting the data that contained flouting of maxim. Then, the researchers eliminated the data that did

not contain the criteria of flouting of maxim. After that, the data were organized based on the same characters of flouting maxim. Lastly, the researchers would draw a conclusion based on the data display and after analyzed the data.

To choose the most frequently flouting of maxim among flouting of maxim quantity, flouting of maxim quality, flouting of maxim manner, and flouting of maxim relation based on the Grice's theory, the researchers used percentage category as follows:

$$P = F/N \times 100\%$$

P = Percentage

F = Frequency

N = Number of Maxims

Findings and Discussion

The researchers found 18 data in the dialog in *The Devil Wears Prada* movie. From 18 data, it was found that 9 data as flouting the maxim of quantity, 2 data as flouting the maxim of quality, 2 data as flouting the maxim of manner, and 5 data as flouting the maxim of relation.

The summary of flouting maxims in the “*The Devil Wears Prada*” movie is displayed in the table below:

Table 1. Table of Types Flouting of Maxims in “The Devil Wears Prada” Movie

No.	Types of Flouting Maxims	Frequency	Percentage
1	Quantity	9	50%
2	Quality	2	11%
3	Manner	2	11%
4	Relation	5	28%
	Total	18	100%

Based on the findings above, the most frequent flouting of maxims is flouting the maxim of quantity (50%). The maxim of quality flouted two times or 11%. The maxim of manner flouted two times or 11%. Then, the maxim of relation flouted five times or 28%.

Based on the table above, here are the explanations of each flouting of maxims in “*The Devil Wears Prada*” movie:

Flouting Maxim of Quantity

Data 1

Andy applied for a job in *Runaway* magazine. On that day, she came to interview. Andy asked the receptionist that Andy had an interview with Emily, and it turned out that at the time, Emily was near the reception desk. Then, she told Andy to follow her to the *Runaway* office.

Emily : Andrea Sachs?

Andy : Yes?

Emily : Great. Human Resources certainly has an odd sense of humour.
Follow me.

Okay, so I was Miranda's second assistant but her first recently got promoted, and now I'm the first

Andy : Oh, you're replacing yourself.

The dialogue above is flouting of maxim. It is included to flouting the maxim of quantity because Emily gave more information about herself than Andy needed when they are walking into Runaway office by saying that she was Miranda's second assistant and Miranda's first assistant got promoted. She flouted maxim of quantity because she wanted to explain more about herself and to tell that she got promoted to be Miranda's first assistant.

Data 2

Andy applied for a job as an assistant at one of the well-known fashion magazines, Runway. On that day, she came to the Runway office to interview, and at that time, Miranda had just come to the office. Miranda noticed Andy and asked Emily who Andy was. Then, Miranda said that she would interview Andy by herself.

Miranda : Who are you?
 Andy : My name is Andy Sachs. I recently graduated from
 Miranda : What are you doing here?
 Andy : I think I could do a good job as your assistant and I came to New York to be a journalist and I sent letters to everyone and I finally got a call from Elias Clarke and met with Sherry in Human Resources and basically it's this or Auto Universe.

The dialogue above is flouting of maxim. It is included in flouting the maxim of quantity because Andy gave more information about herself than Miranda needed when she was interviewed. It can be seen when Miranda asked, "what are you doing here?" but Andy answered it with a long answer. She flouted maxim of quantity because she wanted to explain more about herself in the interview.

Data 3

It was Andy's first day working as Miranda's second assistant in the Runaway magazine. At that time, Emily was explaining what Andy had to do in the office.

Emily : Remember, you and I have totally different jobs. You run errands, you get coffee, etc. I am in charge of her schedule, her expenses, her appointments, and most importantly I get to go with her to Paris for Fashion Week in the fall. I get to wear couture, go to all the shows, all the parties, meet all the designers. It's divine.

The utterance above is flouting maxim of quantity. It is because Emily gave more information about Paris Fashion Week to Andy when she explained what Andy had to do in the office. It could be seen after Emily explained about Andy's job in the office, she said that she wanted to go to Paris Fashion Week and what she wanted to wear for the occasion which is flouted maxim of quantity.

Data 4

On the night before coming home from work, Andy talked to Emily, and she asked what Emily would do on the weekend.

Andy : Thanks God. It's Friday, right? At least Miranda will be in Miami, so we don't have to be on call this weekend. You know, my dad's coming in from Ohio. Yeah, we are gonna out to dinner and maybe see Chicago. You doing anything fun this weekend?
 Emily : Yes.

This is one of flouting maxim of quantity. It can be said that Andy gave more information than Emily needed to know about what she would do on the weekend. She made her contribution more than is required by saying, “you know, my dad’s coming in from Ohio. Yeah, we are gonna out to dinner and maybe see Chicago.”

Data 5

Andy had just arrived at the restaurant to have dinner with her friends. Then, she gave them a few things that she got from Miranda as present for them.

- Lily : What is that?
Andy : It’s a Bang and Olufsen phone. Charlie Rose sent it to Miranda for her birthday. I looked it up online. It’s eleven hundred dollars.

The dialogue is the data of flouting the maxim of quantity. Andy was flouting this maxim because she was providing more information that is needed in the conversation. She gave too much information about a Bang and Olufsen phone than Lily needed to know by saying that it was Charlie Rose’s present for Miranda and by telling her that the price was eleven hundred dollars.

Data 6

After work, Andy was having dinner with her friends at a restaurant. Then, she gave a blue purse that she got from Miranda to Lily.

- Andy : Oh, one more Little things. Do you want it? You want Oh.
Lily : Give me, give me, give me!
Andy : I think she likes it.
Lily : Where did you get this? This is the new Marc Jacobs. This is sold out everywhere. Where did you get this?

The dialogue above is flouting the maxim of quantity. It could be seen that Lily gave more information when she received the bag from Andy by saying that the bag was the new Marc Jacobs and it was sold out. She flouted the maxim because she wanted to show how she felt when she received the purse.

Data 7

Andy came to James Holt's party to deliver Miranda's message to James Holt. After that, he escorted Andy to the bar table and ordered the punch to the bartender for Andy.

- James Holt : Excuse us, girls. She’ll have the punch. It’s deadly. Have fun.
Then, Andy grabbed the punch.
Christian : He’s right. You know. The punch. I drank it at his last party. I woke up in Hokoben wearing nothing but a poncho and a cowboy hat.

This utterance is flouting the maxim of quantity. It is because Christian gave more information when he was talking with Andy at the party. Christian gave too much information by saying that he drank the punch at the party, and then he woke up wearing a poncho and a cowboy hat in Hokoben.

Data 8

Andy came to James Holt's party to deliver Miranda's message. She accidentally met Christian Thompson and became acquainted with him.

- Andy : Hi.
Christian : Christian Thompson.

Andy : Christian Thompson? You're kidding. No, you're You write for, like, every magazine I love. I actually reviewed your collection of essays for my college paper.

The dialogue is flouting the maxim of quantity. It is because Andy said something that was more than Christian wanted to know. It can be seen when Christian introduced himself, but Andy said something with a long utterance by saying that she loved Christian's writings, and Andy reviewed his essays for her college paper.

Data 9

The night before, Andy drove the Book to Miranda's house. However, she made a mistake while delivering the Book. The next day, Emily scolded Andy.

Andy : Okay. Okay. I made mistake. I know.
Emily : Andrea, you don't understand. If you get fired, that might jeopardize Paris for me. And if that happens, I will search every Blimpie's in the tristate area until I find you and kill you.

This utterance is flouting the maxim of quantity. It is because what Emily says is more than Andy needs to know. Emily scolded Andy because she made a mistake when she delivered the Book, but Emily flouted the maxim of quantity by saying, "if you get fired, that might jeopardize Paris for me. And if that happens, I will search every Blimpie's in the tri-state area for you."

Flouting Maxim of Quality

Data 1

At that time, Miranda was giving a speech and announced that Jacqueline Follet as the new editor in chief in Runaway magazine. However, Nigel was shocked and upset about what Miranda had announced.

Nigel : When the time is right, she'll pay me back.
Andy : You sure about that?
Nigel : No, but I hope for the best. I have to.

This conversation is flouting the maxim of quality because what Nigel said is not true that is he is still not sure that Miranda will pay him back. He answered Andy's question with doubt. Nigel hoped that he would be the new editor in Runaway magazine, but in fact, Jacqueline Follet who occupied the position.

Data 2

After Andy decided to quit working in Runaway, she accidentally passed the Runaway office. Then, he called Emily to offer some clothes from Paris because she felt she would not wear these clothes.

Andy : The thing is, I have all these clothes from Paris and I don't have any place to wear them, so I was wondering if you could take them off my hands.
Emily : Well, I don't know. It's a huge imposition, and I'll have to get them take in. I mean, they'll drown me. But I suppose I could help you out. I'll have Roy pick them up this afternoon.

The dialogue above is flouting the maxim of quality because Emily said something which was not true that she did not want the clothes from Paris, and she was very happy that Andy offered her clothes from Paris.

Flouting Maxim of Manner

Data 1

The day after Andy was accepted to work as a second assistant to Miranda, Emily explained the tasks Andy had to do while working.

Emily : Okay, stay here. I'm going to the Art Department to give them the Book.
Andy : The ...?
Emily : This is the Book. Now, it is the mock-up of everything in the current issue. We deliver it to Miranda's apartment every night and she returns it in the morning with her notes.

The dialogue above is flouting the maxim of manner because the word "book" causes ambiguity between Emily and Andy. Andy thought that the book Emily means is a book as usual or a book in literal meaning. However, the Book that Emily means is a mock-up of Runaway magazine.

Data 2

At that time, Miranda was having a meeting in her room, and she called Andy by the name Emily. It made Andy confused and thought that Miranda was calling Emily, her first assistant. However, Nigel, who was standing in front of Andy's desk at the time, said that Miranda meant Andy.

Miranda : Emily!
Nigel : She means you. Go!

The dialogue above is flouting maxim of manner. It is because Miranda called Andy as Emily, so that Andy was confused. Because of that, it causes ambiguity to Andy. She thought that Miranda was calling Emily, but actually, she was calling Andy. It is because that Miranda did not know Andy very well yet. Therefore, this conversation flouted maxim of manner.

Flouting Maxim of Relation

Data 1

At night, Andy was with her boyfriend, Nate, and two of her friends, Doug and Lily. They were having dinner at the restaurant.

Nate : Wait. You got a job at a fashion magazine. Was it a phone interview?
Andy : Don't be jerk.

The dialogue above is flouting the maxim of relation. It is because Andy gave an irrelevant answer to Nate's question. Nate asked a question about Andy's interview in the Runaway office, but Andy answered the question with something which is not relevant to the question. She flouted the maxim of relation because she responded to Nate's question as a joke.

Data 2

Andy was having dinner with her friends. She told them that she got a job as Miranda's assistant. Andy also told them what the people who worked there were wearing. In addition, she also said that before that, she did not know who Miranda Priestly was.

Andy : Okay, how is it that you know who she is and I didn't?
Doug : I'm actually a girl.

The conversation is flouting the maxim of relation because Doug did not give a relevant answer to Andy's question. If the speakers failed to be relevant in communicating, they would flout the maxim of relation. This conversation happened when Andy asked why Doug know about Miranda while she did not know her. It can be seen from Doug's utterance that he gave unnecessary additional information and is not relevant with Andy's question.

Data 3

Miranda was having a meeting in her room, and she called Andy by the name Emily, her first assistant. Because of this, Andy was confused and made Miranda had to call him many times.

Miranda : There you are, Emily. How many times do I have to scream your name?
Andy : Actually, it's Andy. My name is Andy. Andrea, but people call me Andy

The dialogue is flouting the maxim of relation. It because Andy answered Miranda's question with an irrelevant answer. Miranda was angry because Andy did not come yet, but Andy replied by saying that her name is Andy, not Emily. She said this so Miranda would remember her name and not call her Emily.

Data 4

Andy was having dinner with her friends and gave them a few things that she got Miranda. She also gave a bag to Lily, and Lily was so happy when she received it.

Nate : Why do women need so many bags? You get one, it holds all your junk, that's it, you're done.
Doug : Fashion is not about utility. An accessory is merely a piece of iconography used to express individual identity.

The dialogue is flouted maxim of relation. It is because Doug answered Nate's question with irrelevant information. It could be seen that after Lily received the bag, she was so happy. Then Nate asked why women need so many bags, and he thought that women need only one bag that they can put all the kinds of stuff into it. However, Doug answered it with irrelevant information.

Data 5

In the evening, when they were in Paris, Andy told Miranda the schedule for tomorrow and asked if there are any changes to the activities that will be carried out tomorrow.

Andy : So, I don't need to fetch Stephen from the airport tomorrow?
Miranda : Well, if you speak to him and he decides to rethink the divorce, then yes, fetch away.

The dialogue is flouting the maxim of relation. It flouted maxim of relation because Miranda answered Andy's question with irrelevant answer. From the utterances above, it happened when Andy told Miranda about her schedule. When she asked Miranda, Miranda did not answer the question directly to the point and gave unnecessary additional information. This could happen if people did not want to say directly, the flouted maxim of relation.

Conclusion

This research was conducted to identify and analyze the flouting of maxims in the movie entitled "The Devil Wears Prada," Based on the research of the dialogue The Devil Wears Prada movie, the researchers conclude that there are four types of flouting of maxims in the movie and there are 18 data that have been analyzed as flouting of maxims as follow: 9 data or 50% as flouting the maxim of quantity, 2 data or 11% as flouting the maxim of quality, 2 data or 11% as flouting the maxim of manner, and 5 data or 20% as flouting the maxim of relation. The maxim of quantity is the most maxim flouted by the characters in the movie. It is very significant to know what is flouting maxim is because it is useful for people to avoid misunderstanding when communicating with others.

From this research, the researchers hope this research could be useful for the next researchers who conduct research on pragmatics studies. The researchers also suggest the further researchers who conduct research analyzed the flouting of maxims but using different movies, or using the same movie but in different theories. In addition, hopefully, this research can be used as a reference for another research about the flouting of maxims but using different movies.

STIBA Invada Cirebon^{1,2}

Abstract

The aim of this paper is to discuss the non-observance of Cooperative Principle's maxim that generates humor on Barack Obama's utterances. Specifically, it explores the violation of Grice's Maxim in the program of talk show and explain how the violation of the maxims brings about humorous effects in the television program. This research was conducted employing descriptive qualitative in pragmatic field and documentation technique as the data collecting method. The data were taken from The Tonight Show Starring Jimmy Fallon, and Jimmy Kimmel Live when Obama came as their guest star. By using descriptive qualitative method, this paper tried to show the implicatures that occurred in the utterances of Barack Obama in interview which violated Grice's Maxim and generate humor, then they were classified based on Grice's theory of Cooperative Principle and Berger's theory of technique of humor. The finding shows that there are 41 Obama's utterances that generate humor. There are three ways of non-observance of maxims namely flouting, violating, and opting out. The four types of maxims are found all non-observed to generate humor. The study also reveals that from the 41 data, there are seven techniques out of 15 techniques of humor namely facetiousness, allusion, definition, exaggeration, irony, ridicule, and bombast. The study concluded with the following implications that humorous implicature depends on language shared among speaker's community; it arises as a result of speaker's expressions that inclined to be incongruous.

Keyword: cooperative principle; humor; non-observance of maxim; talk show

Introduction

An effective interaction is required to establish and maintain daily social relationships. Language therefore is used as code for communicating and delivering the thoughts, feelings, and emotions of interlocutors. In social interaction, people who get involved in interaction must be cooperative with each other. In this case, a linguist Paul Grice (1975) proposed the theory of cooperative principle namely maxims to be observed in making an ideal communication. The most essential of cooperative principle is that at the time of conversing, people cooperate (Thomas, 1995)

However, people do not always tend to observed maxims. In fact, there are many times when people fail in applying the cooperative principle in their daily conversation. But this case raises on the question, "Does non-observing of cooperative principle make the conversation disruptive?" having weakness to notice the maxims is not associated with futile or useless conversation. There are various factors which can affect the speaker's language to deliver their intention, the conversation will be still effective if the interlocutor still captures the mean of the speaker and give any contribution. One of the factors in failing to observe the general idea of intelligible communication is to generate humor. Apart from the possible

created meaning, violation of a maxim can bring about humorous forces in the spoken discourse (Taberski, 1998).

The linguist Paul Grice (1991) proposed the theory of cooperative principle which is become some basic rules to be obeyed in order to have an ideal communication. Grice (1991) introduced the Cooperative Principle, as:

“Make your conversational contribution such as is required, at the stage at which it occurs, by the accepted purpose or direction of the talk exchange in which you are engaged.”

Grice suggests every participant who is involved in a conversation has to give a necessary contribution to comply with the desire of the other participant. They have to give their contribution that is enough, honest, relevant, and clear so it will not bring out any misleading.

Theory and Method

The cooperative principle is divided into four categories of maxims. The categories are the maxim of quantity, the maxim of quality, the maxim of relation, and the maxim of manner. These four categories are the more detailed instruction of how the participant should give their contribution as required in a conversation. Grice also added that there are more specific maxims under the four categories of maxims. Below are the explanations of the four categories of maxims according to Grice (1991)

Maxim of Quantity

This category is related to the quantity of the information given. Under the maxim of quantity there are two more specific maxims:

- a. “Make your contribution as informative as required”
- b. “Don’t make your contribution more informative than is required”

Maxim of Quality

For the maxim of quality, there is a supermaxim “try to make your contribution one that is true” and there are two specific maxims fall under this category:

- a. “Do not say what you believe to be false.”
- b. “Do not say that for which you lack adequate evidence.”

Maxim of Relation

The only maxim under this category is “be relevant”.

Maxim of Manner

This category carries the supermaxim “*be perspicuous*.” There are various specific maxims, such as:

- a. “Avoid obscurity of expression.”
- b. “Avoid ambiguity.”
- c. “Be brief.”
- d. “Be orderly.”

According to this principle of cooperation, for the sake of success in language communication, speaker and the hearer are required to be very accommodating with each

other and obey these principles tacitly. By way of contrast, both parties of communication neglect these principles in the situation of real daily life. In other words, they frequently violate the cooperation principle either intentionally or unintentionally. Under such circumstances, the interlocuter attempt to catch the meaning through an illocutionary meaning of the speaker's words. Consequently, the way of this communication process frequently yields humor (Yanyan, 2009).

Non-observance of Maxims

The cooperative principle (with its maxims) is not always observed by people. Sometimes people disobey the rule of cooperative principle whether it is deliberately or accidentally. This situation when people fail to observe the maxims is called the non-observance of maxims. People may fail to observe these maxims because of their incapability of speaking clearly, or because they deliberately choose for lying (Thomas, 1995). According to Thomas, there are five ways of failing to observe the maxims. Thomas develops the idea of Grice about the non-observance of the maxim, he stated that in his first paper Grice (1975) listed three ways of failing to observe the maxims: the speaker may flout a maxim, violate a maxim, or opt out of observing a maxim. The two categories were added later one by one, they are: infringing a maxim and suspending a maxim.

Flouting a maxim

Flouting can happen if the participant blatantly fails to fulfill the maxim (P. Grice, 1991) and expects the listener to notice the additional meaning that implied in the speaker utterance. By being clear in non-observe the maxim, the speaker can imply a meaning beyond what they actually utter.

Violate a maxim

Grice (1991) stated that "*he may quietly unostentatiously violate a maxim; if so, in some cases he will be liable to mislead.*" It can be defined as the unostentatious non-observance of maxims that disposed into some misleading. The speaker that violate a maxim is deliberately choosing to give less information, dishonest, irrelevant or ambiguous so the interlocutor will not know the truth and will only understand the surface meaning of an utterance (Cutting, 2002).

Opting out a maxim

The participant may opt out from the operation both of the maxim and the cooperative principle, the participant is unwilling to cooperate in the way the maxim requires (Grice, 1991:30). In simple the participant may come out choose not to cooperate in the conversation. Even though they do not want to seem as uncooperative, they cannot cooperate in the way expected sometimes because particular reason such as legal or ethical reason, and they say so (Cutting, 2002).

Infringing a maxim

The speaker has no intention to produce an implicature and has no intention to deceive are said to 'infringe' a maxim. Rather than having an intention to non-observance the maxims and generate some implicature, the speaker who infringe a maxim has to non-observe the maxim because they had some imperfect linguistic performance. A speaker can infringe a maxim because they have an imperfect command of the language (a young child or a foreign learner), the speaker's performance is impaired in some way (nervousness, drunkenness, excitement), if they have a cognitive impairment, or if they are simply incapable of speaking clearly (Thomas, 1995).

Suspending a maxim

Suspending a maxim is the way of failing to observe the maxim in case that the speaker no need to opt out of observing the maxims because there are certain situations in which there is no expectation of the maxim to be observed, hence the fulfillment of the maxim will not generate any implicature (Thomas, 1995). This kind of non-observance may be culture-specific or specific to a particular event.

Humor

Humor is a quality that refers to everything that is apprehended as funny to make people laugh. But humor can be apprehended to be not funny if the interlocutor does not get the amusing feeling to the humor conveyed. This is because even though every people have a humor sense but the humor sense can be different from each other. Thus, the listener's reaction to humor conveyed is important.

This study analyzes the technique of humor based on the category of language (*the humor is verbal*) according to Berger (1993) since this study only focuses on the utterance of Barack Obama. Below is the table of the further explanations of each technique of humor in the language category according to Berger.

Table 1. The Technique of Humor in Language Category

No	Technique of Humor	Description
1	<i>Allusion</i>	Allusion is often related to social matter such as the situation which has sexual matters, personality traits, behavioral characteristic, or other things that can embarrass people but not hurt them.
2	<i>Bombast</i>	It is the technique by differing what it should be uttered and how it should be uttered. Something nonsense can be perceived as something really meaningful but with an excessive explanation so that humor can occur.
3	<i>Definition</i>	Humor in this technique including an element of trickery to make an ordinary definition that has been widely known to be something very serious.
4	<i>Exaggeration</i>	Humor by exaggeration should be tied with something else as the basic thing to be developed in creating humor.
5	<i>Facetiousness</i>	This technique is generally taken to the intention of joking. It usually involved the element of ambiguity and the speaker does not really take it seriously.
6	<i>Insults</i>	In this technique the hostility becomes obvious. To be seen as funny, insult must have a comic play frame or other techniques included.
7	<i>Infantilism</i>	This humor is influenced by the feel of frustrated about rational criticism, so it generates the desire for imitating children in manipulating sound and words which make them feel happy.
8	<i>Irony</i>	This technique originated from the gap that exists between the utterance and its meaning. An irony usually has an opposite meaning than it said, so people should realize it so the humor can be generated.
9	<i>Misunderstanding</i>	The misunderstanding tied of someone's language problem that affected from verbal matter to bring out the ambiguity of language

or oddity when the conversation is out of the context.

10	<i>Over literalness</i>	This technique is basically related to an inability in perceiving or understanding the circumstances, even sometimes there is a matter of stupidity and misunderstanding.
11	<i>Puns, Word Play</i>	In this technique, not only the play on sound but also a play on meaning. A word can be used to stand for something else.
12	<i>Repartee</i>	This technique is done by against the insult given with a better insult. This verbal outwitting usually done to escape from the embarrassment.
13	<i>Ridicule</i>	Ridicule is a form of direct verbal attack to someone, item, idea/opinion. This technique can be done by <i>deriding</i> , <i>mocking</i> , and <i>taunting</i> .
14	<i>Sarcasm</i>	Sarcasm often conveys a hostile manner by cutting, contemptuous, and 'biting' remarks. That is why the manner it delivers is important. Sarcasm can be a costly kind of humor, unless it directly delivers to the victim of humor.
15	<i>Satire</i>	Satire is used to attack a person, group, even an incident. Even it is similar to quip, it included in a dominantly satire utterance rather than a critic. Thus, blaming or complaining things/ situation can generate as humor.

(Berger, 1993)

A large number of existing studies in the broader literature have examined cooperative principle addressing the same problem in different genres. For instances, the study conducted by Chaiprekkul (2013) and Nandiwardana (2016) examined humor in the cooperative principle perspective and the technique used in generating humor. The data of the study were taken in more artificial setting such as situational comedy and comic books and the humor being analyzed was not specified.

Another study has been conducted by Hu (2012). It aimed at exploring the verbal humor in the "Big Bang Theory" with reference to the Cooperative Principle and the Relevance Theory. The findings of the study showed that humor was created when any of the four cooperative maxims was violated or flouted. As the framework of the relevance theory, the findings showed that humor is viewed as an ostensive-inferential process. The study suggested that these theories are efficient in accounting for the creation of comic effects.

Furthermore, Xiaoqin investigates the communication strategies employed by experienced ground service staff based on four maxims of Grice's cooperative principle framework. This study exploits that in the ground service communication context, two salient reasons stimulate the overcommunication strategies; namely, to improve the service quality and to enhance the passenger's satisfaction. By integrating business communication in ESP context to the classical theory of pragmatics, this study attempts to offer practical suggestions to the frontline communicators (Xiaoqin & District, 2017).

The advantage becomes all the more significant when using the data in a more natural setting instead of an artificial setting. In this case, the data taken are derived from the 44th president of USA Barack Obama's utterances in a talk show. Being a president, which seems to be a job that far from humor is does not mean that he has to be serious all the time. As a person, President Obama surely has a sense of humor. Even though he cannot freely generate humor because he has to maintain his self-image as a president, especially in front of the camera like TV talk shows. Obama has been invited to be a guest star in several TV talk shows *The Tonight Show Starring Jimmy Fallon* on June 9, 2016 and *Jimmy Kimmel Live* on

October 25, 2016. The writer prefers to use these talk shows since Obama clearly shows his way to generate humor through the contribution in the conversation with the host. In this study, the writer aimed to describe non-observances of maxims which generate humor on Barack Obama utterances and to discover the technique used by Barack Obama in generating humor.

The design of this research is descriptive qualitative method with phenomenology approach. The qualitative method is applied because the writer investigates the data to understand the phenomena of generating humor by Barack Obama. In additions, the phenomenology approach is applied, since it aims to describe the phenomena of humor generated by Barack Obama in the perspective of the cooperative principle. The writer applies the descriptive qualitative method because the data is used to exploratively describe the phenomena of non-observance of the maxim in generating humor. The writer uses this method by considering the result of this research is not shown in a statistic form but in the form of description. The data are taken using audio-visual retrieved from *Youtube*. The source of the data then transcribed into written text and reduced. The data then classified into the way of the non-observance of maxims, the maxims that being non-observed, and the techniques of humor used. After that the writer validates the accuracy of the finding to ensure that it is enough to answer the statement of the problem.

Finding and Discussion

According to the findings of the data, there are found the non-observance of maxims that generate humor on Barack Obama utterances in the talk shows. There is a total of 41 data that generate humor. The non-observance of the maxim that appears the most is flouting which has 25 utterances with the maxim of manner which dominated the category with 17 total data. The other maxim has the total data 5 (five) for the maxim of quantity and 3 (three) for the maxim of relation. The second-largest data is violating the maxim with the amount of 15 data. In violating category, Obama often violated the maxim of quantity with 8 (eight) data, followed by violated the maxim of relation with total 4 (four) data, 2 (two) data for the maxim of quality, and 1 (one) data for the maxim of manner. The last way is opting out the maxim of relation which only has 1 (one) data. From the 41 data also, there are 7 (seven) techniques out of 15 techniques of humor found. The techniques are facetiousness which has 16 data, allusion which has 10 data, definition which has 8 (eight) data, exaggeration which has 3 (three) data, irony which has 2 (two) data, ridicule which has 1 data, and bombast which has 1 data.

The following table is the data sample which is obtained from the most dominated data in the findings.

Table 2. The display data
The non-observance of Grice's cooperative principle and technique of humor in Barack Obama's interview

Data Code No	Utterance	Non-Observance	Maxim	Technique of Humor
DL/V2/31	Kimmel: At that moment did you know that it was going to be as notable as—	Flouting	Manner	Allusion
	Obama: Yes.			
	Kimmel: —It turned out to be?			
	Obama: <u>Well, didn't you?</u>			

TS/V1/16	Fallon: Here's a card. Here's a pen.			
	Obama: All right. <u>That's a nice pen. Can I keep it?</u>	Violating	Quantity	Facetiousness
DL/V2/28	Kimmel: Do you hate the person--			
	Obama: <u>Let me knock on wood, because I'm only got two or three months left.</u>	Opting Out	Relation	Facetiousness

The data sample are further explained in discussion.

According to the findings above, the writer has made a recapitulation table. There is three recapitulation table to show the data amount of the non-observance of maxims classification, technique of humor classification, and also the context of the humor utterances.

**Table 3. The display data
Non-Observance of Maxims Classification**

Maxims	Non-Observance of Maxim			Total
	Flouting	Violating	Opting Out	
Manner	18	1	-	19
Quantity	4	8	-	12
Relation	3	4	1	8
Quality	-	2	-	2
Total	25	15	1	41

Based on the table above, it can be seen that the percentage of each data are 61 % for flouting the maxim, 36,6 % for violating the maxim, and 2,4 % for opting out the maxim. The maxims itself have a percentage of 46,3 % for the maxim of manner, 29,3 % for the maxim of quantity, 19,5 % for the maxim of relation, and 4,9 % for the maxim of quality.

The most dominated way of non-observance of maxims is flouting. The way Obama generate humor is often done by making an additional meaning from his contribution, either it is by using obscurity of expression, saying less or more than required, and give unrelated topic. And the most dominated maxim is the maxim of manner. Obama often uses obscurity of expression to make his humor easier and faster to be understood. From what the researcher has been seen from his answer from the talk show, this is influenced by the culture of American native speaker who likes to depict his utterances (such as an idiom) in order to make the utterance either easier to be understood or others.

Table 4. The display data Technique of Humor

Number	Technique of Humor	Total	Percentage
1	Facetiousness	16	39 %
2	Allusion	10	24,4 %

3	Definition	8	19,5 %
4	Exaggeration	3	7,3 %
5	Irony	2	4,8 %
6	Ridicule	1	2,4 %
7	Bombast	1	2,4 %
Total		41	100%

The technique of humor that often use by Obama is facetiousness. Obama often generates humor uses a deliberate intention to make his contribution to making a joke. A joke is an amusement act, utterance, or circumstance (Hornby, 1984: 464). Here, Obama often makes a joke by his utterances and rarely gives any move and make a humor situation. Based on his answer in the talk shows, the way Obama generate humor is in the way he is not hurting other people, he is not maintaining the gap (hostility) between him and the people.

**Table 5. The display data
Conversation Context**

Number	Contexts	Total	Percentage
1	Daily Life	16	39 %
2	End of Presidency	10	24,4 %
3	Family Life	8	19,5 %
4	Talk Show Talk	3	7,3 %
5	Presidential Election	2	4,8 %
Total		41	100%

Obama often generates humor when talking about his daily life and less generate it when talking about a serious topic such as the presidential election. This shows that Obama knows the right moment when he has to be humorous and serious. He knows that he can generate humor at a light topic such as his daily life and tends to be serious when talking about a serious topic such as a presidential election.

Below is the further explanation of the non-observance of maxims to generate humor. The explanations below are taken from the sample of the data that has been displayed in the finding.

Kimmel: At that moment did you know that it was going to be as notable as—

Obama: Yes.

Kimmel: —It turned out to be?

Obama: Well, didn't you?

(DL/V2/31)

The conversation above is about the controversial “Access Hollywood” tape that happened nearly a month before the election for president. The tape he meant is the video about a vulgar conversation between Billy Bush and President Trump who was the star of *The Apprentice* at the time.

In his contribution, Obama gives his answer by giving an implied meaning, which means he has flouted the maxim. The host asked him whether he knew that the video would be such a controversial topic. In his contribution, Obama gives the host a question rather than a direct statement. Obama asked if the host did not know or predict the video would not going to be controversial. This question could be interpreted that Obama has known or simply can predict the video would be controversial. The contribution through a question to answer a question makes him flouts the maxim of manner in case of using obscurity of expression.

Humor in his contribution is made by the technique of allusion. By questioning the host's prediction about the video, he slightly makes the host be embarrassed and make the audience laugh at the host.

Fallon: Here's a card. Here's a pen.

Obama: All right. That's a nice pen. Can I keep it?

(TS/V1/16)

In the data above, Obama and the host are ready to write thank-you notes. It is one special segment that the talk show had when Obama came as their guest. They made this special segment by considering approaching the end of Obama's second term and he must be having a lot of thanks to the people. In this segment, both Obama and the host would write their thank you note on a card. At the time, the host gives Obama a card and a pen.

Obama violates the maxim of relation on his contribution to the host action. He does not generate any additional meaning and misleads the interlocutor by saying the pen is nice while the pen itself is only an ordinary pen. Obama gave more information than required about the pen, he even asked if he can keep the pen.

The humor here is generated from the technique of facetiousness. Obama deliberately joking by asked if he can keep the pen. What makes it as humor is because it seems to be unusual to see a president asked whether he can keep a pen because it is a nice pen.

Kimmel: Do you hate the person--

Obama: Let me knock on wood, because I'm only got two or three months left.

(DL/V2/28)

The data above takes place when the host asked is there some who wake him up from sleep if something big happened like in the movie he saw.

Firstly, Obama said that he has a phone on his bedside and every morning there will be a wake-up call on 7 AM. To answer the host's question, he indirectly said that there are times when people wake him up in the middle of the night because something big happened. For example, is when the typhoon hit Japan, Fukushima. Obama along with expert and military has to make sure if there any potential of nuclear disaster and they help Japan. But, most of the time people let him sleep and tell him later in the morning unless it is a serious problem that has been anticipated.

Finally, the host asked if Obama hate the person that usually wakes him up in the morning because of such things happened. But Obama refuses to cooperate in giving an answer to contribute in their conversation which makes him opted out the maxim. His refusal trough giving an unrelated answer makes his contribution has opted out the maxim of relation.

The humor in this context was made by the technique of facetiousness. Here Obama generally takes his refusal as the intention of joking. It can be the fastest way to cut the host's question that makes him talked about his tough job as a president while he only has two or three months left on before he finishes his presidency.

Conclusion

The way non-observance of maxims found are flouting, violating and opting out and all of the maxim are found non-observed. Among all of the classification, flouting the maxim of manner and violating the maxim of quantity become the most dominated one. This is happened because of Obama's behavior who often gives depict his utterance and talkative. He makes many depictions to make his answer easier to be understood. Moreover, he also often explained the reason behind his answer in a lot of words, it can be seen that he chooses that way to avoid any misunderstanding. Obama also place himself in a right moment in generating humor. He tends to be a lot generate humor when talking about his daily life but less generate humor when he is talking about a serious topic such as a president election.

The technique of humor used is facetiousness, allusion, definition, exaggeration, irony, ridicule, and bombast. Among the techniques found, the most dominant is facetiousness and allusion. Obama likes to deliberately make a joke through either he depicts his answer, say something more or less than required, and give something unrelated to the topic. He also makes humor by insinuating the other people, but not in a way to hurt them. His way to generate humor tends to be a smart and friendly way. He likes to make a joke without making any misunderstand and not prioritizing the gap (hostility) between him and the interlocutor or someone he mentions to make humor. This could be affected by his position as a president to keep his self-image in front of the public.

This article has made a number of significant contributions to the field of pragmatics, particularly on the cooperative principle which is able to reveal humor aspect from one's utterance. Hence, the author suggests for the next researcher to use different perspective such as sociolinguistic or semiotic in analyzing the humor since there are many theories of humor that have been conducted by other linguists are not limited to Berger (1993). In addition, the author recommends to take the data derived from various public figure such as the one from politic, economic, education, etc. to see the comparison of the findings.

Discourse Analysis on Inspirational local figure's social media posts and comments: In Society 5.0 Perspective

Ariani Rosadi¹, Lubis Hermanto²

arianirosadistisipmbojo@gmail.com¹, lubis.hermantostisipmbojo@gmail.com²

Sekolah Tinggi Ilmu Sosial dan Ilmu Politik Mbojo Bima^{1,2}

Abstract

In facing the era of society 5.0, education plays an important role in developing creativity, critical thinking, communication, and collaboration for the current generation. Technologically, social, economic, political, and educational aspects involve online interaction. This topic is worth discussing in language studies, especially discourse analysis on social media. Using social media applications as a new form of communication is becoming increasingly simple and popular. One of the most popular social media apps is Facebook where people can connect each other, obtain information, provide some opinions about it, and even share it with others. In fact, people can become famous just by posting their activities. Likewise, a Facebook account named "Rangga Babuju" account from Bima, West Nusa Tenggara, can reach more than thirty thousand followers. This account is very updated to respond to global and regional issues. Therefore, this study aims to analyze the posts and comments on the Facebook account of this local inspirational figure. The research data was taken from screenshots of other Facebook accounts and analyzed using a discourse analysis (DA) method. There are several aspects of discourse that must be considered: (a) text, it describes various authentic practices, socio-cultural and symbolic approaches of seeing things like captions on photos and videos; (b) context, all communicative situations related to context; (c) Action and interaction, the posts had the impact of real actions for various parties and led to social interaction.

Keywords: Discourse Analysis, Social Media, Facebook, Local's figure, Society 5.0

Introduction

Everyone has a different level of cognitive reading literacy. The scope of the term reading and writing literacy can cover a broader and more detailed direction. If it is related to the discourse that is read, in terms of the branch of linguistics, the entire content can be viewed from the side of discourse analysis (DA). Especially in today's digital era, whatever people write on social media has meaning, purpose, and context. This trend can be a positive impact if the post is useful for many people, but on the other hand, it will be harmful if the posts only rewrite about fake news (Hoax) they have read from sites whose truth cannot be accounted for. Therefore, it is essential for readers and writers on social media to think critically about what they read and write. So they can be beneficial to inspire many people and educate people consumed by fake news (Hoax).

Both news and science today can be accessed not only via Google, but also via several social media platforms, including Instagram, Telegram, Twitter, and Facebook. Owner of a social media account who has many followers, likes, and comments must be creative and innovative to maintain the existence of the social media account. Commonly, netizen are

interested in what is written contains information sought after by people, such as disaster information, contributions to aid donations, controversial life phenomena, politics, and the world of entrepreneurship. Absolutely, the account owners are also highlighted because their writings can describe their credibility as writers on their own accounts. Unconsciously, Their response in the comments' column may attract the attention of many netizen, whether the account owner responds to their followers politely or they get provoked by the criticism of netizen in the comments' column as the account owners are increasingly popular. It can be identified in words constructed in the comment column.

In social media, social backgrounds like age, position, level of education, economy, and culture cannot limit the social media users to comment freely on any posts of other people who are friends with them. All kinds of comments can be read together, and users can respond to each other. The phenomenon of critical posts and comments is fascinating to be investigated further because it contains text that generally provides opinions and data and the language features of the text itself and its relationship to context and others. The packaging of these words must be conveyed appropriately to online readers. People or netizen primarily focus on brief descriptions, heading, or titles that identify or introduce a document, graphic, photograph, or table. It consists of additional information available in the pictures, photos, or video. The term of these texts is called "caption." The owner of a well-known account must be able to package it all systematically; thus, their posts can attractively be read and responded to. Social media users must think ahead that almost all levels of society in every region in Indonesia are familiar with and get affected by gadgets or mobile phones. The credibility of the account owners can be seen from the way they connect their reading literacy with their writing skills. It becomes very significant because not everyone who is friends with him on social media also knows him closely in the real world.

The charm of the popularity of social media account owners who manage to catch the eyes of netizen comes from either large or small regions. This development also happens in one of the cities in West Nusa Tenggara, namely Bima City. One of the influencers is Julhaidin who is well-known in the "Rangga Babuju" community. The name "Rangga Babuju" is also used on his Facebook account, and Rangga Babuju's Facebook account has a fan page. One of the initial things that made this inspirational figure's Facebook account known by most people was his social activities of helping others.

Furthermore, he continued with his entrepreneurial activities, which were shared on social media and greatly inspired millennials to learn entrepreneurship. "Rangga Babuju" also takes part in disseminating his writings related to current viral issues locally or nationally. Moreover, his followers are entertained by his posts. His writings are arranged neatly and as uniquely as possible so that readers do not get bored with what he conveys. Another interesting point is that netizen use local and formal languages, or even slang, along with various responses in satire with criticism and jokes. Of course, it all depends on the content and context. Therefore, posts and comments in the discourse analysis frame on the social media accounts of the local inspirational figure "Rangga Babuju" be worth researching.

Theory and Method

Facebook, its users, and inspirational local figure

Facebook is one of social media has been operated in New Millenium 21st Centuries, specifically in 2004 (Baruah, 2012). Then, Facebook collaborates with various stakeholders for multiple types of partner programs and how the platform truly became a multi-sided platform, connecting app developers, advertisers, marketers, content producers, media, and local communities (Helmond et al., 2019). In Bima, West Nusa Tenggara, local communities take part in social life and they have community sense, social and psychological identity in

which involve communion of values, the sense of belonging, being engaged in the community events, bearing responsibility before the community, etc.). It motivates the formation of such qualities as solidarity, mutual trust and duties, communion of interests Filippov & Gassiy, 2004 in (Rykun et al., 2015). The name of facebook “Rangga Babuju” has been proved his dedication in the social environment. His posts which obtain many likes and comments have attracted people to participate in comments. Sometimes, they respond to each other about the current statement and it makes these posts so interactive. Pro and cons arguments are common activities in Facebook that trigger tension and awkwardness.

Mostly, netizen influence others to develop their beliefs and attitudes, or open their minds to different perspectives and viewpoints. Based on the previous research, nearly 20% of respondents, the Facebook argument can harm the relationship, either stable or temporarily. For example, some participants revealed that they have trouble because of different argument (Cionea, 2017).

Discourse Analysis

In this paper, the researcher identified that how the texts are engaged to influence people in facebook. As a semantic unit of language, text can be identified as a group of meaning, not of form. Texture is what provides the text with unity and distinguishes it from a non-text. Hence, it is the cohesive relation that exists between units of a text (Bahaziq, 2016). As social actors, communicator must be focused on personal and social cognition such as personal memories, knowledge and opinions, as well as those shared with members of the group or culture as a whole. Both types of cognition influence interaction and discourse of individual members, whereas shared “social representations” govern the collective actions of a group (Djik, n.d.). Leech & Short (in (Afifullah, 2018), discourse is described as linguistic communication seen as a transaction between speaker and listener, as an interpersonal activity whose form is determined by its social purpose. Text is linguistic communication (either spoken or written) seen simply as a message coded in its auditory and visual medium. Guedes et al. (2016) in (Triana et al., 2020) said that on one side, language is the main aspect of culture, while on the other side, norms and values are not separated from language but are formed through language. In this context, the activity of updating the status and commenting on the status of Facebook is a manifestation of socio-cultural practices.

Van Dijk (1997) in (Cerceva, n.d.) defines discourse analysis involves semantics, in which emphasized on the coherence and meaning of the general topic or native meaning of the text; syntactic, the layout of the sentence, and the format or general organization of the text are analyzed in specific; and stylistic, sometimes called rhetoric, which identify the use of devices such as metaphors or euphemisms, promises, and threats. There were several components utilized to analyze social media, including texts, contexts, actions and interactions, power and ideology (Jones, Chik and Hafner, 2015) in (Georgalou, 2016). These components can be explained as follow: (a) texts are any forms of communication encompassing written texts, spoken conversation, and other kinds of language signs which can play a significant role in connecting humans in the social interaction; (b) contexts are social and interactional situations in which people construct, receive, exchange, and adjust the texts; (c) actions and interactions are about how the text used by people for different purposes; (d) power and ideology illustrate the way people try to acquire their domination upon others by using the text constructed in particular intended settings.

Society 5.0 perspective

Technology has become the essential part of human life since we became society 5.0. The internet encourages the transformation of how information is exchanged and how we live (Mayasari, 2019 in Ellitan, 2020). This development can reduce the gap in economic and social sectors. In this sense, internet users should realize that the opportunities of using gadget have become common in their daily lives of modern society. Society 5.0 is closely connected with digital technology existing to fulfill a wide range of needs the digital community by allowing them to access the necessary goods and services. Due to this trend, humans can actively sustain their lives in comfortable ways as they can optimally take advantages of utilizing services regardless of their social backgrounds, Shiroishi, 2018 in (Suspendi & Nurjanah, 2019).

Method

The method used was qualitative research, specifically data were taken by collecting screenshot Rangga Babuju's facebook (personal and fan page) and analyzed using a discourse analysis (DA). Rangga Babuju's facebook was selected based on the greatest number of followers in Bima, West Nusa Tenggara.

Findings and Discussion

The data were taken from the Facebook account of Rangga Babuju posts which received a lot of responses from the netizen from Bima. The following explanations and screenshots of posts and comments were taken from Rangga Babuju's Facebook:

1. Picture 1 explains the meeting with PLN (State Electricity Company) related to the frequency of blackouts;
2. Picture 2 shows that Rangga Babuju is actively promoting Bima local products which are produced by MSMEs in Bima City and marketed at Perumda Bima Aneka;
3. Picture 3 explains about an expression of gratitude.
4. Picture 4 focuses on long captions and pictures about a viral issue. It is about someone's household problems that become public consumption. Rangga Babuju actively gives advice so that netizen do not blaspheme or talk about it continuously.

Figure 1. Meeting with PLN (State Electricity Company)

In his above post (picture 1), Rangga Babuju's account on facebook publishes the news released by KAHABA.NET through his official facebook account. Picture 1 has 1,648 likes, 45 comments and 53 shares. Data in picture 1 above can be analyzed based on discourse analysis aspect. Text, Rangga Babuju wrote in the caption of the news about a special meeting between the Babuju community and PLN. Visually, the post containing some photos published in online media as a form of evidence from the meeting. The purpose of the news on online media is to explain netizen the detailed and accurate information about the blackouts clearly. With the participation of the media covering this meeting, Rangga Babuju's post can be justified for its authenticity. In picture 1, Rangga did not write satire or negative expressions for PLN, instead, it encouraged the public to read the full results of its meeting with PLN in the article it shared.

The large number of netizen who clicked on the like icon on the post, wrote comments, and shared it shows their high attention to Rangga Babuju's post about the problem of rolling blackouts carried out by PLN of Bima City. Surely, the comments vary; some of them showed their understanding of the reasons for the blackout, and others still complained about being disappointed with the blackout as described in picture 1. Netizen who understood what the Babuju community was doing would express their appreciation to Rangga and his friends. However, the others also gave satire comments for the rolling blackouts done by PLN in Bima.

Context, it relates to participants or people who take part in interaction. It seems that Rangga Babuju on his Facebook share the data in picture 1 to readers (his friends and followers on his account facebook) who need the reason of problem they face about

blackouts. Hence, Rangga Babuju presents posts related to this problem. Netizen as participants also understand that they are consuming the post according to reality. Facebook is seen as a medium for someone to express themselves or communicate in a limited context (Pempek et al., 2009; Stieglitz & Dang-Xuan, 2013); Actions and interactions, it defines as what people do with texts and what they do with and to each other. 'People' were netizen who were interested in posts and express their thought in comments. Netizen are interactive in sharing arguments about this post. Positive comments were shown in the data, the netizen explained the information about what occurred in PLN.

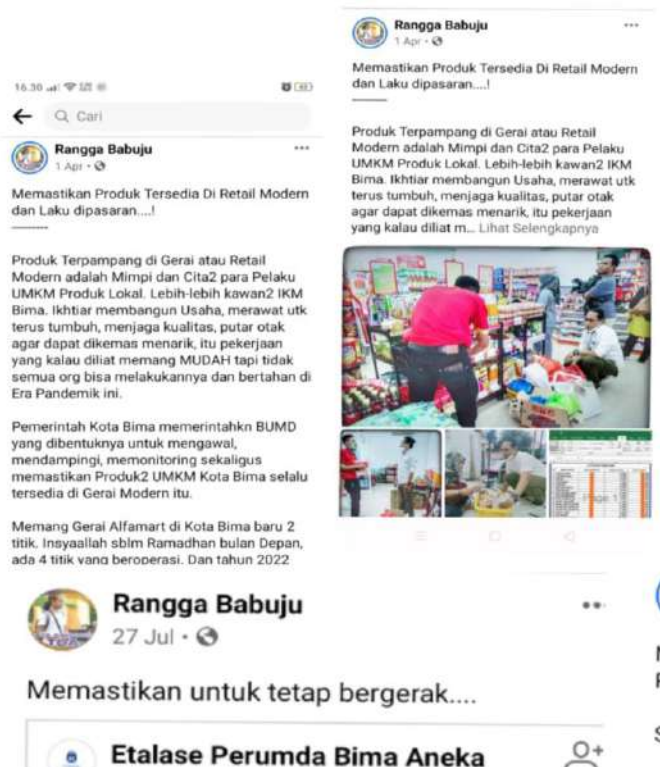

Figure 2. UMKM or MSMEs

Based on the data in picture 2, Rangga Babuju produced texts or caption here is the same expression in all three posts, namely the sentence *memastikan* (confirm) followed by photographs and reshare another account facebook related to the local product. As a director of BUMD Kota Bima, through his posts, he desires people follow his activities as a person who holds the trust as a leader. The word *memastikan* is repeated several times, meaning that the person is always monitoring everything related to his responsibilities. Figure 2. The caption *memastikan untuk tetap bergerak* (make sure to keep moving) and followed by the post from the Facebook account "Etalase Peruma Bima Aneka" which he shared has a related meaning. This means that the post contains important information such as the location, where the public can buy Bima local products and the opening hours or opening hours of the shop.

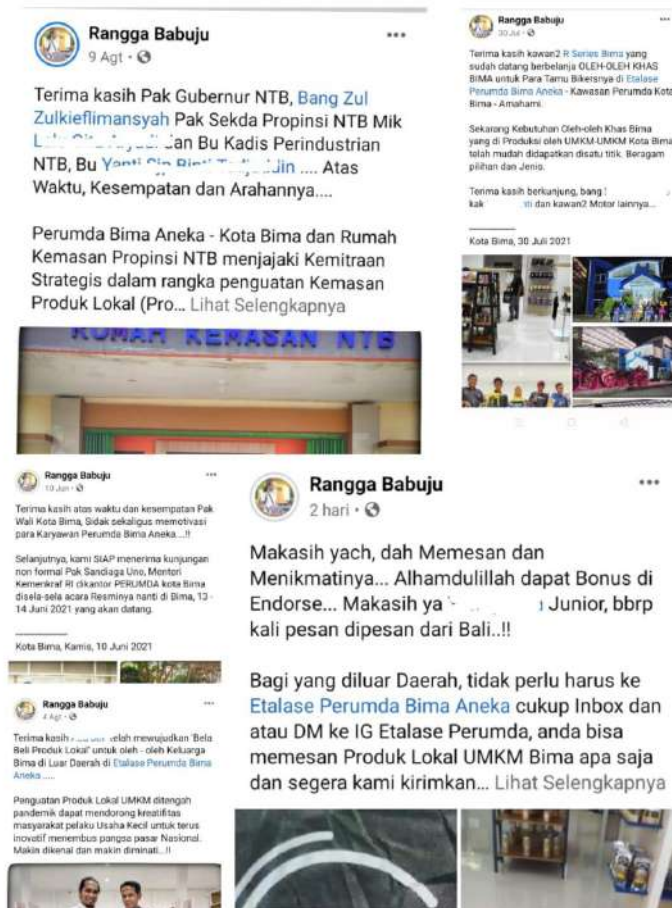

Figure 3. An expression of gratitude

The caption of data picture 3 contains core theme of masculinity, specifically leadership respect Tuncay (2006) in (Hamidah, 2016). It can be seen on how Rangga Babuju accept the visitors or consumers through the text he posts. He always writes expression of gratitude formally by saying *terima kasih* (thank you) to visitors or governments who visit tradeshow booth in which located on Perumda Bima Aneka, amahami, Kota Bima. However, sometimes, he writes expression of gratitude informally by saying *makasih* for the person that he has known well as a friend. Contextually, Rangga babuju identified the participants who take part in interaction by tagging several participants' facebook accounts. Extra-situational context is related to specific values. It referred to their involvement in particular communities (e.g. friendship/educational cohorts, hobby or interest groups, colleagues, fan communities) (Georgalou, 2016). Behavioral context can be shown on the pictures illustrated below the caption. Those pictures relate to physical situation specifically, the place of the interaction between Rangga Babuju and others.

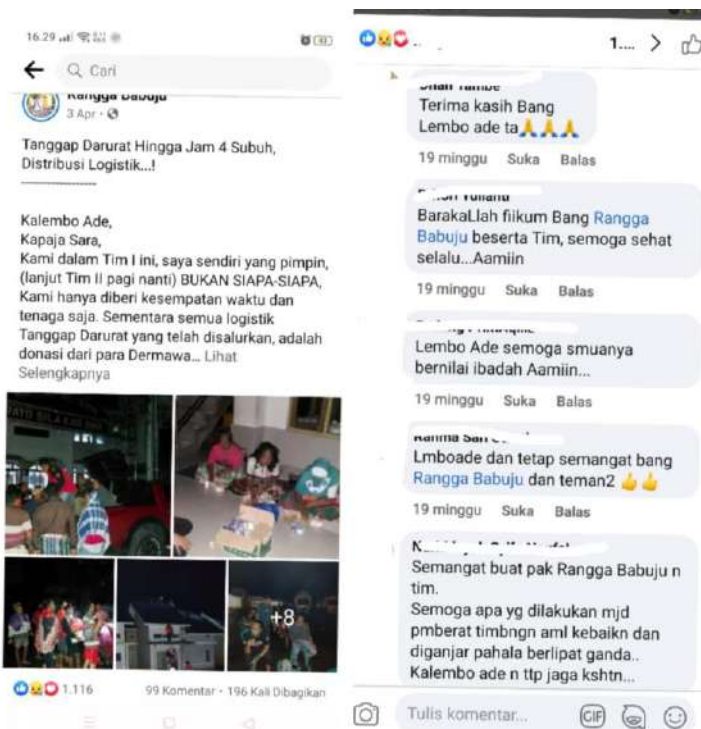

Figure 4. Emergency Response

Rangga Babuju wrote “Emergency Response Until 4 am, Logistics Distribution....!” (Emergency Response Until 4 AM, Logistics Distribution...!) These words are intended to inform readers or netizen that logistics distribution activities have taken place to disaster victims. Then, Rangga Babuju also wrote phrasal expressions related to social-cultural context. He said *kalembo ade*, and *kapaja sara*. *Kalembo ade* is a component of Mbojo linguistic system that he convinces to have several functions, i.e. to convey cultural values and to reflect the mind and customs of its speakers. In this sense, the expression has two functions, i.e. linguistic and cultural (Sahrain & Irawan, 2018). *Kapaja sara* means people must be more patience. In the modern era, *Kalembo ade* is more popular than *Kapaja Sara*. Mostly, Bimanese use *kalembo ade* to express condolences, apologies, thanksgivings, refusal, and so forth. Netizen who participated in the comments gave positive responses, namely support and they also conveyed *lembo ade* or *kalembo ade* for the team led by Rangga Babuju or Julhaidin himself.

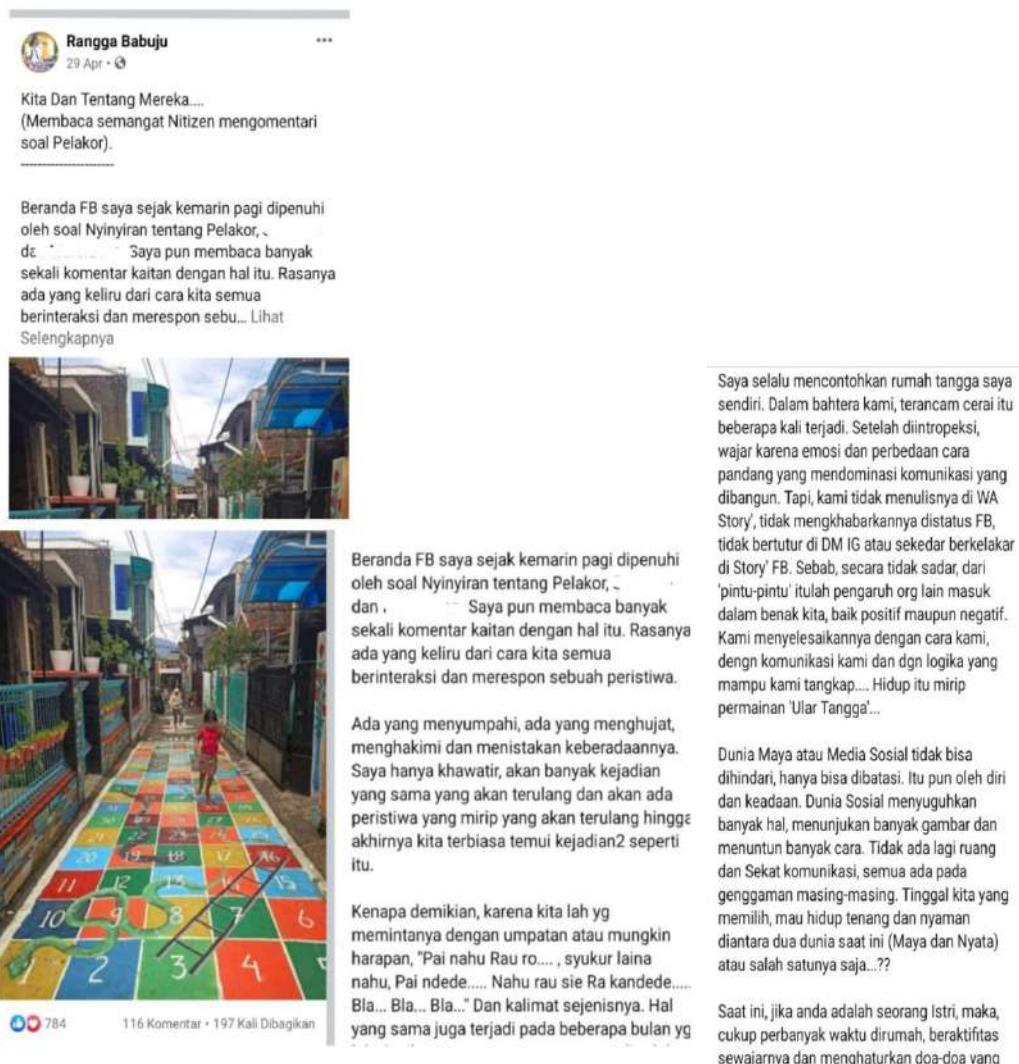

Figure 5. Viral issue

"Kita dan Tentang Mereka" (*Us and about them*) are interesting expression but, the reader or netizen must clearly identify that. The word *Us* in the text refer to exophoric reference in which requires the reader to infer the interpreted referent by looking beyond the text in the immediate environment shared by the reader and writer (Bahaziq, 2016). The word *them*, *them* is used to refer to the object of a clause. However, *them* refer to a noun not mentioned before. Its referent may be anything related to the outside world of the text that can be directly seen, or that is clearly known by the speaker/ writer and the receiver.

Rangga Babuju criticized netizen who responded excessively to an event to the point of blaspheming someone called *pelakor* (*Perebut laki orang*). He also explained that netizen expressed their hatred towards the *pelakor* by saying in Mbojo language *pai nahu rau ro* (If I were her), *syukur laina nahu pai ndede* (I feel grateful it does not happen to me). *Them* is used to refer to a married man (husband), a married woman (wife) and *pelakor*. *Pelakor* as a term is rhetorically unfair where the woman as a thief, an active agent, while positioning the man as an inactive person (Anatias, 2018). In this case, Rangga babuju has his own view about this term and provide advices to netizen in a short story about his household as an example to inspire others.

Conclusion

Social media users in society 5.0 should be more creative, innovative, and communicative in many aspects. In this era, if they can manage their mind, attitude and time, they potentially being a person who inspires others and give benefit to themselves as what have been done by Rangga babuju for recently years. The man who has many followers in his facebook account attracts the attention of netizen in Bima, West Nusa Tenggara. The result of this research showed the aspect of discourse analysis of Rangga babuju's posts on his facebook account involved text, context, action and interaction. The meaning of the texts produced by Rangga Babuju on his social media account is meaningful and accepted by readers. The language used of his post is aimed to inform, to educate, to promote, to share moment to others, e.g. Solidarity in disaster, social problem, viral story about life, and promotion local product in enhancing market of UMKM or Micro, Small, Medium Enterprises (MSMEs). The connectedness of texts is tight. His posts often obtain many kinds of comments because the topic provided by him are being discuss in the real life environment as a crucial problem or a viral issue. There was an exophoric reference of his posts, but netizen can understand about it. The contexts of his posts are limited to on participants, and extra-situational context. The action and interaction occur among readers and writers in comments.

Abstract

During covid-19 pandemic, students must study in online learning. It is practically challenging for teaching children so they need to explore many things. Therefore, being an autonomous learner is crucially needed. One of the limitations of children in non-English speaking countries when learning this language is insufficient exposure to the standardized English-speaking environment. As a consequence, children often encounter issues such as: incorrect pronunciation, slow listening and speaking reflexes, etc. The role of technology like online learning application nowadays really helps teachers and students overcome this problem. This study is aimed to explore the use of language learning application named *Monkey Stories* to support their online class, especially in studying English. A descriptive study was conducted to eighteen children in one of private English course. The data gained from questioner and interview showed that *monkey stories* helps students learn English and especially improve their vocabulary and pronunciations. Moreover, because it can be accessed anywhere and anytime, students can always learn English whenever they want to. Thus, it really supports students' online learning.

Keywords: Monkey stories; English; online learning

Introduction

Teaching children as young learners during covid-19 pandemic is practically challenging as they are used to have face to face teaching and learning process. Thus, teachers need more efforts to minimize the problems faced by the students. Then, online learning is chosen as a way in teaching and learning process. It required an internet network which carried out at the same time but in different places by teacher and students. However, industrial revolution 4.0 provides digital media for online learning which helps teacher and students in teaching and learning process. Digital media here refers to technology or content that is consumed through a machine-readable platform. Digital media also can be defined as technologies that people use to connect with one another—including mobile phones, personal digital assistants (PDAs), game consoles, and computers connected to the Internet.

Nowdays, digital media provides many applications that can be accessed and downloaded to help students in learning English, one of them is *Monkey Stories*. It is a digital book which is intentionally provided and created for children. Thus, this article presented how monkey stories helps the young learners in improving their vocabularies and pronunciation ability.

Theory and method

Why Teach English to young Children?

There are some considerations in teaching English for young children; Cooper (2007) stated that the children find it easy to accept a new linguistic code because they are still learning their own, they also find it easy to pronounce the new sounds for the same reason. Then, they don't feel self-conscious about sounding different and the last, if they have a good experience of learning a language at this age, they will remember it with fondness, so will find it easier to learn languages in life.

Teaching languages to young children has long-term educational aims such as to encourage open-mindedness by preparing the child for understanding and tolerance of different ways of thinking and learning; to help to improve cognitive development by offering a further instrument for organizing knowledge; to encourage greater creativity as a consequence of a constant comparison between two different linguistic codes and to lay the foundations for continuous linguistic education, allowing the formation of a type of education that is not exclusively centred on one's own mother tongue and that leads to an easier study of foreign languages at higher school levels

Advice for Teaching English to young children

There are some devices that can be written as follows:

- The emphasis should be on listening and speaking the language, see below for comments on reading and writing.
- Relate what you teach to what they already know in their own language; don't use the new language as the basis for teaching new concepts.
- Use as much English as possible, talk to them all the time, so that the children hear as much as possible. This gives them more opportunity to begin to understand the language and absorb its rhythm.
- Your first aim should be that the children understand the language they are being taught.
- Allow the children to respond in their first language, then repeat back to them in English what they said.
- Once they understand, then you should aim for them to produce the language.
- Start with simple vocabulary: just words, not sentences.
- Go slowly, with much repetition, to give the children as much opportunity as possible to really learn; there's no rush.
- Gradually introduce sentences, when the children are ready, always making sure the children understand the language.
- The lessons must be fun! The most important thing is that the children enjoy the lessons; the children will not learn if they do not enjoy the lessons and the children's motivation to learn is in order to participate in the lessons.
- Have a routine, so the children know what to expect and feel comfortable in the lessons.
- Start each lesson with a visual signal, to show the children that it's now the time when another language is spoken.
- Use body language, facial expressions and visual aids to make yourself understood; do not resort to translation!
- Use lots and lots of visual aids; the more visual the better, so the children have a chance to understand even before they know the words.
- Use games, to involve the children and make it fun.

- Use songs, because through these, the children learn vocabulary, grammar and the rhythm of the language without trying.
- Use stories, because the children love them and it gives them a real experience of the language.
- Use short activities, to keep the children attentive.
- Use active activities, to change the rhythm of the lesson, to keep them attentive, to stop them fidgeting.
- End the lesson with a quiet activity, to calm the children down for their next lesson.
- Speak in English as much as possible (all the time, if practical!). This allows the children to get used to the rhythm of the language and to pick up some words without really trying.
- Use the children's first language only when necessary, for example, to explain a game or for discipline purposes.

Monkey stories

Monkey stories is an application that can be downloaded in apps or play store. It is in a digital book form consists of stories that can be used to teach children language. This method is used in the education systems of many developed countries, such as the US, the UK, Germany and Australia. This method brings various benefits to children during the process of learning languages:

- Knowledge and skills children need are systematically introduced and tailored for each child's attention span and receptive ability.
- Children will acquire knowledge and apply what they have learned through reading stories.
- Thanks to the interactive picture stories, children become more engaged in their lessons.
- Lesson-based activities are more diverse and interesting than those used by conventional language teaching methods.

Strictly following the American Common Core State Standard (CCSS), Monkey Stories has built more than 100 guided lessons that aim to help children develop important skills suitable for each age group listed in the CCSS.

- Understand English grammar and know how to use it in writing and speaking
- Use vocabulary correctly in writing
- Analyze a sentence, paragraph or scenario to guess the meaning of a new word
- Recognize word forms and structures
- Use single words, compound words and sentences correctly.
- Develop reading comprehension skills, including understanding the story, the word forms and the sentence structures used in the story, and comparing what they learned in previous lessons with the new lesson.

Furthermore, Monkey Stories builds diverse lessons that are tailored for each child's age group. All activities are instructed in English and are designed to let children play to learn, which helps them engage, enjoy learning English and eventually use English naturally. Monkey Stories' guided lesson are similar to those used in the classroom, guaranteeing that children will not only be more interested in learning English, but also develop essential skills for higher English levels.

Monkey stories provides some types of lesson.

1. Pre-reading

Children will learn:

- Key vocabulary and sentence structures used in a story
- How to pronounce new words from native speakers
- High frequency words used in the story
- How to guess story content and characters from looking at the story cover.

2. While reading

There are two important skills that children will develop through reading stories:
- **Associative learning skills:** Lively illustration is one of the key elements in helping children understand the story, as well as stimulate associative learning ability while creating a fun and exciting learning experience.

- **Inference skills:** While reading stories, children learn to incorporate their real-life knowledge into specific situations in a story to infer and thus understand the story without assistance from their native language. Once they know how to infer and use logic when reading stories, children easily apply to real life what they have learned. Thanks to pre-reading activities, including introduction to vocabulary and structures, along with lively illustration, children will practice and develop these important skills.

3. Post-reading

Children will learn sentence structures used in a story; and practice reading comprehension skills: identifying main characters, setting, main content and lesson in a story; answering questions related to the story; making associations between what they already know and what they have read in the story. These activities help children gain in-depth understanding of the story, memorize the content and develop critical thinking ability.

There is a direct correlation between the number of words children hear and how fast they read and understand new ones. Children love listening to stories that are read by their parents. Unfortunately, not all parents have time to read to their children on a regular basis. Monkey Stories audiobooks are created to help parents solve this problem: letting children listen to stories anytime and anywhere. Audiobooks on Monkey Stories have lively sound effects, music and multiple narrators that are not only fun, but also stimulate children's imagination. Moreover, audiobooks can be played even when the device is on screensaver mode.

Here some highlighted benefits children receive from Monkey Stories audiobooks:

- Developing listening skills and stretching attention span
- Developing a sense of narrative structure and understanding of language
- Learning new vocabulary and syntax
- Stimulating and expanding imagination and visualization
- Building interest in literature, history and other subjects

Using Monkey Stories, children can listen to the best audiobooks with beautiful voice and lively soundtracks, with new audiobooks and series updated regularly.

Method

This is a qualitative study and the study is all about exploring issues, understanding the phenomena of using new digital media, and answering questions aims to gather an in-depth understanding of human behavior and the reasons that govern such behavior. Descriptive qualitative design was used to describe and interpret students' experiences to determine the

meaning of their experiences of each in their learning participation and to explore students' experiences to develop detailed understanding of central phenomena (Creswell, 2012:16). The object of the research is Young Children in one of privat kindergarten in Majennag who which applied Monkey stories.

Findings and Discussion

English is known as a universal language so it is important for children to learn it. In addition to making it easier for children to communicate with people who speak foreign languages, English is also used when children want to continue their education abroad.

Language skills are also good for increasing children's intelligence. In social interactions, English is also often used. In order to be able to follow English lessons well, many parents today are starting to introduce English from their children's daily lives, such as from cartoons, songs, story books and gadget applications.

An application called Monkey Stories has become a trend during this pandemic because it can teach children English as well as an American accent without having to go abroad to learn it. As stated at Popmama.com Monkey Stories application is as a way of learning English for children that is currently trending.

1. Monkey Stories app helps children who are not in an English speaking environment

What is Monkey Stories? Monkey Stories application is a complete application that teaches children to listen, speak, read and write in English and is intended for children 2-10 years. One of the limitations of children in non-English speaking countries when learning this language is the lack of a standardized English-speaking environment. As a result, children often face problems such as: mispronunciation, slow hearing and imprecise speech reflexes, and others. On the other hand, courses with native English-speaking teachers are often not chosen because of the high cost, especially for families with many children. The learning methods provided by 'Monkey Stories' deal with most of these problems. All audio in the app is recorded by native speakers and rated by leading US language experts. The cost of studying with this application is known to be more affordable for most families. Children can learn flexibly anytime, anywhere, on different devices such as mobile phones, computers or tablets. (Respondent 2,5,7 and 9)

2. Helping children practice American pronunciation and access training in children. The Monkey Stories application developed by Early Start Co.,LTD is the most downloaded English learning application because it is considered to have made a big change in the learning habits of children aged 2-10 years in Indonesia and Thailand. By creating a daily environment that focuses on standard English. In addition, the Monkey Phonics module of the Monkey Stories application also helps children practice English pronunciation from an early age. This application also became popular after providing benefits to children, such as providing American accent training to children without going abroad, as well as providing children with various kinds of content from thousands of stories, which are updated for free every week and so on. In addition, this application with 1 million users worldwide creates a trend that encourages children to learn English at home accompanied by their parents during the Covid-19 pandemic.
3. Applying the Phonics method that helps children read new words in English. This application applies the Phonics method which is popular in many developed countries in the world such as the United States and Canada, so Monkey Phonics is the first standard English spelling learning module in the form of a mobile

application for children around the world. In no time, the Monkey Phonics module helps children to be able to read new words in English, even though they have never been taught these words. Besides Monkey Phonics, the Monkey Stories app has 3 other programs: Stories, Lessons & Audiobooks, which were developed by experts from America to help children develop 4 English skills comprehensively, including listening, speaking, reading, and writing. Each lesson of the program is designed with clear graphics and sound, as well as interactive educational games that allow children to learn while playing. In addition, this application also has a collection of more than 1,000 stories, 300 lessons & 200 audiobooks categorized by class to accommodate all levels of children's English, as well as providing new free lessons uploaded every week.

4. Some parental reviews of children who use the Monkey Stories application
According to a review from one parent of a child who uses this application, he said that his child experienced an increase in pronunciation. "Even my son's teacher was surprised by the improvement in his pronunciation. After two months he was able to speak longer sentences and became more confident in speaking English overall".

However, the procedure used is also adjustable for any level of language students. The concept of digital media language learning is in the formative phase and is still being shaped by the emerging socio-technical landscape of web 2.0 tools. It has great potential for encouraging student independence and developing intercultural and communicative skills. Below is a check list design that the writer uses for starting a new social network learning group.

1. Create compatible groups. Build a profile of the participants such as: the subject the students want to learn; the level of ability; learning objectives; interests; learning styles; willingness to participate.
2. Select the most appropriate medium and tools.
3. Provide a clear introduction and agree the rules of engagement • Give an introduction at the beginning of the course: in what language communication is to take place; how the course will be structured – that is by time, by topics or by some other method; the rules and restrictions of the social network; the role of the moderator; participants' rights and responsibilities; how much group and how much individual work will be expected; how much work will be on-line and off-line; when and how often does the group meet on-line. The content of each session Journal of English Language and Culture – Vol. 6 No. 1 January 2016 81 • Ask students to introduce themselves in a discussion forum. In the basic level, students could do this in their native language initially, to replace it at a later stage with a description in the target language. In fact, that could be their first aim.
4. Set goals. Students should set group and individual group. All students should share in creating group goals. Teacher as a moderator must ensure that goals are well defined, realistic and achievable; also that enough time is allocated to achieve them.
5. Encourage team working Students should understand each other's goals and styles and be open to resolving conflicts. Simple tasks or games are a good way of becoming acquainted. Agree the rules (and possible roles) within the team. Another way to think of this is establishing rights and responsibilities.
6. Listen actively, participate, and provide momentum if necessary:

- Have tasks in mind during online sessions and consider giving homework assignments.
 - Listen carefully without interrupting.
 - Ask questions from time to time.
 - Add some examples from your personal life – it gives more personal contact.
 - Lead some discussions but not all of them.
 - Express your own opinions about the topics
 - Manage silence.
 - Learn to recognise, use and deal with silences.
 - Allow silences when students need time to formulate their thoughts and find the right words. \
7. Fix problems, recognise and solve conflicts. Although moderating seems to be less authoritative than teaching, language course moderators on a social network should deal with those that are not following the rules. This may mean reminding students about the rights of participants, warning or even punishing repeat offenders.
8. Evaluate
- Check for and give feedback.
 - Ask if your support was enough or appropriate.
 - At agreed intervals or at the end of a round of social network encounters surveys could be sent or made available online so that students can evaluate the course, the learning environment and the moderator.
9. Adapt
- Suggest other tools to be used.
 - Make improvements to your own performance as well as the course and the environment.

Conclusion

This result showed that the use of language learning application named *Monkey Stories* supported their online class, especially in studying English. A descriptive study was conducted to eighteen children in one of private English course. The data gained from questioner and interview showed that *monkey stories* help students learn English and especially improve their vocabulary and pronunciations. Moreover, because it can be accessed anywhere and anytime, students can always learn English whenever they want to. Thus, it really supports students' online learning.

Abstract

This study aims at scrutinizing gender role and attitude of English Department Students in Online Class Discussion. This research mainly uncovers the questions related to the difference and causes on gender role and attitude of students in Online Class. The data qualitatively analyzed by listing, naming, categorizing, and determining the answer of research questions based on the theory related including the students' responses and interactions in online class discussion. The researchers collect data through questionnaire, observation and interview. The researchers observe online discussion in three classes on WhatsApp Group. There are 110 students of English department of IAIN Kediri fill out an online questionnaire. To get the data dealing with students' attitude towards the use of English in different texting style while online discussion, ten students of five males and five females interviewed. The results show that there are some differences between e-discourse used by male and female students in online class discussion.

Keyword: Gender role, attitude, online class

Introduction

(Leaper & Smith 2004) as cited in (Keong et al., 2012) stated that many previous researches have revealed that gender affects in online interaction. (Rafi 2008) as cited in (Keong et al., 2012) stated that the attitude between males and females are different, females are more conversational and use their expression to explain their emotion than males. Other studies showed that during online conversation, females tend to write longer and lexically complex messages than males. Males are more concise to express their thoughts through SMS texts. (Keong et al., 2012) showed that males write shorter than females, if those females are comfortable during online interaction as they interact face to face. (Beckmann & Weberr, 2016; Johnson, 2016; Ozcan & Hacer, 2013; Wegmann & McCauley, 2014; Weil, McGuigan, & Kern, 2011; Yiadom-Boayke, 2011) as cited in (wang, 2019) said that Online discussion supplied platform where students can learn in social environment. Student can engage one another, conveying thought, draw up assumptions, conferring, and humanly formulate knowledge.

Feldman (1996) as cited in (K. Korir & C. Laigong, 2014) mentioned that gender role can be described as the collection of expectations that defined by society which imply proper manners for males and females. Besides, attitude is the collection of conviction and encouragement that be reasons to do something (K. Korir & C. Laigong, 2014).

The research aimed to answer research questions, as follows:

1. What is gender role in shaping student's texting style in online class discussion?
2. What is the student's attitude toward the using of English in different texting style related to discussion in online class?

On previous study, it was found that Female groups had considerably sent extra messages than groups of male, female's online existence somehow boosted messages from

males while the existence of males decrease writing in females (J. Bostock & Lizhi, 2005). On other hand, other research found that gender differences had no significant influence in the measures of participation (frequency of online postings) between males and females (Miller & Durndell, 2004). The data collected in this research focused on the analysis of English Department Students in Online Class Discussion. The researchers collected data through questionnaire, observation and interview. The researchers observed online discussion in three classes, two classes of Grammar and one Linguistic class on WhatsApp Group. There were 110 students of English department of IAIN Kediri filled out an online questionnaire, which showed their data of gender identity based on their style of text messaging in online class discussion. To get the data dealing with students' attitude towards the use of English in different texting style while online discussion, ten students of five males and five females interviewed.

Theory and Method

Theory

a. Gender

Individual's expectations and values that affected by their social surroundings (Thums et al., 2020). It can be their status of economic, culture, experiences by reading, also gender roles and culture stereotypes focusing on specific academic area and job occupations (Becker and McElvany 2018; Möller and Schiefele 2004) in (Thums et al., 2020). (Boehnke, 2011; Kessler & McKenna, 1978; Lindsey, 2011) cited in (Oroujlou & Vahedi, 2011) said that gender role can be defined as individual's behavior that being expected based on sex and it contains other elements like interests, skills, activities, and clothing (Kessler & McKenna, 1978) cited in (Oroujlou & Vahedi, 2011). Gender differences were discovered in use of many of the stylistic variables, which males tend to convey language authorized and to react in negative ways in communication. Besides, females use expression of agree in explicit way and create more emotional and personal interaction styles (Guiller & Durndell, 2006).

b. Attitude

Attitude is psychology circumstances that is usually can be seen in people's action or behavior (Kartomiharjo, 1988) as cited in (Amin, 2020).

c. Online discussion

Online discussion forum is application that can gather people to convey message in discussion chat, communicate, receives feedback from other people it can be from other students or the instructors that can create better understanding about topic that being discussed (H. Biryai & V. Thomas, 2014).

Methodology

To follow up the study on investigating gender roles and attitude in students' online discussion, observation on students' online class discussion, questionnaire and interview carried out to obtain the data. The participants who participated on this study were 110 students in English Department of IAIN Kediri that has chosen randomly. Of the 100 participants, 65.5% (n=72) were female students, and 34.5% (n=38) were male students.

Students were informed the purpose of this study. The researchers analyzed students' forum of online class discussion as long one semester in 2021 school year by using WhatsApp application. Students' texting style in online discussion analyzed based on their

gender to know the gender roles in shaping students texting style in online class discussion. (20) Questions of an online questionnaire about gender's attitude toward the use of texting style and its differences were already filled by (110) students of English Department of IAIN Kediri. The students provided their data of gender identity and filled the questionnaire honestly based on their style of text messaging in online class discussion. To support the data (10) Students from the participants which consisted of five female students and 5 male students were chosen randomly to be interviewed about their attitude toward the using of English in different texting style related to online class discussion. The study was conducted based on coding of e-discourse used by (Lyddy et al., 2014) (AbuSa'aleek, 2015). Nine categories have been adopted to analyze the natural corpus of the study: Shortening, Clipping, Contraction, Unconventional spelling, Word-Letter Replacement, Word-digit replacement, Word combination, Initialisms, Emoticons.

Results and Discussion

Chat room of students' online class discussion by using WhatsApp application has analyzed to know students texting style. It found that students have variety styles of text messaging. The table below presents the variations of texting style used by students.

Table 1. variety of texting style used by students in online class discussion

[illegible]

	Male	E.g Etc	Example Etcetera
Unconventional Spelling	Female	Ur Thnk Lil	Your Thank Little
	Male	Ur Thnk Lil	Your Thank Little
Word-Letter Replacement	Female	U	You
	Male	-	-
Word-Digit Replacement	Female	-	-
	Male	4	For
Word-Combination	Female	Wanna Lemme	Want to Let me
	Male	Wanna Gimme Gonna	Want to Give me Going to
Initialisms	Female	OMG	Oh My God
		WBLR	Work Based Learning
		CMIW	Correct Me If I'm Wrong
		ASAP	As soon as possible
		HOTS	Higher Order of Thinking Skill
		LOTS	Lower Order of Thinking Skill
		LD	Learning Disability
		TOEFL	Test of English as Foreign Language
		SPSS	Statistical Package for The Social Science

	Male	CMIW	Correct Me If I'm Wrong
		HOTS	Higher Order of Thinking Skill
		LOTS	Lower Order of Thinking Skill
		LD	Learning Disability
		TOEFL	Test of English as Foreign Language
		SPSS	Statistical Package for The Social Science
Emoticons	Female	-	-
	Male	:v :/	Happy Annoyed
Others: Slang	Female	Wanna Lemme	Want to Let me
	Male	Wanna Gimme Gonna	Want to Give me Going to
	Female	5w+1h	What, where, why, when. who, and how
	Male	-	-
	Female	Maam	Ma'am
	Male	Maam	Ma'am
Numeric	Female	5w+1h	What, where, why, when. who, and how
	Male	-	-
Lack of punctuation	Female	Maam	Ma'am
	Male	Maam	Ma'am

Table 1 showed variety style of text messaging used by students in online class discussion. E-discourse generally consisted of some characteristics of interactive online communication. Shortening, clipping, contractions, unconventional spelling, word letter replacement, word digit replacement, word combination, initialisms, emoticons which added by slang, numeric, and lack of punctuation were identified by the researcher to conduct the study. The following descriptions represent results of e-discourse features used by students in online class discussion.

- a. Shortening used in students online discussion

(Thurlow, 2003) defined shortening as dropping a final letter or letters of a word. The existence of shortening in student's online class discussion has to be approved. There were lots of shortening found in students online class discussion. The results of questionnaire data showed that 14.5% were strongly agree to use shortening as their texting style, 59.1% were agree, besides, 21.8% students stated that they were disagree to use shortening as their texting style, and 1.6 % students stated that they were strongly disagree to use shortening as their texting style.

b. Clippings used in students online discussion

Clippings defined as the drop of final or initial letters of a word. Clippings have been existed in e-discourse. Lot of students used clippings as their style of text messaging. The results of questionnaire data showed that 3.65% students were strongly agree to use clippings as their texting style, 40% students were agree, on other hand, 52.7% students stated that they were disagree to use clippings as their texting style, and 3.65% students stated that they were strongly disagree to use clippings as their texting style.

c. Contractions used in students online discussion

Contractions means types of word shortened. It includes vowels dropping of the word. The results of questionnaire data displayed that 21.8% students were strongly agree to use contractions as their texting style, 66.4% students stated that they were agree to use contractions as their texting style, while 10.9% students were disagree to use contractions and 0.9% students stated that they were strongly disagree to use contractions as their texting style.

d. Unconventional spelling used in students online discussion

Unconventional spelling refers to non-standard spelling of target word. It refers to word which written as it sounds but in not standard spelling. The results of questionnaire revealed that 6.4% students were strongly agree and feel enjoy to use unconventional spelling as their texting style, 32.7% students were agree, while 46.4% students stated that they were disagree to use unconventional spelling as their texting style, and 14.5 % students were strongly disagree feel enjoy to use unconventional spelling as their texting style.

e. Word-letter replacement used in students online discussion

Word letter replacement defined as replacing word by single letter. This category always becomes important features found in students' e-discourse. The results of questionnaire data demonstrated that 17.3% students stated that they were strongly agree and enjoy using word-letter replacement as their texting style, 47.3% students were agree. On other hand, 30.9% students were disagree in using word-letter replacement as their texting style, and 4.5% students stated that they were strongly disagree and dislike in using word-letter replacement as their texting style.

f. Word digit replacement used in students online discussion

Word digit replacement defined as replacing word by digit. Word digit replacement used to replace a word that has identical pronunciation. The results of questionnaire data showed that 5.4% students stated that they were strongly agree and enjoy using word-digit replacement as their texting style, 34.5% students were agree,

while 54.5% students were disagree, and 6.4% students stated that they were strongly disagree and dislike in using word-digit replacement as their texting style.

g. Word combination used in students online discussion

Word combination defined as accent stylization of informal language. Word combination also refers to informal speech of phonological approximation. The results of questionnaire data described that 4.6% students stated that they were strongly agree and enjoy using word-combination as their texting style, 31.8% students were agree, while 52.7% students stated that they were disagree and 10.9% students stated that they were strongly disagree and dislike using word-combination as their texting style.

h. Initialisms used in students online discussion

Initialisms defined as initial of each word. Initialisms usually used by students frequently in online discussion as their style of text messaging. The results of questionnaire data presented that 13.6% students stated that they were strongly agree and enjoy using initialisms as their texting style, 58.2% students were agree, on other hand, 25.5% students stated that they are disagree, and 2.7% students stated that they are strongly disagree and dislike using initialisms as their texting style.

i. Emoticon used in students online discussion

Emoticon refers to typographic codes used to convey feeling. Emoticon used to convey response and reactions such as smiling, crying, sadness, and etc. The results of questionnaire data showed that 45.5% students stated that they were strongly agree and interested in using emoticons as their texting style, 44.5% students were agree, while 8.2% students stated that they were disagree, and 1.8% students stated that they were strongly disagree and no interested using emoticons as their texting style.

j. Slang, numeric, and lack of punctuation used in students online discussion

Various slang, numeric and lack of punctuation found in student's online discussion. The results of questionnaire data showed that 10% students stated that they were strongly agree and interested using emoticons as their texting style, 50% students stated that they were agree, 31.8% students stated that they were disagree and no interested using emoticons, and 8.2% students stated that they were strongly disagree and no interested using emoticons as their texting style.

The following table shows the percentage of e-discourse features used by students

Category of E-Discourse	Male	Female
Shortening	60%	40%
Clippings	100%	40%
Contractions	80%	60%
Unconventional Spelling	100%	60%
Word-Letter Replacement	60%	60%
Word-Digit Replacement	40%	40%
Word-Combination	0%	40%

Initialisms	100%	0%
Emoticons	100%	60%
Others: Slang, numeric, lack of punctuation	80%	40%

Table 2 presented that the use of E-Discourse features by male and female students. 60% male students gave a positive attitude towards the use of shortening in online class discussion. They stated that the use of shortening in online discussion did not reduce their understanding in discussion. Meanwhile female students gave a negative attitude toward the use of shortening in online discussion. They stated that the use of shortening in online class discussion could reduce their understanding and make them lose focus.

All male students gave a positive attitude towards the use of clippings in online class discussion. They stated that the use of clippings in online class discussion because it does not reduce their understanding in discussion. Meanwhile, female students gave negative responds toward the use of clippings because some reasons. They felt confused and could not understand the text well. Male students gave a positive attitude toward the use of contraction; meanwhile female students gave a negative attitude toward the use of contraction because it could reduce their understanding. Both of male and female students gave positive responds toward the use of unconventional spelling. They stated that they can understand the discussion even there was unconventional spelling. Male and female students gave a positive attitude toward the use of Word-Letter Replacement. They stated that the use of Word-Letter Replacement does not interfere their understanding. The use of Word-Digit Replacement in online discussion gets a bad respond from both of male and female students. They stated that the use of Word-Digit Replacement interfere their understanding in online discussion. The use of Word-combination in online discussion also gets a bad respond from both of male and female students. They stated that the use of Word-combination interfere their understanding in online discussion. The use of initialisms in online class discussion get a contra responds from male and female students. Male students gave positive responds toward the use of initialisms; meanwhile female students gave negative responds. Female students stated that initialisms could interfere their understanding in online discussion. Both of male and female students gave positive responds toward the use of emoticons. They stated that various emoticons in online discussion could make discussion becomes interesting. The use of slang, numeric, and lack of punctuation in online class discussion also get a contra responds from male and female students. Male students gave positive responds toward the use of slang, numeric, and lack of punctuation, meanwhile female students gave negative responds. Female students stated that, numeric, and lack of punctuation could interfere their understanding in online discussion.

Discussion

Gender roles and attitude towards the use of texting style in online class discussion becomes an area to be brought in this study. (Rafi 2008) as cited in (Keong et al., 2012) found that attitude between males and females are different. Rafi stated that females are more conversational and use their expression to explain their emotion than males. Other studies showed that during online conversation, females tend to write longer and lexically complex messages than males. Males are more concise to express their thoughts through SMS texts.

(Keong et al., 2012) showed that males write shorter than females, if those females are comfortable during online interaction as they interact face to face. Findings of this study found that gender influence students texting style in online discussion. Female students tend to use more variable texting style than male students. Female students are more expressive in pouring their emotion through their text than male students. In other hand, male students tend to use simpler sentence than female students. Male and female students have different characteristics in using E-Discourse features. Male students tend to use shortening, clippings, contractions, unconventional spelling, word-letter replacement, initialisms, emoticons, slang, numeric, and lack of punctuation. Meanwhile female students tend to avoid the use of E-Discourse features in online class discussion. Nevertheless, female students also used some E-Discourse features in online class discussion such as contractions, unconventional spelling, word-letter replacement, and emoticons.

Conclusion

Gender creates differences between male and female's texting style in online discussion. E-communication of English use makes variety of e-discourse categories in communication. Shortening, contractions, unconventional spelling, word-letter replacement, initialisms, emoticons, slang, numeric, and lack of punctuation more often to be used by students than clippings, word-digit replacement, and word combination. In the using of e-discourse features, male and females students have different characteristics. Male students tend to use more variety of e-discourse features than female students. In other hand, female students tend to avoid the use of e-discourse features in online discussion. Male students tend to use shortening, clippings, contractions, unconventional spelling, word-letter replacement, initialisms, emoticons, slang, numeric, and lack of punctuation. Meanwhile, female students only used some E-Discourse features in online class discussion such as contractions, unconventional spelling, word-letter replacement, and emoticons.

The results show that there are some differences between e-discourse used by male and female students in online class discussion. In summing up, gender affects student's texting style in online interaction of class discussion. Male students tend to ignore the use of standard language in online discussion. They liked to use more e-discourse features in online discussion and give positive attitude towards the use of e-discourse in online discussion. Meanwhile, female students tend to avoid the use of e-discourse features in online discussion. They liked to use standard language than use e-discourse features. Even though female students use more variety of e-discourse features in their online class discussion, but it is not as much as male students.

Indirect Speech Act in Texting Through Whatsapp by Dating Relationship Couple

Siti Isma Sari Lubis¹
ismasarilubis@gmail.com¹

University of Aupa Royhan¹

Abstract

Man and woman tend to have the close communication between them. Therefore, concepts of dating relationship is a usual thing that happens in the society especially for early adulthood. In doing the relationship, both male and female will always have the intents communication between them. The communication that they have is not always be done by face to face but also through social media. One of the popular media social that used by many people today is WhatsApp. This media social allow the user to text, call, and video call. Even it is also has the news feed that everyone can share their photos, video, or status. This research tried to found whether female or male that often use indirect speech act in their communication through WhatsApp while texting their couple. This paper try to analyse indirect speech act between female and male who involve in dating relationship through their WhatsApp texting. The participants of this research are three couples who use WhatsApp in doing communication. Their ages is 20-25 years old. The data was collected by documentations the message history of them in two weeks. Analyzing the data was done by categorizing it into direct and indirect speech act based on Clark (1977). It had found that female use indirect speech act more often than male. Based on three chat history found that there are ten indirect speech acts that delivered the females of three couples and only three indirect speech acts by the male.

Keywords: Indirect Speech Act, Texting, Dating Relationship

Introduction

Man and woman tend to have the close communication between them. Therefore concepts of dating relationship is a usual thing that happens in the society especially for the early adulthood. According to Ericson, every individual should face the phase of growing. It is about a close relationship with his/her opposite sex (Papalia, Olds, & Feedman, 2009). When they have this phase, individuals disposed a romantic relation that many people called is as dating relationship (Santrock, 2003).

While doing the communication, the sentence that are delivered by men is arranged well and brief than female. (Allan & Barbara, 2012). Casually they just give a simple introduction then explain it simply and give the conclusion. It is easy to be understood and get the point of what they want to be delivered. It is contrary with the females which tends to be complex (Allan & Barbara, 2012). In same situation, more than one topic can be conveyed by them. (Allan & Barbara, 2012) When they want to express what they want, it is often expressed in the different way of male do. For example while female want to tell that she wants to buy a bag to another male of even female. It could be possible that she talk about the leather of the bag then make the topic of the leather. Perhaps that the leathers of the bag that she want to buy is snake leather, she can change the topic about the snake, then talk about the

snake and its kind in the world. That is certainly different from the first she wants to speak up in the beginning while it is happen in the same time or situation.

The speaking ability of the females is in left front side of the brain and added by a small area in the right side. That is why female is better in doing communication than Male because they have two side area of speaking while male only have one (Allan & Barbara, 2012). It is also probably that the female can do two activities in the same way and also do an activities and speaking in the same time.

In doing the relationship, both male and female will always have the intents communication between them. For example, by asking the news from their couple, tell their experience or even express their feeling. Liana and Herdianto (2017) said that there was a significant correlation of dating relationship couple that related to their communication intensity and their commitment with what they are doing. They found that the higher the communication intensity, the higher commitment, otherwise, the lower intensity of communication to be done, the lower the commitment to be. It means that the dating relationship couple often done the communication in their daily life, perhaps they have the commitment that they will do.

The communication that they have is not always be done by face to face but also through social media. For instance, while they can not meet each other they will communicate by social media wheteher it is text, call or even video call. Media social certainly make them still keep in touch in doing communication. One of the popular media social that used by many people today is WhatsApp. This media social allow the user to text, call, and video call. Even it is also has the news feed that everyone can share their photos, video, or status.

Hancock and Rubin (2014) stated that no significant differences between male in doing the communication, however, when they have the communication with female especially in speaking, they often interrupt more and use much more dependent clauses. Further they also conclude that there are two aspect that influence the female in doing the communication, they are dependent clause and interruptions. This is occurred related to the gender role. Language may be influence more by the schema of gender norms rather than the gender characteristics of the speaker. In the specific finding, especially for making the request, Onem (2016) found that both male and female significantly difference in using the total words for each request statistically that females tend to make length sentence, more details and more direct. It is also related to the social and culture of the participant to avoid the losing face

As the woman have the linguistic ability better than men, especially in speaking, will they also have the better ability in doing indirect speech act while communicate with their opposite couple? As stated by Clark (1977), indirect speech act use to express something by other constructions. It will be interesting to be known that whether female or male that often use indirect speech act in their communication through WhatsApp while texting their couple. This paper try to analyse indirect speech act between female and male who involve in dating relationship through their WhatsApp texting.

Theory and Method

Direct and Indirect Speech Act

While people do something for other or have others to do something for them, speech act are utterances to make both of these happen (Reiter, 2000). Making apologies, requests, promises or threats are all speech acts. Searle (1975) makes a distinction between direct and indirect speech acts. Direct speech acts have a propositional content and they carry an illocutionary force-an intention (Searle, 1975). In other words, asking questions with the expectation of a real answer is an example of direct speech acts. For instance, “can you

swim?” can be described as a direct speech act if the question asked solely for the purpose of providing information (Yule, 2006). On the other hand, an indirect speech act is “an act performed” by means of another” (Searle, 1979: 60). In other words, when the syntactic structure is similar to that of a question but the function is that of a request, it can be called as indirect speech act (Yule, 2006). For example, “can you turn the music down?” is not truly a question. As a result, depending on the intended meaning, a speech act can be direct or indirect.

Dating Relationship

Ericson (2009) said that every individual should face the phase of growing. It is about a close relationship with his/her opposite sex (Liana in Papalia, Olds, & Feedman, 2009). Man and woman tend to have the close communication between them. Therefore concepts of dating relationship is a usual thing that happens in the society especially for early adulthood. When they have this phase, individuals disposed a romantic relation that many people called is as dating relationship (Santrock, 2003).

Methodology

This research use descriptive qualitative. According to Creswell (2014) qualitative research describe the natural setting that able to the researcher in developing experience as an unfolding model. The participants of this research are three couples who use WhatsApp in doing communication. Their ages is 20-25 years old. The data was collected by documentations that contain of message history in their WhatsApp. While in analyzing the data by categorize it into direct and indirect speech act based on Clark (1977).

Form	Function
Declaratives	Assertion
Interrogatives	Questions
Imperatives	Commands

While the characteristics of indirect speech act is expressed by other construction. If someone deliver the sentence, for example in the declarative it is not always functioned as the assertion in its illocution. It means that the function and form is nit parallel

Findings and Discussion

Based on three couples chat history the researcher categorize each of their sentence into direct and indirect speech act. The following table show the chat history from the first couple which show that there are three speech act that has been found. The first is when the female said “udah itu ajah? (just it?)” in this sentences the female use interrogative sentences however it is not functioned to ask or make question but to assert or respond to the male. The second is when the man said “jangan dipaksakan udah malam ini (dont impose yourself, it has been midnight)” in this sentences the man use declarative sentences however it is functioned to command the female to stop.

Chat history from couple 1

Direct	Indirect
Female : lagi apa sayang? (what are you doing dear?) Male : tiduran yang, sayang lagi apa? (I am lying down dear, how about you?) Female: lagi ngerjain tugas yang, banyak, bantuin (I am doing my task dear, they are so many) Male : tugas apa? Sini aku bantuin deh (what task is it? Let me help you) Female: LP yankk (LP darl) Male : apa itu lp? (what is LP) Female : Laporan pendahuluan, gak ngerti itu sayang (preliminary report, you'll not understand dear)	Male : yaudah (alright) Female: udah itu ajah? (just it?) Male : nnt ganggu pulak yang (I am afraid, will disturb you) Female: capek lho yang, jenuh, mknya ngechat ayang (so tired darl, saturate, that is why I text you)
Male : sama siapa pulang dr klinik? (with whom you go back from clinic) Female: sama yang lebih ganteng dr ayang (with someone who more handsome than you dear) Male : emang ada? (is there anyone be like that?) Female: ada gak ya? (will it be there?) Male : mana ada (it will not) Female: kayaknya yang jemput aku tadi ganteng lho yang (but, it the one who pick me up is handsome dear) Male : gak yakin aku (I dont believe it) Female: ganteng lho yang tukang gojeknya (the gojek rider is handsome) Male : hahaha, gojek rupanya (hahaha. It is gojek) Female : hahaha iya sayangkuh, Bsk jemput yaaa, pulang soree (yes, my dear, pick me up tomorrow, I'll be back in the afternoon) Male :bisa gak ya? (can I?) Female: gosah (you can't)	Male : jangan dipaksakan udah malam ini (dont impose yourself, it has been midnight) Female: daripada gak siap, pagipun dibantai yang (I am afraid it will not be done, I'll do it till morning)

In the second couple chat history, the indirect speech act can also be found. The first is when the female said “bukannya abg yg ngajak? mestinya abg tau (you have asked me, it means that you’ve known)” she use the interrogative sentences but it is functioned to assert that the male who has asked her. The second is when the female said “rasa abg adek mau kemana? (do you think, where I want to go?)” she use interrogative sentence to however it is also function to assert to the male that she dont know where she want to go. The third indirect

speech is when the female said “berarti kita gak jadi pg inikan? (it means that we will not go)” shes use interroagtive sentences to while the function is to assert. Then the female also said “yaudah adek mau tdr, malas, bye, gosah balas (if so, I want to sleep, so lazy, bye, dont replay it)”. She use imperative sentences which is the function is to assert to the ma that she did not want to chat the male. And the last is when the female said “trs ajah gak tau. Teruss gak tau (you still dont know, still be like that)” she use imperative sentences which the function is to command but here it is function to assert that the female was angry.

Chat history from couple 2

Direct	Indirect
Female: jadi kita pg bg? (will we go dear?) Male : jd dong (yes ofcourse) Female: kalau gt mandilah adek dulu ya (if so, I am going to take a bath) Male : gosah mandi (dont take a bath) Female : knp? Nanti jauh2 pulak abg dr adek (why? You’ll keep distance from me later) Male : mana bisa abg jauh dr adek, bisa kiamat dunia abg nnt (how I can keep distance from you, seems to be end of the day for my world) Female: alay, teringatnya kemananya nnt kita bg? (tacky, by the way, where will we go dear?) Male : adek maunya kemana? (where do you want to go dear?)	Female : bukannya abg yg ngajak? mestinya abg tau (you have asked me, it means that you’ve known) Male : abgpun bingung (I am confuse to) Female: jd pg ato gak ini? (so, will we go?) Male : jd (yes) Female:kemana kita? (where will we go)
Male : kemana mau adek lah (where do you want to go) Female: terserah abg (up to you) Male : adek pengen kemana? (wher do you want to go)	Female : rasa abg adek mau kemana? (do you think, where I want to go?) Male : rasa adek abg tau? (do you think I know it?)
Male : kan marah pulak... (are you angry) Female: gak (no) Male : gara2 gt ajah (it cause a simple thing) Female : jgn balas lagi (dont replay it again) Two missed calls Male : kok gak diangkat? Knp sih dek? (why dont you answer it?, what happen dear?) Female: knp ya? (why?) Male : mana tau abg (I dont know)	Female :berarti kita gak jadi pg inikan? (it means that we will not go) Male : kok gt? (how be like that?)
	Female: yaudah adek mau tdr, malas, bye, gosah balas (if so, I want to sleep, so lazy, bye, dont replay it)

	Female : trs ajah gak tau. Terusss gak tau (you still dont know, still be like that)

In the third couple, the indirect speech act also can be found. The first is when the female request something to the male. In doing request the female did not use interrogative sentences but she use imperative sentences by use the sentence “eh, aku titip pembalut ya (eh, I board out menstrual pads)”. The second when male said “malu loh beb (I am shame dear)” which is means that he did not want to buy female’s menstrual pad however the male express it with another way. The third is when the female got angry because the male did not want to fulfill her command and the male asked “is it ok” but female did not answer it with short question as it should be but give a long assertion and command. She said “aku tiba tiba capek, mau tidur, kamu gosah datang ya, ngantuk berat (I suddenly tired, I want to sleep, you dont need to come, so sleepy)”. Then while the male respond by declarative sentence “yaudah kalau gt (if so, alright)” the female use her indirect speech act again by saying “sampe kapanpun gosah datang2 (whenever it is, you dont need to come)”. The imperative sentences that used by the female function as the assertion that she was not ok with it. Then the male also said “ampunlh menghadapi boru regar kesayangan ini (so tired to face my lovely regar girl (surname))” which is want to said that he did not know what to do the the female however said it by different assertion. Last but not least the female also said “makan sayangmu! (eat your love)” which is the sentence’s form is iperative however the function is not to command but to give the assertion that she was really angry.

Chat history from couple 3

Direct	Indirect
Male : yaudah aku ini otw rumahmu ya (I’m on the way to your house)	Female : eh, aku titip pembalut ya (eh, I board out menstrual pads) Male : males ah. (so lazy)
Female: oh jadi kamu gak mau? (oh, you dont want, do you?) Male : aduh, marah lagi (oh, she is angry again) Female : bye!!! (bye!!!) Male : jgn gtlah sayang, yodah nnt aku belikkan ya (dont be like that darling, I’ll buy it later) Female : udah basi, gak perlu (I dont need it again)	Male : malu loh beb (I am shame dear)
	Female : yaudah (alright) Male : gapapakan? (is it ok) Female : aku tiba tiba capek, mau tidur, kamu gosah datang ya, ngantuk berat (I suddenly tired, I want to sleep, you dont

	need to come, so sleepy)
	Male : yaudah kalau gt (if so, alright) Female : sampe kapanpun gosah datang2 (whenever it is, you dont need to come)
	Male : ampunlh menghadapi boru regar kesayangan ini (so tired to face my lovely regar girl (surename)
	Female : makan sayangmu! (eat your love) Male : astaga, yodahlah (gosh, Alright)

Based on the result above, it can know that the first couple both male and female use indirect speech act. The female use interrogative sentences however it is not functioned to ask or make question but to assert or respond to the male. While the man use declarative sentences however it is functioned to command the female to stop. It means that in their conversation the form of the sentences is not functioned as its function.

In the second couple the use of indirect speech can be found more than the first couple. There are five indirect speech acts that can be found which is all is done by the female. The first is the female used the interrogative sentences but it is functioned to assert that the male who has asked her. The second is when the female said used interrogative sentence but functioned to assert to the male that she dont know where she want to go. The third indirect speech is when she used interrogative sentence while the function is to assert. The fourth is when the female use imperative sentences which is the function is to assert to the male that she did not want to chat the male. And the last is when the female use imperative sentences which the function is to command but here it is function to assert that the female was angry.

In the third couple, the female do indirect speech act four times. The first is when the female request something to the male. In doing request the female did not use interrogative sentences but she use imperative sentences. The second is when the female got angry because the male did not want to fulfill her command respond it with by giving long assertion that should be short and add command. The third is the female used imperative sentences but functioned as the assertion that she was not ok with what the male do. The last is when the female five the imperative sentences however the function is to give the assertion that she was really angry. While the male do it two times. The first when he did not want to fulfill the female's want by giving the the other assertion and the second is when he did not know what to do cause of the female got angry by giving a long assertion.

It means that female use indirect speech act more often than male. Based on three chat history found that there are ten indirect speech acts that delivered the females of three couples and only three indirect speech acts by the male.

Conclusion

From three chat history that has been found, it can conclude that female use indirect speech act more than the male in texting through WhatsApp. The females tend to use the

sentences which is different in function and form rather than male which is use indirect speech act by express the sentence in different way but the function and form still paralel. However in the first couple, the male use indirect speech act with non paralel both of the fom and function. Therefore, the focus of the research that has been stated in the introduction part which stated that female tend to use the indirect speech act than male in their texting through WhatsApp can be proven. Besides it also in compliance with Allan and Barrabara (2013) that said that woman produce the sentence that more complex. As they can produce the sentence that not paralel both of the form and the function.

Abstract

The objectives of this study are to describe the condition English reading tasks for learning reading in Junior High School and the school's potential to develop the worksheet, to describe to what extent the multicultural-based reading tasks appropriate to the student's reading development, to describe the effectiveness of the use of multicultural-based reading tasks for learning reading, to describe the students' perception toward the implementation of multicultural-based reading tasks, to describe the teacher's input toward the implementation of multicultural-based reading tasks and to describe the experts' input toward the implementation of multicultural-based reading tasks. The research methodology used was research and development. Questionnaire, interview and observation were used for collecting the data. The result of the research shows that Multicultural - Reading Tasks for learning reading have been developed based on the students' need and characteristics, reading ability theories, and the corrections and suggestion from the experts and from the students.

Keywords: Multicultural-based reading tasks, developing, Students need

Introduction

Many studies have been conducted on developing multicultural based reading materials to improve students' reading comprehension. For instance, Novianto Trianto Hasibuan, Wisman Hadi & Sumarsih (2017) have conducted their research entitled the development of the teaching materials of multiculturalism-based fast reading skill for the VIII grade of SMP students in Medan city. This research aims to describe the feasibility of teaching materials of multiculturalism-based fast reading skills, the result of the students' learning in grade VIII in SMP Medan City, namely SMP N 27 Medan and SMP Taman Harapan Medan on the subject of fast reading skill with the developed teaching materials of multiculturalism-based fast reading skills, and the effectiveness of teaching materials of multiculturalism-based fast reading skill.

The plurality of Indonesians in language, culture and religion is not instilled from early learners, this is accordance with the research results of Priyatni, et al (2012), the plurality of Indonesian nation that is not planted early can be a conflict trigger. The emerging conflicts will soon be overcome by inserting the multicultural education in formal and non-formal education curricula from an early age. The main purpose of multicultural education is to foster the tolerance to cultural diversity and to foster the tolerance, solidarity, deliberation to the students. The reality of education in the field, the teachers still use conventional teaching materials, which are ready-to-use materials, without the effort to plan, prepare, and arrange their own.

Although many studies, as mentioned before, have made a lot of endeavors to the study, more new findings are expected to come up with further development on

multicultural reading materials research area. Moreover, the writer tends to develop about the multicultural based reading tasks in improving reading comprehension.

Method

This study is classified as Research and Development (R & D). Borg and Gall (2003: 569) state that R & D is a process used to develop and validate educational products. Educational products can be teaching media, teaching materials, textbooks, or workbooks. In this case, the product of this research is a set of multicultural task-based English reading learning material for the eighth grade students of MTs. GUPPI Kresnomulyo.

The validation process is done during the development of the tasks. The product is implemented in MTs. GUPPI Kresnomulyo, where it will be used. The revision of the product is done based on the evaluation of the implementation results. The participants of the study are divided into two groups. The first group consists of twenty seven eighth grade students of MTs. GUPPI Kresnomulyo Ambarawa Pringsewu and their English teacher. The second group consists of two English teachers and English Education Program lecturer of Lampung State University. Next the data collecting techniques of this research are questionnaire, interview and observation.

Result and Discussion

Based on the questionnaire given to 80 students, the English reading tasks for learning reading at the junior high school are not based on the students' need. Since the students want have the reading tasks that consist of inputs in various topic, ranging from daily life, education, entertainment, health and environment, to science and technology. Moreover, they also want to work on tasks that facilitate them on learning vocabulary, grammar, pronunciation, and the skill and strategies of reading. Here, the researcher presents the discussion of the findings on how reading tasks which have suitable contents for the eighth grade students of junior high school were developed. Related to the steps of the study, the reading tasks were developed based on the research procedures adapted from material development models and steps proposed by Nunan (1991), Borg and Gall (2003), and Sugiyono (2009).

In developing reading tasks which have suitable contents for the eighth grade students of junior high school, firstly, the researcher did preliminary information collection. In this stage, she reviewed some theories related to the research. The researcher also did an observation and gathered information about students' needs and characteristics. The results of the preliminary information collection show that reading ability has a crucial place in the English teaching-learning activities. It can be seen from the curriculum which states that the goal of the English class is stressed on the reading comprehension ability. It also can be derived from the theoretical review. Some reading experts suggest that teachers must teach reading comprehension ability explicitly. Hence, it is important for the teacher to be able to consider what skills, and how the skill might be presented in the teaching-learning process.

From the theoretical review, the researcher concluded that reading task is an important aspect on the development of students' reading comprehension ability, because it engages three element of reading comprehension at once namely, the reader, the text, and the activity. Thus, developing suitable reading tasks for the seventh grade students of junior high school is necessary.

From the needs assesment, the researcher found that the students wanted to develop their reading skills in understanding English reading texts. They need more reading learning source

related to what they want. In addition, related to the learning resources, the students wanted to have materials which have various activities and input.

The results of the theories review and the needs analysis were then used as the base for developing the tasks grids of the developed tasks. The tasks grids encompass the curriculum references, reading theories references, and the tasks components proposed by Nunan (2004). In this stage the researcher wrote down the objectives of each task, the input, and the activities. The tasks grids were used as the guideline in developing the tasks.

After writing the tasks grids, the researcher then developed the first draft of the tasks. She formulated the tasks grids into five units. Each unit consist of 3 to 5 tasks. Unit 1 represented previewing and predicting skills. Unit 2 covered scanning and skimming skills. Unit 3 served vocabulary building and guessing meaning from the context skills. Unit 4 offered recognizing text organization skill. While unit 5 covered interpreting reference and making inference skills. The first draft of the tasks was evaluated and validated by three experts. The validation results were used as the base of developing the second draft of the tasks and its tasks grids.

After developing the second tasks grids and the second draft of the tasks, the researcher then implemented the developed tasks. The second draft of the task was tried-out in the real teaching-learning of the English classroom. In this stage, the researcher also distributed questionnaire for evaluation to the students to know whether the developed tasks met their needs and characteristics. The results of the questionnaire were then used to revise the tasks for the final draft.

Related to the developed tasks, the researcher found some data obtained during the research. From the validation questionnaire result, the researcher found that the three experts agreed with the first draft of the developed tasks to be said met their appropriateness. It can be seen from the minimum average score or mean of each unit that range from 3.27 to 4.62, while the minimum acceptance of the average score is 3.0. However, the researcher revised some parts of the tasks based on the corrections and the suggestions of the experts.

Conclusion

From the evaluation questionnaire, the researcher found that the students agreed with the second draft of the developed tasks to be said appropriate for the students' needs and characteristics. It can be seen from the minimum average score on the questionnaire of each unit that range from 3.77 to 3.87, while the minimum acceptance of the average score is 3.0. Yet, the researcher revised the second draft of the tasks based on the implementation results.

The final draft of the developed tasks was the results of the revisions in the previous steps of the research. They were developed based on the students' need and characteristics, reading ability theories, and the corrections and suggestion from the experts and from the students.

Transitivity Analysis on Soleimani's Assassination Issues in *Al Jazeera* And *New York Post* Editorials

Oktavia Handoko¹, Dian Puspita²

handoko.oktavia@gmail.com¹, dian.pustpita@teknokrat.ac.id²

Universitas Teknokrat Indonesia^{1,2}

Abstract

This study aims to define the frequent process and the ideational meaning that represent Soleimani based on the transitivity component found in Al-Jazeera and New York Post editorials. Hence, the researcher uses qualitative research to define and describe each clause written. The data were six editorials from each newspaper. Furthermore, Al Jazeera and New York post have different results in process and participant component, but it has similarities in the circumstance element. In Al Jazeera editorials, the most dominant process is relational attribute within 45.5% occurrence and attaches with 22.2% of carrier and attribute. These editorials emerge from the use of relational attribute processes to ascribe something and give clear information related to something that is being described. As mentioned the way they describe Soleimani based on their standard. Meanwhile, in New York Post editorials, the most dominant process is material process within 48.1% occurrence and attach with 24% actor and 20.3% goal as dominant participants. These editorials engage the use of material process to express what the writer wants to deliver through the action or a situation that happened. The actor frequently signifies Soleimani and Trump as the subject in the clause written. Then, circumstance types are locations in which Al Jazeera has 56.2% occurrence while New York Post has 73.6% occurrence. These appear to give clear information in both editorials where the process takes place. By learning transitivity analysis, the reader tends to become familiar with the language that used to deliver a certain figure, especially in editorials that deal with arguments and perception.

Keywords: Editorial, Participant, Process, Soleimani Assassination, Transitivity

Introduction

Systemic functional linguistics (SFL) distinguish language as human experience through meaning based on its function within lexicogrammar as part of metafunction, which is divided into ideational, interpersonal, and textual (Halliday & Matthiessen, 2014). Each part has its own function, however, ideational metafunction deliberately being analyzed since its constructing human experience into a number of events such as happening, sensing, being, or having (Halliday & Matthiesses, 1994, 2014). These events emerge into several processes of clause known as transitivity. It refers to how the phenomena of the real word are represented in the language used as part linguistic structure (Miranti, 2014). Ong'onda (2016) also states that language is a means of expressing and transferring ideas or experience among people. Hence, newspaper editorial is chosen because it engage with various issues and it present an argumentative texts that express the opinion of the writer due to the current news even the controversial events (Elyzale, 2014)

As well as Middle East regions often receive xenophobic sentiments given by Western countries due to negative statements made (Wu, 2002 in Najm, 2019). This situation occurs because the language used might result in different readers' opinions. It can be seen in the way of both editorials constructing their news related to Soleimani's assassination. In the Middle East military, he was known as Iranian senior military officer under Islamic

Revolutionary Guard Corps (IRGC's), Iran's supreme leader, and his presence gave numerous effects within the Middle East region and its enemies. These matters are rarely discussed in several newspapers editorial which previously only focused on demonstration, immigration, or terrorism.

There are Ong'onda (2016) who focused on a figure who causes violence and chaos in Kenya which resulted material process used that portrayed the action, Al Fajri (2017) describing actors in Jakarta's governor blasphemy demonstration by comparing two newspapers in defining material, verbal, and relational that represent one side of the newspaper role, Miranti (2014) comparing two editorials based on power and ideology by combining Halliday's transitivity and Fairclough's framework. Yet, there is limited discussion about defining military figures, especially Soleimani. However, the present researcher intends to analyze how ideational meaning is defined through the language used as regard to Soleimani in both newspaper editorials within transitivity components within six processes.

a. Material Process

Material is the process of doing and happening. It involves several participants such as *actors* who did action, *goal* as an entity at whom the process is directed, *scope* is restatement of the process, *recipient* is an entity who receives goods or services, and *client* is the one that good or services given to.

b. Mental Process

This is process of sensing, thinking, or feeling. It has two participants such as *senser* is a conscious entity who felt, thinks or perceive, while *phenomenon* is something that thought, felt or perceive by the senser as a subject.

c. Verbal Process

Verbal is the process of saying. It has several participants involve such as *sayer* who putting out a signal, *receiver* is to whom the verbal process is directed, *verbiage* is nominalized statement of the verbal process, and *target* is the acted upon verbally

d. Relational Process

Which process of being and having. It is divided into two types; *intensive attributes* that construe a quality or classification of degree. It has two participants such as *carrier* as an entity that is being ascribed and *attribute* as an entity that ascribes the carrier as subject. *Intensive identifying* is the process of defining. It has two participants such as a token that stand for what is being defined and *value* is that which defines.

e. Behavioral Process

This process deals with human psychological and physiological behavior such as breathing, dreaming, coughing and staring. It has one participant called as behavior which entity who is behaving

f. Existential Process

This deal with something that exists followed by the verb *be*. The phenomenon that is labeled as "existent" are things; person, object, institution, abstraction, and action or event attached with the word "there" that signifies new information. The process is sign by verb; be, exist, arise with one participant called as existent where it signifies an entity that exists.

Theory and Method

This study used a qualitative method since the data in the non-numerical form. Heigham and Corker (2009) stated that qualitative research entails collecting primarily textual data and examining it using interpretive analysis (p.5). In addition, Miles and Huberman in Afrianto & Inayanti (2016) also state that qualitative allows for inferential interpretation of narrative constructed, plural and interior realities. Hence, the data of this research focusing on clauses written as categorized in transitivity components. The newspaper editorials is taken from online website, <https://www.aljazeera.com> and <https://www.nypost.com>.

Findings and Discussion

The analysis of this research is presented based on its distribution from six editorials on each transitivity component such as process, participant, and circumstance. These components are selected based on the occurrence and the description of each data is shown as follow:

The Process Types, Participant Function, and Circumstance Process

Table 1. Type of Process

Type of Process	Al Jazeera Editorials		New York Post Editorials	
	Σ	%	Σ	%
Material	29	36.7	26	48.1
Mental	4	5	1	1.8
Verbal	8	10.1	5	9.2
Relational				
a.Attribute	36	45.5	21	38.8
b.Identifying	2	2.5	0	0
Existential	0	0	1	1.8
Total	79	100	54	100

It is seen from the table above, 36 or 45.5% relational attribute process occurs in Al Jazeera editorials. The function of this process to make readers understand the information during Soleimani present and his assassination by giving clear description using linking verb. Meanwhile, 26 or 48.1% material process appears in New York Post editorials. It helps to explain the situation by mentioning the action verbs such as killed, send, gave, ordered.

Table 2. Participant Function

Types of Participant	Al Jazeera Editorials		New York Post Editorials	
	Σ	%	Σ	%
Actor	29	17.9	2	24
Goal	27	16.6	6	20.3
Recipient	5	3	2	3.7
Client	1	0.6	4	0.9
Scope	2	1.2	1	0.9
Sensor	4	1.2	1	0.9
Phenomenon	4	1.2	1	0.9

Types of Participants	Al Jazeera Editorials		New York Post Editorials	
	Σ	%	Σ	%
Sayer	8	4.9	4	3
Receiver	0	0	1	0
Verbiage	8	4.9	4	3
Target	0	0	0	0
Carrier	36	22.2	21	19.4
Attribute	36	22.2	21	19.4
Token	2	1.2	0	0
Value	2	1.2	0	0
Existent	0	0	1	0
Total	162	100	108	100

From the table above, 36 of carrier and attribute attach in similar occurrences in Al Jazeera editorials. These two participants are connected and the carrier might function as the head (subject) that is being ascribed while attributed as the tail that ascribes the carrier. Meanwhile, there are 26 or 24% actor appearances and it might pairing with several participants, such a goal within 22 or 20.3% occurrence in New York Post editorials. These participants are functions to describe an entity that did an action which has purposes and the continuation.

Table 3. The Circumstance Process

Types of Circumstances	Al Jazeera Editorials		New York Post Editorials	
	Σ	%	Σ	%
Extent	4	12.5	2	10.5
Location	1	56.2	1	73.6
Manner	8	6.25	4	0
Cause	2	9.3	0	5.2
Accompaniment	3	3.1	1	5.2
Role	2	12.5	1	5.2
Total	4	100	1	100
	2		9	

In this table, both editorials are used circumstances in explaining when, where, or how the situation takes place as giving complete information to the readers within 18 or 56.2% occurrence in Al Jazeera editorials and 14 or 73.6% in New York Post editorials.

From that table above, transitivity components that occur in both editorials resulted differently in terms of participants and process, while it has similarities in the circumstance function. Emilia & Syifa, et.al (2018,2014) in Kuswoyo & Rido (2019) state that the process centers on part of the clause and it is realized by the verbal group, and construe what going-on are represented in the whole clause as well as participant role attach in each process. Furthermore, circumstances used to give complete information related where the process takes place through time, place, manner (Thompson, 2014 in Kuswoyo & Rido, 2019). However, behavioral and existential processes have limited occurrences in both newspaper editorials, thus, the complete description only focused on material, mental, verbal, and relational. Here the description of process types, participant and circumstance found in Al-Jazeera and New York Post editorials.

Excerpt 1(AJ/02/A)

The US air strike	That killed	Iranian General Qassem Soleimani and Iraqi Militia leader Abu Mahdi al Muhandies
Actor	Pr:material	Goal

The actor is “the US air strike” represent the American air force did an action where it construe by the process “that killed” means to expresses the actor assassinate people who being consider as their enemy and the goal of the actor itself can be seen through “Iranian General Qassem Soleimani and Iraqi militia leader Abu Mahdi al-Muhandis” and they known as Iranian commander which succeed killing many American troops.

Excerpt 2 (NYP/05/E)

A MQ-9 Reaper drone	Ended	His decades-long killing spree
Actor	Pr:Material	Scope

The actor “a MQ-9 Reaper drone” represents an entity that belongs to the US and has been used by the US militaries for many purposes. The writer indicate the readers that Soleimani intervention is stopped due to his death, followed by the process “ended” to emphasizing the action and it is completed by the scope “his decades-long killing spree” which describing Soleimani journey in military and wars.

Excerpt 3(AJ/44/B)

They	Perceive	As war criminals
Senser	Pr:mental	Phenomenon

The senser is “they” refers to those native people who live in certain region in the Middle East ended called as the villain due to their action toward the previous commanders, and it expresses by the phenomenon “as war criminals” connected by the verb “perceive”.

Excerpt 4 (NYP/35/F)

Trump	Did not want	To engage
Senser	Pr:material	Phenomenon

The senser is “Trump” expresses his thought due to Iranian response due to Soleimani’s assassination and he try to avoid direct communication between both countries, it expresses by the phenomenon “to engage” which representing his thought and it construe by the process “did not want”

Excerpt 5 (AJ/03/A)

Many authors	Claim that	It 'is inexcusable to ignore the crimes of Soleimani'
Sayer	Pr:verbal	Verbiage

The sayer is "many authors" represent those experts who deliver their ideas related to crime that has been done by Soleimani, either he protected his country but he also killed many US troops and local citizens. Thus, the writer tends describing their ideas through certain statement needed which sign by the process "claim that" which emphasizing something is true whether could not be proven. The complete information that want to deliver by the speakers presented in verbiage "is inexcusable to ignore the crimes of Soleimani" means they want the readers agree with their arguments regarding his crimes.

Excerpt 6 (NYP/14/D)

Prompting first Secretary of State Mike Pompeo and then others	To cite	"imminent threats"
Sayer	Pr:verb al	Verbiage

The sayer is "prompting first Secretary of State Mike Pompeo and then others" referring to 70th the US secretary. He tries delivering similar idea with others by adding certain statement as supporting opinion which expresses by the process "to cite" which portraying Soleimani figure as the most dangerous enemy that faced by the US, where the writer quoted the argument through verbiage "imminent threat"

Excerpt 7 (AJ/64/A)

He	Was	Hardly a paladin or symbol of justice of peace
Carrier	Pr:Relational	Attribute

The carrier is "he" represent Soleimani that being ascribe as hero in his country and it is ascribe by phrase "hardly a paladin or symbol of justice of peace" as attribute and connected by a linking verb "was" sign his figure in the past

Excerpt 8 (NYP/01/F)

Attack on Qaseem Soleimani	Was	Detterence, not escalation
Carrier	Pr:Relational	Attribute

The carrier is "attack on Qassem Soleimani" refers to a condition that need to be taken by the US authorities. The writer ascribing Soleimani as the biggest threat of the US and his action needed to be stopped. While the function of the attribute "deterrence, not as escalation" expressing the strategy made by the US authorities is ascribe as prevention action rather than increasing the violence's which connected by the linking verb "was" that signing their long plans.

Conclusion

Therefore, the frequency and description of each transitivity processes in both Al Jazeera and New York Post editorials creating different focuses and information within the language used implied by two different writers through the implementation of transitivity components. There are 36 occurrences of relational attribute in Al Jazeera attach with two participants as carrier and attribute. It implied that the writer want ascribing the assassination

by giving clear explanation about who exactly the Soleimani is, by mentioning his long carrier and such achievements that he had. Meanwhile, there are 26 occurrences of material process in the New York Post engaged with two participants such as actor and goal. The writer tend to repeatedly emphasizing the assassination is the best way to prevent the US enemy. At the same time, there is a verbal and mental process in both editorials. There are 8 occurrences of verbal process in Al Jazeera and 5 occurrences of verbal in New York Post which implied additional statements through quoting to make readers believe if the information is true. Then, there are 4 occurrences of mental in Al Jazeera and 1 occurrence of mental in New York Post which defining the effect after the assassination and response to this issues. Hence, these three elements construe ideational meaning that want to be shared by the writers from six editorials, and through this analysis the researcher is able to define their intention in writing a number of events that stated into narrative style, aim attracting the readers toward the current issues happening from different languages used.

Laughin' in Times of Quarantine: Implicature in Memes Related to COVID-19

Anggit Kuntoadji¹, Delvi GiaAndriani², Nina Setyaningsih³
anggit.adji@gmail.com¹, delvigia174@gmail.com², nina.setyaningsih@dsn.dinus.ac.id³

Universitas Dian Nuswantoro^{1,2,3}

Abstract

The world is now facing COVID-19 pandemic. This changes people's way of living, working from home due to quarantine is a case in point. Being in a quarantine for quite a long time thus causes people to be more creative. They make a serious thing become a funny one, for example by creating humorous memes on the internet to lessen the feelings of fear or stress. This research is aimed at examining the implicature of internet memes related to the COVID-19 pandemic. It focuses on describing the meaning implied in the memes based on the context and to investigate the purposes of the memes. The study is based on Grice's theory on implicature (1975). Implicature refers to the act of meaning or implying one thing by saying something else. The study used qualitative descriptive method to describe the implicature in the memes. The data used in this research were taken from 5 internet memes. The result of the analysis reveals that the memes mostly imply the impacts of the pandemic in people's lives. The memes also serve communication goals. These memes are used to entertain, to remind and inform people, to satirize, and to express feelings.

Keywords: COVID-19, Implicature, Meme, Pragmatics

Introduction

Staying positive and healthy is important while facing COVID-19 pandemic. Being positive also helps people to think clearly and less afraid to COVID-19. People do various activities to keep being positive physically and mentally. One of these activities is to engage in entertaining activities that results in laughter. Laughing helps people to release stress easily without spending a lot of money. In the era of Internet, by using a smartphone people can find funny and entertaining materials easily, for example in Internet memes. According to (Rogers, 2014) memes carry information, are replicated, and are transmitted from one person to another, and they have the ability to evolve, mutating at random and undergoing natural selection, with or without impacts on human fitness (reproduction and survival). As mentioned above, memes can function as media to improve a person's creativity and to share happiness especially during COVID-19 pandemic. Memes can also be adapted and evolved according to the background which someone has. In fact, memes will last long if there is an improvement in implicating them.

The term *meme* has been extensively conformed in various studies, ranging from psychology to linguistics (Shifman, 2013). It shows that memes are very flexible and can be defined based on people's background. Related to the present condition, people use memes to share about what they think and feel about COVID-19 pandemic which has impacts on many aspects.

People communicate with each other both in written and spoken. When talking to each other, they imply certain meanings to be delivered (Amarullah, 2015). Since this pandemic has changed several aspects in life, the limitation in doing activities in public makes people do something differently. They do many activities online to prevent direct interaction. Being

in quarantine in a long time has made people stressed out and have less direct interaction with others. To cope with this problem, one of the ways many people do is by enjoying and even creating internet memes to express their feeling. Thus, memes implicate information in funny ways which also keep people's sanity up.

Some studies have been conducted to analyze internet memes. (Putra & Triyono, 2016) investigate violated memes gathered from Indonesian Internet Communities by using discourse analysis and social semiotics. They find that the factor of cultural diversity is divided into several sub-aspects. They are the diversity of sense of humor, the age of meme audiences and creators, and also the popular events that happened in the society recently. Moreover, they assert that the majority of the Indonesian internet communities often force memes and use the memes in a context that is inappropriate. Another research was conducted by (Zubaidah & Ardelia, 2018). They discover several purposes behind every meme. (Zubaidah & Ardelia, 2018) find that memes is not only used for humour purposes, they can persuade people, express sarcastic, or it can be used for black campaign. The purpose of the memes depends on the context that the meme makers want to spread through the memes. Moreover, (Puri, 2019) was examining the function of humor found in comic cartoon. Humor situation can be created in a conversation if there is a violation of a cooperative principle by the participants.

Meanwhile, studies on pragmatics and implicature have been done by (Lubis, 2015). (Lubis, 2015) examines the violation in maxims which creates the implicature in Indonesia Lawyers Club TV program. Her findings show that the conversation on Indonesia Lawyers Club TV program can deliver the message uttered by the speaker and the hearer if it follows the cooperative principles. Besides, the maxim violation have to be avoided by the communicator and the communicant. When it already achieved, the message can be understood well. In another research, (Saniatang, Sili, & Setyowati, 2020) state that the implied meanings behind the utterances of their data depend on the conversation context. They also find that implicature is used to convey feelings and to show the speaker's personality indirectly. The form of the implied meanings can be found in the form of informing, refusing, reminding, criticizing, assuring, affirming, apologizing, and entreating. Moreover, in his research, (Hadi, 2018) states that conversational implicature is used to express the situation in a specific context, but on the other side conventional implicature situation is not derived from superordinate pragmatic principle like the maxim, but simply attached by particular lexical items or expression convention.

This research is different from those previously mentioned in that it tries to find out the implicature of Internet memes that appear during COVID-19 pandemic since understanding memes requires not only linguistic but also situational context. By analyzing such a phenomenon, it is expected that the study will contribute in the pandemic handling efforts. Furthermore, this research is aimed at examining the implicature found in internet memes related to the COVID-19 pandemic. The analysis will focus on describing the meaning implied in the memes based on the context and investigating the purposes of the memes.

Theory and Method

This subsection describes the theoretical frameworks that are used to analyze the data. This research was conducted in the perspective of pragmatics. Pragmatics studies meaning based on the context from hearer and speaker (Sri Rahayu & Safnil, 2016). Furthermore, it involves interpretation of context of what, whom, where, when the circumstance of the context (Suryadi & Muslim, 2019). It also comes with semantics which supported in revealing the circumstances about the speaker is talking about. In delivering message, it is also very crucial to avoid the misunderstanding in saying or giving information.

Pragmatics studies topics of speech act, presupposition, and implicature. According to (Anyanwu & Abana, 2020) in linguistics, a speech act refers to an utterance that is defined based on what the speaker delivers to the listener. Speech acts are verbal actions happening in the world. Presuppositions are variously defined but in general constitute assumptions underlying a statement or utterance (Puspasari, 2020). Implicature deals with an action or saying word that it is implied by uttering something else (Andre, 2017).

Implicature concerns with an speaker's implicit meaning. It happens when the speakers expresses something indirectly. The spoken utterance or written text explains the situation according to the condition happened by speaker. In addition, (Rahayu, 2016) states that the use of language is also aimed at delivering an implicit or hidden message. It indicates that when people construct implicit meaning, this is referred to as implicature. There are several types of implicature which was introduced by (Grice, 1975). According to (Grice, 1975), implicature is divided into two categories, namely conventional and non-conventional implicature. Conventional implicature is the implications of conventional meanings of the words found in a conversation, while conversational implicatures (non-conventional implicature) are pragmatic inferences, unlike entailments and presuppositions, they are not tied to the particular words and phrases in an utterance but arise instead from contextual factors and the understanding that conventions are observed in conversation (Khushboo, 2021). Conversational implicature implies a meaning behind the text or spoken word that is uttered or written by the speaker directly as the additional information for the listener. Conventional implicature occurs when a speaker's additional unstated meaning is associated with the use of specific words, such as 'but', 'and', 'even' or 'yet'. Conventional implicature is an opposite assumption from what speaker concerns based on the context of the circumstance (Nordquist, 2020). The meaning of written and spoken language is different from the meaning which the speaker tries to convey (indirect).

To analyze the data, a descriptive qualitative method was applied in this study. Descriptive qualitative was used as the method for describing and observing the phenomenon's traits studied. In addition, (Isaac & Michael, 1987, p. 91) descriptive research explains the situation or event in detail. Thus, this research involves the description of phenomenon of Internet memes related to COVID-19 without employing statistical procedures. This method is intended to find and explore the implicit meanings in memes related to COVID-19.

The data consist of 5 memes obtained from @9gag Instagram account. The unit of analysis is the verbal elements (sentence, phrase, words) in the memes. The data were analyzed by segmenting verbal elements in the memes, and then identifying the pragmatic meaning specifically implicature contained in the memes. Meanwhile, the non-verbal element (images or pictures) were used as a context to understand the implied meaning contained in the memes

Findings and Discussion

To describe the memes, three aspects namely content, context of the memes, target of the memes were examined. They can be explained as follows:

1. Content

The content of the meme is important because the content carries the message from the meme creator to the reader. A meme usually consists of a description and a punchline, and an image which supports the description. Observing the content helps the researchers to decide the meme generally, and it will help to construct the specific content to analyze the other aspects. It will also give overall information about the meme.

2. Context

Context helps in understanding the meme since some readers may have trouble getting the message of the meme. The context will be revealed with implicature to describe the meme, not only from the image but also the implicit meaning. Misunderstanding memes sometimes occurs as readers only look at the image instead of the meaning which the meme creator tries to deliver.

3. Target

This aspect involves bringing the joke into target which is relevant to the meme. Target also describes the specific person directed by the meme. It also shows the language which is used to deliver the meme according to the target meme, it can be children, adults, or certain group of people. Revealing the target is aimed to direct the target reading, for example according to age and the circumstances which someone has experienced.

This study reveals the meaning that speaker or the meme creator intends to convey. Implicature deals with the hidden message in the memes. By considering the three aspects mentioned above, the implied meanings of the memes can be revealed. The memes also have different meanings and purposes as to why they are made. The memes are not merely jokes. Instead, they actually serve communication goals. Based on the analysis of memes, the purposes include to entertain the readers because the memes contain humorous materials, to remind and inform people about the COVID-19 prevention efforts or protocols, to satirize the pandemic condition, and to express feelings towards the pandemic. The following section provides the explanation of the data.

Meme 1: Island Life

Figure 1: Island Life Meme
(Source: 9gag)

Figure 1 contains two different photos with different background. The first photo shows a living room of a house and the second one is an image of the inside of a fridge. The description explains some tips to do while doing self-quarantine. The words “Meanwhile, inside the fridge” is the comparison between two different photos with different background. On the first picture, there is a comfortable room and the second has bottles and a mask which stand separately from “Corona” bottle. From those pictures, the first one gives a tip to do something while in pandemic and it is represented by the comfortable room to show the self-quarantine. In contrast, the fridge background shows the picture of bottles wearing a mask and “Corona” bottle. “Corona” is a brand of an alcoholic drink which is favored by most of people in America. They often serve the drink from fridge and drink it while it is cool. The picture implies the situation which is represented by the bottles avoiding Corona just like

people avoiding coronavirus by using masker and staying away from other people by doing self-quarantine. The target of this meme is for adults and teenagers who are already legal for consuming the alcoholic drink and people who drink it. The purpose of this meme is to remind people of the Coronavirus which is very dangerous and to keep health protocol by wearing mask and keeping distance to prevent the COVID-19. It can be seen on the meme that Corona bottle refers to Corona itself and the other bottles wearing mask refer to the people who do the health protocol during COVID-19 pandemic.

Meme 2: Women Arguing with a Cat

Figure 2: Women Arguing with a Cat Meme
(Source: 9gag)

Figure 2 shows two different opinions, two women pointing at the cat and saying their opinion and the cat sitting down while looking at them. This meme uses “Corona” alcoholic drink as the main topic of the meme. This meme has two opinions, the women say that the cat was infected by Coronavirus but the cat says that it has a case of Corona. The word *case* here does not mean the cause of the infection but it describes a container of Corona alcoholic drink. This meme uses ambiguous words that have more than one meaning to create the joke.

This meme refers to a joke about COVID-19 during pandemic which people mostly heard about case of corona, the meme creator creates it to give a joke for people who relates in sharing information about corona case. Otherwise, the creator creates this to relax people not to be panic the most in COVID-19 case.

Meme 3: Kid Playing Baseball

Figure 3: Kid Playing Baseball Meme
(Source: 9gag)

Figure 3 shows a kid who plays baseball and he tries to smash the ball, unfortunately the ball does not hit the target and hit his own vital part of his body instead. The baseball kid represents optimistic people who think about good things that would happen in the year 2020, unfortunately it did not happen because COVID-19 makes everyone stay at home and avoid

physical contact. The *Coronavirus* word next to the ball showing the missed shot from the kid represents people's expectation in 2020. The meme creator tries to express what he and people feels about Coronavirus disease impact. This meme represents people in the world who were affected by COVID-19 in 2020. The meme is a reflection of how COVID-19 has messed many people's lives and plan in the year 2020.

Meme 4: T-Rex Meme

Figure 4: T-Rex Meme
(Source: Instagram @9gag)

A tyrannosaurus rex (T-rex) is displayed in Figure 4 with a description “Couldn’t wash hands, is now extinct”. T-rex represents people who do not want to wash their hands during COVID-19 pandemic. The health protocol suggests that washing hands and wearing mask can prevent COVID-19. The meme implies meaning that if people do not wash their hands, they will die and become extinct just like T-rex. The message is to remind the readers to be careful and stay discipline in facing COVID-19. The meme creator makes a meme as a reminder so people are attracted and get the message implied in the meme. Using character and unusual things attract more people and the message on meme can be delivered in a unique way, providing a new reading source to gain information and also a joke at the same time. Using meme, the creator conveys the message without offending the target and delivers it in a funny way.

Meme 5: Man and Fortune Cookie

Figure 2: Man and Fortune Cookie Meme
(Source: Instagram @9gag)

Figure 5 shows two different reactions of a man. The first one is his happy reaction because the man thinks he will get positive fortune. The second reaction is unhappiness

because he is tested positive for COVID-19. The word *positive* in this pandemic era can have two meanings. In the first picture, *positive* means good, that is why the man is smiling. While in the second, *positive* implies the opposite, because that means the man is infected by the virus. This meme shows that a positive thing is not always a good thing for people, especially COVID-19. The meme maker creates it by relating to the condition of people in the world which become panic and afraid of being tested positive for Coronavirus. The meme entertains the reader since it uses wordplay, yet it also satirizes the present condition since being positive may mean negative because of the pandemic.

Conclusion

After discussing the five memes by considering context, content, and target of the memes and involving implicature to reveal the hidden meaning, the conclusion of this research can be drawn. This research concludes that the memes mostly imply the impacts of the COVID-19 pandemic in people's lives. Some of the memes also involves the use of similar words that have multiple meanings to create the humorous effect in the meme. The memes are also made to serve certain communication purposes. These memes are used to entertain the readers because they contain humorous elements. The memes are also used to inform and remind the readers to follow protocols of COVID-19 protocols. Furthermore, the memes do not also become a medium to express feelings towards the pandemic, but they also demonstrate satire about life in time of pandemic since the memes present certain condition but actually imply the opposite. This research suggests that memes can become a way of communicating ideas related to COVID-19 pandemic. Further studies may be conducted by involving more data and another different framework such as semiotics since memes mostly contain an image which also becomes an important element to be analyzed.

Lailahasanah251097@gmail.com¹, ninefebrie@gmail.com²

Universitas Abdurachman Saleh Situbondo^{1,2}

Abstract

Racism is an endless issue especially in America. The problems dealing with racism have been documented in some movies, including in movie Blackkkklansman. Accordingly, this research has three objectives: (1) to find out the kinds of racism done by Ku Klux Klan, (2) to find out the kinds of hatred displayed by Ku Klux Klan, and (3) to find out how Ku Klux Klan spread racism and hatred. In this descriptive qualitative research, the researchers used the theory on kinds of racism by Henry and Tator (2006), theory on kind of hatreds by Opatow and McClelland (2007), and theory on racism and hatred spread by Fredrickson (2015). The results show that there are three kinds of racism (institutional, internalized, and interpersonal) and three kinds of hatred (negation of intimacy: disgust, passion in hate: anger-fear, and decision commitment in hate: devaluation-diminution through contempt) that appeared in the movie. Ku Klux Klan spread racism and hatred through three methods: colonial ideology doctrine hereditary, religion justification, and racial group. Overall, from this movie it can be concluded that racism comes with hatred, but hatred is not always part of racism. To consider people racists or haters, we need to see from how they judge and treat others.

Keywords: Blackkkklansman, hatred, ku klux klan, racism

Introduction

American independence declaration in 1776 stated that all men are created equal and endowed with individual right derived from nature or reason (Britannica, 2021). However, the fact shows that few centuries later after the declaration of America, the problem of right inequality in America is still an issue (Solomon et al., 2019; Siripurapu, 2020). America seems really hard to accept multiracial society although there has been period change such as racial movements and racial laws. America is always closely related to its famous history about racism and hatred. The example is in 1970s, when the term “colored” is used for African American to differ European and African social background (Malesky, 2014). The term of racism refers to negative action of one dominating race to the inferior ones to show its domination by verbal or non verbal insult (Adawiyah, 2015). Besides, racism is accompanied by deep and passionate hatred againts the object of racism where the object of hate is seen as bad, immoral, dangerous, or all of this together (Staub in (Navarro et al., 2015).

The most well-known extreme racist group of America is Ku Klux Klan with their common image described as a group of hooded figures setting fire to a cross in the middle of the night with the intent to terrorize the locals into either doing or not doing something, especially to African-Americans, immigrants, and Jews. This group was also active in

spreading messages of hate to general public as well as their faithful followers (Mcelreath et al., 2019).

In this research, the researchers focused on the kinds of racism and hatred portrayed by Ku Klux Klan and the way Ku Klux Klan Spread racism and hatred in movie BlackKlansman. The researchers conducted this research to find the answers of the following problems: 1) What kinds of racism are portrayed by Ku Klux Klan in movie BlackKlansman?, 2) What kinds of hatreds are portrayed by Ku Klux Klan in movie BlackKlansman?, and 3) How did Ku Klux Klan spread racism and hatred in movie BlackKlansman?

Theory and Method

Theory

Racism

According to (Frederickson, 2015), the term “racism” is often used to describe the hostile or negative feelings of one ethnic group or people toward another which resulting from such attitudes. Meanwhile, (Tyson, 2006) writes on his book that racism refers to the unequal power relations that grow from the sociopolitical domination of one race by another and that result in systematic discriminatory practices (for example, segregation, domination, and persecution). Laeur in (Taufik & Hasniar, 2016) defines racism as the belief from some racial groups that are superior to other races, and racism has been commonly used to justify discrimination and inequality.

According to (Henry & Tator, 2002), racism is divided into two forms; individual and systemic racism. Individual racism occurs between individuals. The actions are the assumption toward someone, personal prejudice, a slur made, a person ignored in a social or work setting and also violence. Meanwhile, systemic racism includes the policies and practices in an established institution which results exclusion or promotion of designated group. Both these two forms are still divided into two sub-forms. Individual racism is divided into internalized racism and interpersonal racism. Internalized racism happens within individuals. It sets the negative beliefs about people of color. This racism also takes many different forms, including racial prejudice towards other people of a different race. Besides, this racism believes about superiority or entitlement by white people. Then there is interpersonal racism that occurs between individuals. On the other hand, systemic racism is classified into institutional racism (derived from individuals who carry out the dictates of prejudiced of others or of a prejudiced society), and structural racism that is rooted in the system-wide operation of a society that excludes particular groups from significant participation in major social institution.

Hatred

(Opatow & McClelland, 2007) say that hatred is the manifestations of unconscious motivations in prejudice, violence, dynamics, and international conflict. Meanwhile, Staub in (Navarro et al., 2015) explains that hatred is a strong, negative feeling against the object of the hatred. Hate can be one of a number of basic causes of massacres and genocides, or it can be used in a manipulative way to increase the likelihood of one race or ethnic occurrence (Sternberg, 2003).

(Sternberg, 2003) also explains the theory of duplex hate potentially comprises three components, those are Negation of intimacy: Disgust; Passion in hate: Anger–fear and Decision–commitment in hate: Devaluation–diminution through contempt.

How Racism and Hatred Spread

According to (Kendi, 2017) on his book entitled “Stamped From The Beginning: The Definitive History Of Racist Ideas In America” , the separate of racism and hatred againsts

non-white in America was much influenced by colonial period ideology continues until present. In this regard, “Black people” became the predominant objects of racism and hatred. In Aristotle’s human hierarchy theory, the rank of “Black people” is the lowest. Kendi further explains some reasons of racism and hatred separate in postcolonial period, those are:

1. Colonial ideology doctrine hereditary

Aristotle labeled Africans as burnt faces that in Greek calls Ethiopian and viewed the ugly extremes of pale or dark skins as the effect of the extreme cold or hot climates. On the contrary, Aristotle situated the Greeks, in their supreme, intermediate climate as the most beautifully endowed superior rulers and enslavers of the world. The journey of Columbus’s takes him to American Land. Over the years that followed, they used the force of the gun and the Bible in one of the most frightful and sudden massacres in human history. Thousands of Native Americans died resisting enslavement. More died from European diseases, from the conditions they suffered while forcibly tilling fields, and on death marches searching and mining for gold.

Some of White American race kept up the different level of White and Black people. As the result, White American mind consume with racist ideas that individualized White negativity and generalizing Black negativity. Negative behavior by any Black person became proof of what was wrong with Black people, while negative behavior by any White person only proved what was wrong with that person.

2. Religion justification

The Puritans and its faithful followers used Aristotle’s theory and religion verses to justify enslavement. Slaves were to obey in everything those that the earthly masters, not with eyeservice as men-pleasers, but in singleness of heart, fearing the Lord. Since African people were baptized to be Christian, all slaves were dictated to be faithful Christian followers by obeying their masters. More and more enslavers began to listen to this argument to be faithful Christian follower. Another dictate says that all slaves were encouraged and ordered to become more humble and better servants.

3. Racial group

In the late eighteenth century, the Black People started a rebellion against their right equality. Their rebellion supported by anti-racism society even from White people that encourage Black People fight for their human right and equality. These White racists were called White supremacy that freedom fight against slavery. The oldest group of Southern extreme racist group was Ku Klux Klan. The Ku Klux Klan was founded originally in 1865 as a social club in Tennessee that made a charade of the «profound peace». The Klan commenced a «reign of terror,» assassinating Republicans and barring Blacks from any rights of public participation.

Method

The researchers used a descriptive qualitative method to identify the kinds of racism and hatred and the way racism and hatred separated by Ku Klux Klan based on Ku Klux Klan members’ utterances, gestures, and behaviour. The source of data in this research was movie BlackKlansman released in 2018. The researchers used theory from (Spradley, 2016) in “Participant Observation” as the technique of data analysis. There are four steps according to Spradley’s theory. First is domain analysis, a category of cultural meaning that includes other smaller categories. Second is taxonomic analysis as a set of categories organized on the basis of a single semantic relationship. The third, componential analysis is the systematic

search for the attributes (components of meaning) associated with cultural categories. The final step in ethnographic process is cultural analysis. Cultural analysis is used to draw the conclusion in componential analysis to find out final result of the findings.

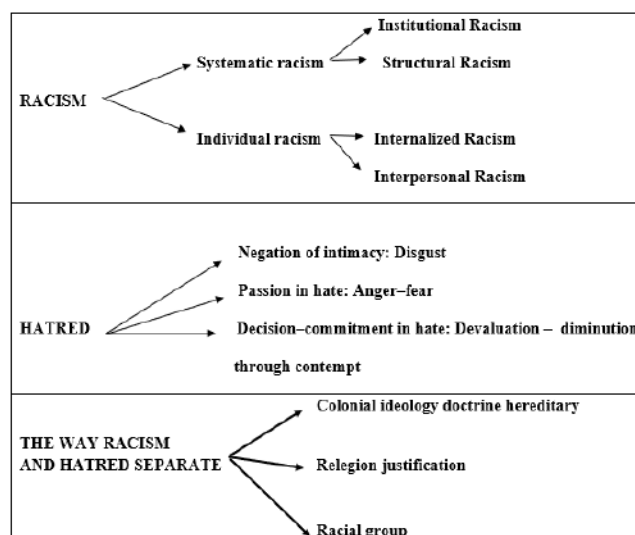

Findings and Discussion

Findings

Domain analysis

In domain analysis, the researchers divided the kinds of racism based on Henry and Tator's classification in (Madula et al., 2017). The kinds of hatred were classified based on (Sternberg, 2003) theory and (Kendi, 2017) theory to explain the way Ku Klux Klan spread racism and hatred.

Figure 1. Classification of racism and hatred *Taxonomic analysis*

In taxonomic analysis, the researchers collected fifty data of kinds of racism identification, forty-two data as hatred identification and eighteen data of the way Ku Klux Klan spread racism and hatred in which those data have been classified into each type. Each single data can possibly be included into more than one classification. The researchers only displayed one datum of each kinds of racism, hatred, and the way Ku Klux Klan spread racism and hatred as examples.

a. Kinds of Racism by Ku Klux Klan in movie *BlacKkKlansman*

There are two kinds of racism found. They are systematic racism (institutional racism and structural racism) and individual racism (internalized racism and interpersonal racism). Each of them is followed by one example.

i. Systematic Racism

• Institutional Racism

This form of racism appeared twenty six times and one of them are presented below.

Beauregard- Klan Narrator: "The Brown decision forced upon us by the Jewish controlled puppets on the U.S. supreme court compelling white

children to go to school with an inferior race is the final nail in a Black coffin towards America becoming a mongrel nation". (Racism, Data 1, Min = 02:14 – 02:38)

This scene shows Beauregard has a speech on his documentary film project. Beauregard was a klan narrator who often espoused racist vitriol against minorities, especially Blacks and Jews. On the footage, Beauregard comically fumbled a hate-filled screed decrying minorities. He said "The Brown decision forced upon us by the Jewish controlled puppets" as the prejudiced expression againts Jewish. He also dictated other white Christian people to be watchful againts Jews. Besides, Beauregard also said "go to school with an inferior race is the final nail in a Black coffin towards America becoming a mongrel nation"as the expression to dictates people to believe all black people are inferior, uneducate, and dangers to stay in America that affect the harmony life of white people.

ii. Individual Racism

- Internalized Racism

This form of racism appeared twenty five times and two of them are presented below.

Connie: "I read in The Gazette some Nigger named Carmichael held a rally and there's some college Nigger girl with the "Baboon Student Union" attacking our Police. This girl is dangerous. Reminds me of that Commie Angela Davis. We need to shut her damn mouth". (Racism, Data 17, Min = 49:46 – 50:02)

This dialogue occurs at Connie's house when the Klansmens had a meeting about attacking black people and cross burning. Then, Connie stopped their meeting and gave the newspaper clips about black student union news where the news stated that balck student union attacked white police officers. According to (Cambridge Dictionary, 2021) the word "nigger" is used as an insulting and contemptuous term for a member of any dark-skinned race. Connie also said "baboon student union" to represent black people color by compating them to baboon. In 1980s, racism case in America was still high and it affected the media such as newspaper. As well-known, the scene shows Connie reading a magazine and finding an article about black student union. The narration told that the black people attacking police officers set a negative feeling that all black people were dangerous.

- Interpersonal Racism

There are ten data belonging to this form. Here is the example:

Figure 1. All Klansmen Stared and Smirked at Ron Stallworth (Racism, Data 36, Min = 01:32:06 – 01:32:09)

This scene shows Ku Klux Klan biases affected their public interaction towards Ron Stallworth as black police officer. Their behaviour showed that they were anti-black people by staring and smirking at Ron Stallworth. They were also watchful and humiliating against Ron Stallworth at the same time.

b. Kinds of Hatred by Ku Klux Klan in movie *BlacKkKlansman*

There are three kinds of hatred: negation of intimacy: disgust, passion in hate: anger–fear, and decision–commitment in hate: devaluation–diminution through contempt.

i. Negation of intimacy: disgust

Negation of intimacy: disgust appeared nineteen times in movie *BlacKkKlansman*. The example is as follows.

Connie: “I read in The Gazette some Nigger named Carmichael held a rally and there's some college Nigger girl with the "Baboon Student Union" attacking our Police. This girl is dangerous. Reminds me of that Commie Angela Davis. We need to shut her damn mouth”. (Hatred, Data 16, Min = 49:46 – 50:02)

The dialogue contains a negation of intimacy: disgust because of two reasons. The first reason is the sentence “Baboon student union” that refers to Black student union. Thus, Connie compares black people with animal (baboon). However, her hatred feeling affected her words production, such as comparing people to animals. The second, when Connie said the phrase of “attacking our police” and told the Klansmen with anger without cross-checking the fact of the news.

ii. Passion in hate: anger–fear

The data of this kinds of hatred appeared thirty four times. Here is one of the examples.

Walter : “All you get now is how we gotta' cater to them. We gotta' get us some "Minorities". Watch ya' mouth, don't say this, don't say that, be nice, they're not Colored....”

Felix : “Negros...”
Ivanhoe : “...Blacks...”
Walter : “...Afro-Americans...”
Flip : “...FUCK. How 'bout just fuckin' Niggers. Make it Fuckin' simple.”
All : “NIGGERS!!!”
(Hatred, Data 15, Min = 40:29 – 40:47)

It can be seen from the data that they emphasized the black callings such as Negros, blacks, Afro-American, and the worst one was niggers. The Klansmen felt nauseated against black people and for whatever they did. Thus, when Walter said “minorities”, it gave signs that black people were a big threat for white people as the majority in America. This scene occurred when Flip just arrived in the secret room of Ku Klux Klan.

- iii. Decision–commitment in hate: devaluation–diminution through contempt
Decision–commitment in hate: devaluation–diminution through contempt appeared twenty-eight times and one of them is as follows.

Walter : “All you get now is how we gotta' cater to them. We gotta' get us some "Minorities". Watch ya' mouth, don't say this, don't say that, be nice, they're not Colored....”
Felix : “Negros...”
Ivanhoe : “...Blacks...”
Walter : “...Afro-Americans...”
Flip : “...FUCK. How 'bout just fuckin' Niggers. Make it Fuckin' simple.”
All : “NIGGERS!!!”
(Hatred, Data 15, Min = 40:29 – 40:47)

This datum shows how Klansmen felt contempt against black people. The conversation was opened by Walter and enrolled by the Klansmen. In the opening conversation, Walter said minorities that referred to black people. He devaluated the black people by telling the Klansmen about the black people activities that almost seized white people's position. As the result, the response from Klansmen were ignited with anger and hatred.

- c. The way Ku Klux Klan spread racism and hatred
There are three ways Ku Klux Klan spread racism and hatred in movie BlackKlansman, those are: Colonial ideology doctrine hereditary, religion justification, and racial group.
i. Colonial ideology doctrine hereditary
This ideology taught hereditary by (white) racist people to set others' (white) mindset Here is the example:

Beauregard- Klan Narrator: "The Brown decision forced upon us by the Jewish controlled puppets on the U.S. Supreme Court compelling white children to go to school with an inferior race is the final nail in a Black coffin towards America becoming a mongrel nation". (Data 1, Min = 02:14 – 02:38)

This is the clip where Beauregard doctined other white Americand by giving a speech on his documentary film project. Beauregard was a Klan narrator who often espoused racist vitriol against minorities especially, blacks and Jews. On the footage he doctined people by saying "the Jewish controlled puppets on the U.S. supreme court compelling white children to go to school with an inferior race was the final nail in a Black coffin towards America becoming a mongrel nation" to make sure how worst Jewish and Black people. He also dictated other white Christian people to be watchful against Jews. Besides, Beauregard also said "go to school with an inferior race is the final nail in a Black coffin towards America becoming a mongrel nation" as the expression to dictates people to believe all black people were inferior, uneducated, and dangers to stay in America that affect the harmony life of white people.

ii. Religion Justification

Religion is used to justify racist action against the target of racism. Religion justification has been used since colonial period until present. Here is the examples

Beauregard- Klan Narrator: "Using an Army of outside Northern Black Beast Agitators determined to overthrow The God Commanded and Biblically inspired Rule of The White Race". (Data 1, Min = 03:42 – 03:47)

On the footage, Beauregard doctined white people that none of white race deserved level as same as white race. If not, they had been overthrown the God's command and biblically inspired rule of the white race.

iii. Racial Group

Racial group existed to unite people with the same frequencies and invited other people to have the same mindset and ideology. Ku Klux Klan is one of famous American extreme racial group that target non-white people especially Black and Jews. Here is the example:

*Walter : "I've had my own share of Run-Ins with
Niggers. Matter of fact, it's part of what led
me to The Organization".
Flip : "That right?"
(Data 1, Min = 03:42 – 03:47)*

This conversation occurred in Ku Klux Klan's headquarter where Flip was just mingled with other klansmen. Walter as a klansman shared his reason to join Ku Klux Klan and also shared his racist experience to others klansmen. This racial group will get stronger by consuming racist and hatred ideology and doctrine.

Componential Analysis

Componential analysis is to show the frequency occurrence of racism and hatred by Ku Klux Klan in movie BlackKlansman based on the movie structure. The result is displayed into a table and the result was counted to find out the conclusion in cultural theme analysis.

Table 2. Componential analysis of racism and hatred and the spread of racism and hatred

Racism		Hatred			Spread			Total	
		<u>Noi</u>	<u>Pih</u>	<u>Dcih</u>	<u>Ci</u>	<u>Ri</u>	<u>Rg</u>		
Sys-R	Ins-R	26	12	20	15	16	1	14	78
	Str-R	0	0	0	0	0	0	0	0
Ind-R	Int-R	25	17	18	7	8	1	20	71
	<u>Inp-R</u>	10	6	5	0	1	0	3	15
Total		35	43	22	25	2	37	164	

From Table 2, it can be concluded that there are 164 data collected from the movie BlackKlansman. The results of hatred and spread of racism and hatred data come from racism data in which one data of racism can be included into more than one data classification of hatred and spread of racism and hatred.

Systematic racism (Sys-R) is divided into institutional racism (Ins-R) and structural racism (Str-R). Ins-R has twenty six data and Str-R has zero data. Thus, twenty six data of Ins-R contain Hatred data which are classified into three kinds of Hatred, those are negation of intimacy (Noi) has twelve data, passion in hate (Pih) has twenty data, and decision-commitment in hate (Dcih) has fifteen data. Besides, Ins-R also contains spread racism and hatred, those are colonial ideology (Ci) is sixteen data, religion justification (Rj) is one datum, and racial group (Rg) is fourteen data. Total data collected is seventy eight data.

Individual racism (Ind-R) is divided into internalized racism (Int-R) and interpersonal racism (Inp-R). Int-R has twenty five data and Inp-R has ten data. Thus, twenty five data of Int-R contain Hatred those are Noi has seventeen data, Pih is eighteen data, and Dcih is seven data. Besides, Int-R also contains spread racism and hatred, those are Ci is eight data, Rj is one datum, and Rg is twenty data. Total data collected is seventy data. Meanwhile, Inp-R contain Hatred those are Noi has six data, Pih is five data, and Dcih is zero. Besides, Inp-R also contains spread racism and hatred, those are Ci is one datum, Rj is zero, and Rg is three data. Total data collected is fifteen data. Therefore, it can be concluded that dominant data of racism is individual racism (Ind-R) with total thirty-five data. The dominant data of hatred that contains racism is passion in hate (Pih) with total data forty three. The second highest data is negation of intimacy (Noi) with total data thirty-three, and the third highest data is Decision-commitment in hate (Dcih) with total data twenty-two data. The, the dominant data of spread of racism and hatred that relates to racism is racial group (Rg) with total data thirty-seven. The second highest data is colonial ideology (Ci) with total data twenty-two, and the third highest data is religion justification with total three data. The data in Table 2 shows the movie BlackKlansman is worth analyzing because it gives relevant and accurate data

related to the research objective shown from the frequency occurrence of kinds of racism and hatred in movie *BlacKkKlansman*.

Cultural Theme Analysis

The conclusion from componential analysis shows that the relation between each research question is bounded. Racism affects hatred and the spread of racism and hatred through target people or group. The dominant kind of racism portrayed by Ku Klux Klan in movie *BlacKkKlansman* is individual racism (Ind-R) in the form of internalized racism (Int-R) with total twenty-five data. The racism data that are included to hatred have dominant occurrence in passion in hate (Pih) with total forty three data. Then, racism data that include spread of racism and hatred has dominant occurrence in racial group (Rg) with total data thirty-seven.

Discussion

From the finding section, the researchers find three forms of racism out of four form of racism and the dominant occurrence of racism shown by Ku Klux Klan is internalized racism. It can be seen from data in Table 2. Meanwhile, from three kinds of hatred, passion in hate: anger-fear becomes the dominant occurrence shown by Ku Klux Klan. The dominant ways to spread racism and hatred by Ku Klux Klan is by racial group.

This research finds kinds of racism by Ku Klux Klan in movie *BlacKkKlansman* such as institutional racism (twenty-six times), structural racism (zero), internalized racism (twenty-five times) and interpersonal racism (ten times). This finding is similar to (Idris, 2017) finding research show that individual racism, institutional racism, and interpersonal racism are also occurred in his research. He also finds a form of racism that including to racial attitudes. The differences occurs that researcher does not find structural racism on her research while in Idris does and the dominant occurrence belongs to racial attitudes while the researcher dominant occurrence belongs to internalized racism. The second previous research belongs to (Syafrohy, 2012) that his finding shows that white supremacy spread racism against blacks by religious context and political diplomacy. It is similar to researcher's finding where she found Ku Klux Klan (white supremacy) using religious context to influence other white Christian people and to recruit new Klansmen's. The difference is used the theory of Fanon and the researcher used the theory by Kendi and Syafroni's os on the detail of white supremacy circle against black people.

Conclusion

Racism cannot be separated with hatred because racism is over-emotion of hate against the target of racism. Each kind of racism has a specific identification, for the example is internalized racism which not only takes forms of the believe of people superiority and entitlement, but also negative believe about people of color. This is what commonly occurs between the racists and the target of racism. However, racism is just like a roller coaster that will boast the feeling of hate towards the racist. In the end, the researchers emphasize that racism definitely came with hatred, but hatred is not always be part of racism. To find out whether people are racists or haters, it can be seen from the way how they judge and treat others.

Abstract

The murder of George Floyd, an African American, by police officers in Minneapolis, USA in 2020 raised the #blackouttuesday hashtag and Black Lives Matter (BLM) posts on social media such as Instagram. People all over the world uploaded a pitch-black picture with the hashtag, including the world's top actress Emma Watson. Many people (netizens) have left comments on her post since then. They conveyed their thoughts and views about the case. In other words, netizens expressed their attitude towards BLM through the comments. This research will examine how netizens’ attitudes on Watson’s post about BLM are realized by employing Appraisal system in Systemic Functional Linguistics framework (Martin and White, 2005). The research focuses on analyzing Appraisal - Attitude elements namely Affect, Judgment, and Appreciation in the comments of Watson’s post on June 3rd 2020. This research used a qualitative descriptive method. The results reveal Affect deals with the netizens’ emotional reaction towards Emma Watson and BLM case, Judgment with netizens’ thought towards Watson’s support to BLM movement, and Appreciation with netizens’ evaluation towards BLM movement. This research suggests that netizens need to be wiser in expressing their point of view towards a particular issue when posting on Instagram or leaving a comment on Instagram posts.

Keywords: appraisal, attitude, BLM, Instagram, Systemic Functional Linguistics

Introduction

Lately, people have been using Instagram for sharing not only their activities or moments, but also important information, vision, mission of some communities, and opinion about some cases. As an instance, a few months ago, there was a global issue about black people in America who died by the police. It is George Floyd who died in Minneapolis, U.S.A. on Monday. This news becomes very popular on many online platforms especially on Instagram. A lot of people posted their opinion about the issue using Instagram story and posted blank pictures in Instagram. An international actress Emma Watson also wrote her opinion about this case and her support to black people around the world. The actress wanted to help black people around the world to get equal justice and rights. That is why she spoke up and did a campaign for the BLM movement on Instagram. On 2020 3rd June, she posted her opinion on Instastory and black border with hashtag #blackouttuesday #theshowmustbepaused #amplifymelanatedvoice #amplifyblackvoice. More than a thousand people left their comments on Watson’s post. Her followers on Instagram from around the world also gave pro and contra opinions about this issue.

This study is aimed at investigating the realizations of appraisal system that appear in the comments of Emma Watson’s official Instagram account, since there are various comments that have been expressed by many netizens’ from different point of views. In this study, the authors focus on analysis the attitudinal system of appraisal which consists of affect, judgement, and appreciation. Appraisal deals with interpersonal meaning in Systemic Functional Linguistics (SFL).

Several studies on appraisal have been done previously. Pusparini, Djatmika, and Sentosa (2017) discuss how the appraisal system affects the readers. This study uses the whole appraisal framework to indicate the reader's reaction to that news. According to the appraisal system which appears in that news, it has a function that is used by journalists to improve their writing and avoiding misconceptions about concluding by readers. Another study was conducted by Yuningsih (2018). She analyzes the interpersonal meaning contained in the lyrics of one of South Korea's top band's songs, CNBLUE. The result of the study finds that the dominance of affect shows the unhappiness expressed by the composer through the lyrics of his creation, while judgement and appreciation are shown with the same percentage. It is also concluded that the appraisal framework implemented in the study reveals interpersonal meaning, such as Affect that identifies feelings composer's emotion by their lyric, Judgment of the composer towards the behavior of people or someone, and Appreciation involves evaluation of phenomena. A research on appraisal focusing on EFL class was conducted by Cahyono and Setyaningsih (2019). They focus on analyzing and interpreting students' writing tasks. They conclude that lecturer mostly produced judgment that deals with the evaluation of student ability and writing skills. Lecturer gives positive and negative judgment on students' tasks such as by criticizing or suggesting. Negative appreciation is mostly given and affect is the least used as the lecturer wants to be objective and tries not to show his personal feelings towards the students' writings.

In this paper, the authors will analyze the comments of Instagram users on Emma Watson's Instagram to find the users' attitude on Black Lives Matter. The difference between this study and those related studies above is that there are no previous related studies that took data from Watson's Instagram comments. Furthermore, here the authors would like to find out how Internet users, or netizens, express their attitude in a computer mediated communication especially in the Instagram comments of Emma Watson's post about Black Lives Matter. In the era of Internet, people are likely to express their ideas more freely and boldly especially in Instagram comment. Therefore, it will be useful to analyze how netizens show their attitudes online.

Theory and Method

Systemic Functional Linguistic (SFL) is an approach to linguistics that considers language as a social semiotic system (Halliday, 1961). Halliday (1994) explains that there are three meta-functions that primary to analyze a language; ideational meaning (it is about phenomena), interpersonal meaning (expressing a speaker's attitude), and textual meaning (expressing the relation of language to its environment). In interpersonal meaning, the language is used to reveal social reality and interaction between speaker/writer and listener/reader (Matthiessen, 1992/1995: 6; Martin, 1992). Martin & Rose (2005) say that appraisal is a system that contains in interpersonal meaning which concerned with evaluation-the kinds of attitudes that are negotiated in the text, the strength of the feeling involved, and how value is sourced and readers aligned.

The appraisal framework explains how the taxonomy of the language is employed in communicating evaluation, how the users convey attitude (emotion, judgement of people and appreciation of objects). Appraisal consists of three main categories, namely *engagement* (assessment of the evaluation of other people), *graduation* (how the writers may modify the strength of their engagement), and *attitude* (emotion, judgement of people and appreciation of objects). The three categories have their respective subcategories as can be seen in the following figure:

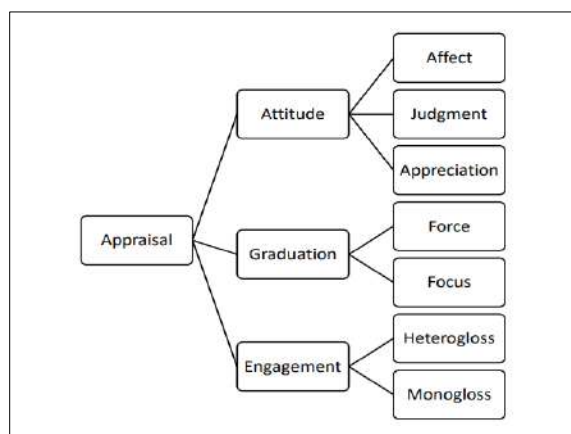

Figure 1: Appraisal Diagram (Martin & White, 2005)

While the Appraisal-Attitude can be broken down into the following subsystems:

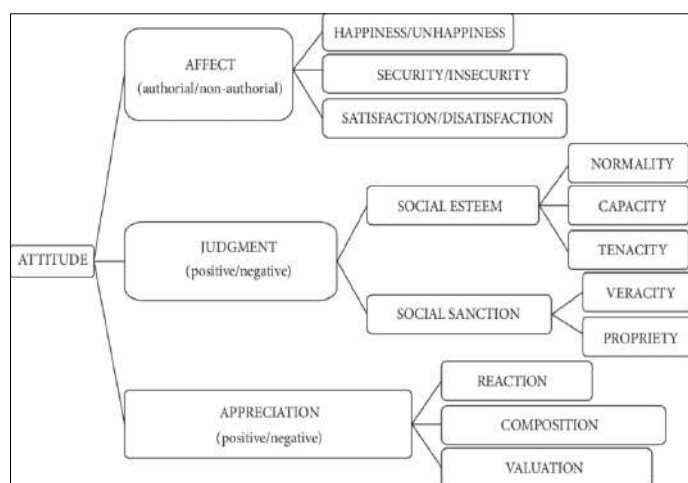

Figure 2: Attitude Subsystems (in Yuningsih, 2018)

Affect (emotion) is concerned with positive and negative feelings, whether someone feels happy or sad, confident or anxious, interested or bored. It also can be expressed directly or indirectly based on the situation and is divided into three major sets: Un/happiness concerns with happiness, sadness, and love; in/security concerns with social life such as trust, fear, and confidence; and dis/satisfaction with the pursuits of goals such as ennui, interest, and furious (Martin & White, 2005). Judgement (ethics) deals with attitudes towards behavior, whether someone admires, criticizes, praises, or condemns. It also concerns on how people should and should not behave. Judgement is divided into social esteem and social sanction (Martin & White, 2005). Appreciation (aesthetics) involves meanings construing evaluations of things and performances. It also includes how someone value things. Appreciation can be divided into reactions to things (whether they are pleasing or catch attention), composition (balance and complexity), and value (how innovative, authentic, timely, etc.) (Martin & White, 2005).

To analyze the attitude in Emma Watson's Instagram comments, this study used a descriptive qualitative method to analyze and describe the data. Creswell (1994) states that descriptive qualitative method focuses in process, meaning, and understanding obtained through word or pictures. The source of the data in this study is the comments in the official

Instagram account of Emma Watson on 3 June 2020. The data were collected by transferring the Instagram comments to Microsoft Excel. As many as 445 comments consisting of 206 clauses and 239 emojis respectively were found in Watson's Instagram account related to the issue of racism and George Floyd's death. However, it is worth noting that this study excluded the emojis in the comments. Therefore, only clauses in the comments were classified and analyzed based on the theory of the attitudinal system.

Findings and Discussion

After analyzing the data, the authors found the appraisal-attitude realized on Emma Watson's Black Lives Matter Instagram post. The table below provides the result of the analysis.

Table 1: Attitude Realizations on Emma Watson's BLM Instagram post

Attitude Subsystem	Types	Positive/Negative			Subtotal	Percentage
			Σ	%		
Affect	<i>inclination</i>	(+)	2	1	2	1
	<i>happiness</i>	(+)	28	13.6	29	14.1
		(-)	1	0.5		
	<i>security</i>	(+)	13	6.3	16	7.8
		(-)	3	1.5		
	<i>satisfaction</i>	(+)	16	7.8	44	21.4
(-)		28	13.6			
Subtotal of Affect					91	44.2
Judgment	<i>Social esteem</i>					
	<i>normality</i>	(+)	2	1.0	2	1
	<i>capacity</i>	(+)	12	5.8	20	9.7
		(-)	8	3.9		
	<i>tenacity</i>	(+)	9	4.4	10	4.9
		(-)	1	0.5		
	<i>Social sanction</i>					
	<i>veracity</i>	(-)	1	0.5	1	0.5
	<i>propriety</i>	(+)	20	9.7	34	17
(-)		14	6.8			
Subtotal of Judgment					67	33
Appreciation	<i>reaction</i>					
	<i>impact</i>	(+)	13	6.3	16	7.8
		(-)	3	1.5		
	<i>quality</i>	(+)	10	4.9	14	6.8
		(-)	4	1.9		
	<i>composition</i>					
	<i>valuation</i>	(+)	8	3.9	18	8.7
(-)		10	4.9			
Subtotal of Appreciation					48	23.3
TOTAL OF APPRAISAL - ATTITUDE					206	100

According to the table above, the frequency of the Appraisal Attitude system that is mostly used by netizens is Affect (44.2%), followed by Judgement (32.5%), and Appreciation (23.3%). Affect is used by netizens to express their love and support towards BLM movement and Emma Watson. However, there are also negative Affects used by netizens to

show their disappointment towards Emma Watson as activist. Meanwhile, affect-disinclination, judgment-negative normality and positive veracity, appreciation-balance and complexity are not found in the data. Furthermore, how netizens use the Appraisal Attitude system in the comment will be discussed below.

Affect

There are several positive and negative comments containing appraisal of affect, and these netizens expressing their positive emotion to show how happy they are about Watson's support for black people and about Watson herself. While the negative affect deals with netizens expressing how disappointed they are towards Watson's effort to support black people. Some examples about how netizens use the items of affect will be provided below:

Excerpt 1

...Be *glad* the world is speaking up about it ...

The word "glad" here expresses the positive affect of happiness. The Instagram user uses that expression to indicate her happiness and gratitude towards the BLM issue. Cynt**** (user) wrote it to show her feelings about how angry American are and they are demonstrating across the country because of the violence and brutality of the police officers in Minneapolis while on duty. Not only were American angry with the case of George Floyd's death, but the entire world was also mourning and campaigning to defend black people who have almost the same fate as George Floyd. In this case, the appraised item is people around the world.

Excerpt 2

...but *sad* to know...

The user (an3****) here expresses negative affect by showing her sadness towards what happened to white people and farmer in South Africa. She felt it because the world did not know what truly happened with them and no one cared about them. The appraised item is white South Africans and the word "sad" indicates negative affect of unhappiness.

Excerpt 3

Congratulations and thank you...

The expression "congratulations and thank you" from doy**** (user) signifies that he is satisfied and grateful with what Emma Watson has done as an artist and activist. His expression indicates positive affect of satisfaction. In this case, the appraised item is Emma Watson.

Excerpt 4

...*I hope you are better than this.*

Through the excerpt above, emm**** (user) conveys her disappointment towards Emma Watson and it means that her expression refers to the negative affect of dissatisfaction. The comment indicates that she expected more from Emma since she is an international artist and also an activist with many platforms to help and support the victims. The appreciator here is emmba210 and appraised Emma Watson.

Excerpt 5

Say no to racism..

The word “say” indicates positive affect of security. The user conveys his expression to support black people in America. In this case, adikar**** (user) appraised black people since they were often mistreated by the society around them.

Excerpt 6

People *shading* emma just because of the white border

The expression “shading” expresses the negative affect of insecurity. The user (mz.k****) expresses it to show her feelings, why a lot of people on Instagram keep writing negative comments just because Emma Watson uploaded a black square with white border. The white border itself might be a mistake from Emma Watson while cropping, before she posted it. The appraised item is netizens.

Excerpt 7

Hoping...

The user (mz.k****) conveys her feeling with the word “hoping”. It refers to positive affect of inclination. She felt the condition at that time were really chaotic coupled with the corona pandemic made many people are miserable and the occurrence of the racism case also adds the suffering to black people. In this case, the user (mz.kendeii) appraised people around the world.

Judgement

According to the result of data analysis, netizens often judge Emma Watson with two different perspectives, positive and negative. The positive judgement indicates how netizens express their thought towards what Emma Watson has done, by comforting and supporting Watson’s effort. Meanwhile the negative judgement shows how netizens hate and are contra towards Watson’s effort to support BLM.

Excerpt 8

...you were born to shine. In a world full of hate, be a light

Comment from brad**** expresses the positive judgement of capacity. He wrote it to judge Emma as an artist and activist with so many fans around the world, she must do good thing to help them who suffer. She could use her platform to support and help them to enforce injustice. The appreciator is the user and appraised Emma Watson.

Excerpt 9

Stupidity at it's finest moment

The expression “stupidity” refers to negative judgement of capacity. The user (sand****) used it to judge Emma since he felt Emma just did something stupid by posting black picture just to support BLM, while as an activist she should have done more than just posting a black picture.

Excerpt 10

What a pathetic and uninspired gesture...

The user (addis****) judged Emma Watson as a pathetic person and uninspired gesture. The comment expresses the negative judgement of propriety. In this case, the user shows that she is so mean by writing the comment to hurt someone feelings.

Excerpt 11

Don't listen to the haters

The user (heave****) wrote the expression to convey her concern towards Emma Watson. She expresses the positive judgement of propriety. The user expresses how much she loves Emma, and supports her to do activism, in this case to help black people in the BLM movement.

Excerpt 12

Fake news

The comment “fake news” refers to negative judgement of veracity. The user (ev.vo****) expresses it to indicate that BLM movements are fake and just manipulation of certain parties.

Excerpt 13

We are all the same

The expression written by hermi**** expresses the positive judgement of normality. In the comment above she tried to convey that humans are all the same even though there are various human races, colors, languages, etc. Humans are human and no one can judge that certain race is the best. The appraised item here is human.

Excerpt 14

Im always on emma watsons side. ...

The expression shows that this user (vinc****) would be loyal to Emma Watson as fan of her. It refers to positive judgement of tenacity. The user conveys it to support his idol in every condition to give her positive energy and to share love.

Excerpt 15

...,hahaha!

The expression above indicates negative judgement of tenacity. The user (mar****) laughed because she did not think that if an international celebrity posted black picture, it would stop racism. In this case the user judged Emma Watson as being unreliable to support racism.

Appreciation

Appreciation deals with how netizens' reacted towards Watson's effort as an activist could amazed many people and how netizens' appraised equality as important things for everyone.

Excerpt 16

Emma you rock...

The comment from the user (jayr****) expresses the positive appreciation of impact. Jayroberts868 conveys his feelings to show that he is bewitched with Emma. In this comment the user appraised Emma Watson.

Excerpt 17

The white border *don't sit right* with me

The user (aesth****) expresses her reaction towards the white border that appears in the BLM campaign. In here the user expresses it to show how she felt that the campaign become uninviting because the white border undermines the purpose of the campaign. The expression “don't sit right” in the comment indicates the negative appreciation of impact.

Excerpt 18

Emma you are so *kind hearted*...

In this comment the user (cotton****) conveys reaction towards Emma Watson as she cared about racism issue. She also appraised Emma with positive comment that refers to the positive appreciation of quality.

Excerpt 19

Pathetic

The expression “pathetic” indicates the negative appreciation of quality. It is shown by the user (rx_1hun****) that she reacted like that since the campaign seemed off-putting.

Excerpt 20

Black lives matter

The expression from the user (nystro****) indicates that black people deserve to live without threads just because their race is different. It shows that the user supports BLM movement to help black people get their right to live in USA. The word “matter” expresses the positive appreciation of valuation and appraised black people.

Excerpt 21

This is *useless* lol

The reaction from (justrab****) shows that the campaign using a black picture was not useful since the black picture would not help the victim. This expression “useless” indicates negative appreciation of valuation, and the appraised item is the black-square picture.

Conclusion

This research has a goal to reveal the realizations of appraisal system particularly on netizens' (Instagram users) attitude in Emma Watson's Black Lives Matter Instagram post. The Appraisal subsystem of Affect is the dominant attitude since it is mostly expressed by netizens. Netizens often express their attitude of affect in positive and negative comments. Since the positive attitude of affect outweighs the negative attitude of affect, it means that a

lot of netizens felt glad with the existence of Black Lives Matter and the support from Emma Watson for black people. In contrast to the positive attitude of affect, the negative attitude of affect shows that netizens felt dissatisfied with Emma Watson's effort to support black people. They were dissatisfied because Emma Watson just posted a black picture with a white border to support black people. It can be concluded that in Emma Watson's BLM Instagram post, Affect concerns with the netizens' emotional reactions towards Emma Watson and BLM case, Judgment with their thoughts towards Watson's support to BLM movement, and Appreciation with their evaluations towards BLM movement. Furthermore, this research suggests that netizens need to be more careful and wiser when they deliver their points of view towards certain issue on Instagram or when leaving comments. It is also suggested that future research involve other appraisal subsystems in order to obtain more comprehensive results.

Universitas Teknokrat Indonesia^{1,2}

Abstract

This study is aimed at investigating transitivity properties (Processes, participants, and circumstances) of news report on Covid-19 of *Jakarta Post* press. It further explored how the writers encode experiential meaning in the texts. This study draws on Systemic Functional Linguistics (SFL) theory. The data for the study consisted of five randomly selected topics from *Jakarta Post* press, a daily English in Indonesia. The data were gathered through a library study. These data were qualitatively analyzed using Halliday (1994) and Halliday & Matthiessen (2014) theory. The results show that all of processes types were found in the texts, namely material process, mental process, verbal process, behavioral process, relational process, and existential process besides, material process was used dominantly. The implications of this study were also elaborated.

Keywords: Systemic Functional Linguistics, Transitivity processes, *Jakarta Post* press.

Introduction

People communicate through language, which is made up of morphemes, words, sentences, and utterances, and can be spoken or written. Wiratno (2018) stated that language is always a text. People achieve goals of communication by conveying information with certain texts Satriani (2018), Putri et al, (2021), and Suprayogi & Ivana (2020). People were informed through one of the example online media, such as online news, magazines, and so on. Online news staffs compose information based on current events in society, which keep readers interested in reading. The *Jakarta Post* is an online news source that provides readers with a lot of relevant information. *Jakarta Post* is an Indonesian news website. It provides the most up-to-date national and international information. Now day online news also give information about Covid-19 since the Covid-19 case was first discovered in November 2019 in China. The virus that causes Covid-19 is called SARS-CoV-2, and it is a kind of Coronavirus (Yasendalika, Sawirman, & Marnita, 2020). SARS-CoV-2 first infected a resident of Wuhan, China. The virus has spread so rapidly since then that the Chinese government has planned to lockdown Wuhan on January 23th, 2020. The globe was stunned by the news. It was widely reported in the international media, particularly in Indonesia.

To achieve the goals of communication, the text must have linguistic forms. In the text, these types are referred to as linguistic systems. The Systemic Functional Language approach is one way to analyze text (SFL). Systemic Functional Linguistics (hereafter *SFL*) is a way to analyze how language works or functions in doing communication proposed by Halliday & Matthiessen (2014). SFL is a method for analyzing a text at multiple levels, ranging from lexicon-grammatical to text structure, and discourse, semantic can also is revealed. Halliday & Matthiessen (2014) offered that a language has three different meta-functions meaning, namely ideational meaning (field), textual meaning (mode), and interpersonal meaning (tenor). Ideational meaning is one of Halliday's meta-functions theories. Halliday & Matthiessen (2014) conveyed that ideational meanings are concerned with the construction of a model of experiences. Ideational meaning refers to a person, an event, a phenomenon, an

action, a situation, etc. This metafunction could be used to examine the text in order to determine how texts and meaning are generated. Thompson (2014) in Kuswoyo & Rido (2019) argues that the ideational meaning of transitivity is expressed on the processes, participants, and conditions. The clause structure in representing ideational meaning is discussed in linguistics: It's referred to as transitivity when it comes to experiential meaning.

Halliday & Matthiessen (2014) described that transitivity is a tool for interpreting our experiences in terms of process configurations, participants, and condition. In general, transitivity refers to how the clause's meaning is expressed. Furthermore, transitivity is a grammatical system that takes into account world skills developed through the process, participants, and circumstances. A). Processes (in the verbal group). B).Participants (human/non-human) who are participated in these processes (in the noun group). C).Circumstances in which the processes occur and when, where, and how they take place (in the prepositional phrase and adverbial group). In transitivity, various types of processes have been recognized. These types are material process, behavioral process, mental process, verbal process, relational process, and existential process. Transitivity processes can also be used to identify the participants, such as how the speaker or researcher places herself in relation to the other and if they play an active or passive role in communication.

Table 1: Process types, their meaning and the key participants Halliday (1994)

Process Types	Category meaning	Participants
Material Process: Action, Event	Doing, happening e.g. (Kick, run, paint, repair, send, burn.)	Actor, Goal
Behavioral	Behaving	Behaver
Mental: Perception, affection, cognition.	Sensing, seeing, feeling, thinking,-e.g. hear, see, know.	Sensor, phenomenon
Verbal	Saying,-e.g. say, tell, warn, argue, ask.	Sayer, target
Relational: Attribution, identification.	Being, attributing, identifying, e.g. have, become, and be	Carrier, attribute, identifier, token, value
Existential	Existing	Existence

There are several studies applied transitivity system to analyze their research in various levels and texts. First, Kuswoyo & Rido (2019) their research investigated on used of transitivity system constructed in pedagogical discourse of engineering lecture introduction in one of university in Netherlands. The finding showed that teachers use variety of transitivity process and material process is the most dominant transitivity process in engineering lecture introduction. They used same framework and methodology to fulfill the research as this researcher. Second, Yasendelika et al (2020) in their research, they analyzed the transitivity process of the Covid-19 hoax discourse in the Menkominfo's hoax report released on May 2, 2020. The findings of research on the Covid-19 hoax data that target multiple parties include the usage of negative-connoting verbal and nominal groups.

Third, Putri et al (2021) in their research they used transitivity system to analyze the covid-19 in media posts namely Jakarta Post and Channel News Asia. Their research used the same theoretical framework and methodology of research as this present writer. This study found that both of headline news used various types of transitivity processes. Material

process means how authorities solved problem covid-19, and etc. Fourth, Wang's research (2021) aimed to explore the ideology implicit in the discourse, thereby exposing the injustice, discrimination and prejudice in the discourse. He used Fairclough's Three-dimensional theory and Halliday's Systemic Functional Grammar as analysis tools. It has been discovered that both People's Daily and The New York Times employ a lot of negative and insulting phrases; the difference in the focus of the two countries' media coverage reflects the ideological divide generated by cultural differences.

Five, Satir (2021) his research tried to investigate the language structures in a social and cultural context. Furthermore, it's aimed to investigate that Queen Elizabeth II's speech to the nation on Coronavirus which is a call for unity. The three meta-functions of ideational function, interpersonal function, and textual function are utilized to examine Queen's speech and improve readers' awareness in terms of interpreting the underlying themes in the speech. From thus, the present writer would like to try analyzing transitivity processes in different objects, this study focus on analyzing five news texts from *Jakarta Post*. These several previous studies will support this study in Halliday (1994) and Halliday & Matthiessen theory (2014) and it can be references of how the result of analysis the text debate and others various contexts.

Theory and Method

The objective of this study is to investigate the types of transitivity processes used by online news namely *Jakarta Post* in Indonesia. This study used Systemic Functional Linguistics theory by Halliday (1994) and Halliday & Matthiessen (2014). Language as a system and it try to explain the arrangement of language in terms of its usefulness, its SFL. Halliday & Matthiessen (2014) offered that a language has three different meta-functions meaning, namely ideational meaning, textual meaning, and interpersonal meaning. They added that the development of an experienced model is the focus of ideational meaning. Ideational meaning refers to a person, an event, a phenomenon, an action, a situation, etc. Thus meta-functions could be used to examine the text and see how it is produced. Transitivity analysis is most widely applied in literary works and news articles, although it is not widely used in spoken texts. Transitivity reveals the realization of ideational meaning at the phrase or clause level (Participants, processes, and circumstances). Halliday & Matthiessen (2014) employed that transitivity is a set of a grammatical systems that constructs the world of experience into set of processes. Halliday identifies the processes in transitivity into six different types: they are material process, mental process, relational process, behavioral process, verbal process, and the existential process.

In this study, the writers will use qualitative and library study since the writers will deal with case of study SFL and the data will be in the form of words, phrases and clauses. Creswell (2014) proposed that qualitative method concerns with social human problems and phenomenon in a natural setting. In addition, qualitative research is one of the approaches that focus on describing something which occurs and it enables the present writers to develop it in detail. Using a library study is to support this current study methodology. Library study provides the source of data that focuses on particular subject and those data can be accessed easily by the present writers offered by Merriam (2009).

The data in this study were five texts of headlines news deals with the news of Covid-19 in Indonesia on March 2nd, April 27th, May 26th, June 30th, and December 30th, 2020. The writers pick randomly five texts news in *Jakarta post*. The writers grouped the five *Jakarta Post* news articles into clauses. There were fives news used from the *Jakarta Post* labeled into JP. Every clause in five texts is examined in this analysis. JP/Mat01/ I tagged every clause. As an example, clause JP/Mat01/I. JP means article in *Jakarta Post*, Mat means stand for material process, 01 means first clause, and I stand for symbol of material process. The

analysis steps include analyzing clauses for transitivity, calculating a percentage for participants, process, and context, presenting the findings, discussing the findings, and making a conclusion.

Findings and Discussion

The writers served fives online news in the *Jakarta Post* as sources of the research. The writers took the data randomly about covid-19 in the *Jakarta Post* press and then served each clause that indicate transitivity processes in the table. The writers checked the data from online news that belong to transitivity processes and classified them into types of transitivity based on their processes. They are material process, mental process, relational process, verbal process, behavioral process and existential process. The data reveal that the most dominant process used in reporting online news in the *Jakarta Post* is material processes. These hits amount to 70,21%. On the other hand, in the second rank, the number of mental processes is 16 constituting 17,02% of the total. The verbal process lagged behind the mental processes. These hits amount to 7,45%. The relational processes hit amount to 2,12%, occurred as same as behavioral processes then, the existential processes hit amount to 1,06%. Table 1 presents the detail descriptions of the transitivity process types in the clauses of fives news in the *Jakarta Post* related Covid-19 to reveal the experiential meanings.

Table 2. Process types distribution by *Jakarta Post* press

No	Transitivity Process	Σ	Percentages
1	Material	66	70,21%
2	Mental	16	17,02%
3	Verbal	7	7,45%
4	Relational	2	2,12%
5	Behavioral	2	2,12%
6	Existential	1	1,06%
Total		94	100%

1. Material Process

Halliday and Matthiessen (2014) proposed that the material process is a doing or happening process. The fact that anything or someone does something to another entity is represented by action clauses. Someone can validate a material process by asking, "What did the actor do?" or "What happened?" There are two players in the material clause: an actor and a goal. First and foremost, the actor is the person or thing who performs a task. The actor is the one who performs the act or activity. Second, the target is defined as the entity to which the process is extended, and the range is specified as the scope or domain of the process. The person or entity that is influenced by the process is the aim. The goal is something that can be accomplished. The example data can show in the data 1:

(1) JP/Mat09/I

They tested positive for the coronavirus.

They	Tested	Positive for the coronavirus
Actor	Material process	Goal

Data (1) contained a material process of doing something. In this data, there are three participants. The first participant is a word "They" takes role is an actor which acts the material process "tested". The word "tested" here expresses the happening material process because there is "Positive for the coronavirus" function as a goal, is the third participant.

Through this clause, the writers show that the actor they taken a test for coronavirus and the result the actors are positive for coronavirus. Then, the second material process as followed.

Data (2) from *They wore masks*

(2) JP/Mat53/I

They wore masks

They	Wore	Masks
Actor	Material Process	Goal

Data (2) showed that is material process. There are three elements which are participant, process, and goal. The participant is only the active actor. The word “They” takes role is an actor which acts the material process “wore”. The word “wore” here expresses the happening material process because there is “masks” function as a goal. Through this clause, the writers showed that the actor took an action after knowing that this moment all people should wore masks when and where they will go, is it to avoiding Covid-19. The next material process presented below.

Data (3) from *11 doctors in East Java have died of the virus*

(3) JP/Mat73/I

11 doctors in East Java have died of the virus

11 doctors	In East Java	Have died	Of the virus
Actor	Circ: place	Material Process	Goal

Data (3) is also established as a material process. The word “11 doctors” takes role is an actor which acts the material process “Have died”. The word “Have died” here expresses the happening material process because there is “of the virus” functions as a goal. And the word “in East Java” is the circumstance of place, it provides further information about from where the actor is. Through this clause, the writers showed that the actor from East Java have died because of terrible virus (Covid-19).

2. Mental Process

Halliday (1994) proposed that the three important sub-types are: 1. Perception (seeing, hearing, etc), 2. Affections and 3. Cognitions (thinking, knowing, understanding, etc.) That's a mental process. There are two participants in the mental process: Sender and Phenomenon. First, a sender is a conscious person who is experiencing, thinking about, or seeing something. Thought refers to cognitive sense, seen refers to perceptual sense, and love refers to emotions sense. The sensors detect the presence of a conscious being engaged in a mental process. The second phenomenon is that the set of entities that can play this role is not limited to any semantic or grammatical category. It triggered a mental process that revealed a far bigger pool of potential participants. The data of mental process are presented below.

(4) JP/Men69/II
He stressed

He	Stressed
Senser	Mental process

In data (4) above, the mental process of word “stressed” it shows the feeling of the actor. Inside the *Jakarta Post* press, these mental processes came in second place behind the material process. Cognition is the name given to these mental processes. The participant “he” is the Senser in terms of transitivity interpretation, who feel the mental process of stressed. The writers show that actor “he” is the pronoun from Windhu who feeling stressed because in his province to many people were infected the coronavirus. And he has tried to recruit more people for being a contact tracing teams to avoiding the virus. Then, the next is the mental process offered below.

Data (5) from *Budi told the public to support the health workers*

(5) JP/Men104/II
Budi told the public to support the health workers

Budi	Told	The public	To support the health workers
Senser	Mental process	Phenomenon	Circumstance :purpose

In data (5), the senser above is “Budi”, follow the perception mental process, “told”, and the phenomenon present use word “to public”, and the circumstance of purpose is “To support the health workers”. The writers show that the senser gives information to the public to support the health workers by wearing masks, avoiding crowded place, and don’t forget to wash your hands with soap. Because, Budi is healthier minister. He has warned about another case of Covid-19. The next data of mental process delivered below.

Data (6) from *I thought the mudik ban would be implemented later*

(6) JP/Men42/II
I thought the mudik ban would be implemented later

I	Thought	The mudik ban would be implemented	Later
Senser	Mental process	Phenomenon	Circ: time

Data (6) it is reveal the mental process. “I” is the senser of the data above, where it follows the mental process of perception “Thought”, for the phenomenon is the word “The mudik ban would be implemented”, and the last is the circumstance of time presented by word “Later”. So, the writers showed that the senser think about the ban to mudik should be implemented before Ied Fitri. Its goal is to reduce the increasing the number of people infected with covid-19. The following mental process is shown below.

3. Verbal Process

Saying is a verbal process employed by Halliday and Matthiessen (2014). Participants in this process include the speaker/sayer (participant who is the speaker), and the receiver (the one who addressed the information, the beneficiary of a verbal message, occurring with or without a proposition depending on position in the clause). Verbiage (the verbalization itself) is another term for verbalization. The word that express the verbal (e.g. assertions, questions, responses, and stories). On the other hand, there is a type of verbal process in which the Speaker uses verbs such as praise, insult, slander, abuse, and flattery to verbally act

on another direct participant. The other participant is referred to as the Target. The sayer/speaker is often a human, but other forms of sayers can also deliver messages. The data below is illustrated of verbal process:

(7) JP/Verb07/III

Jokowi told reporters at the State Palace on Monday.

Jokowi	Told	Reporters	At State Palace	On Monday
Sayer	Verbal process	Target	Circum: place	Circum: time

Data (7) shows that the verbal process in the *Jakarta Post* is rarely appear. This verbal process is the third rank, behind mental process it shown in table 2. The sayer is “Jokowi”, where it follows the verbal process “Told”, the target of the verbal process is “Reporters”, and there are two circumstances: circumstance of place and circumstance of time. The word “at State Palace” is the circumstance of place, it is reveal where the place of event. And word “on Monday”, it presented the circumstance of time. From the clause, the writers show that Jokowi told to reporters at State Palace on Monday, is regarding the mudik ban of Ied Fitri event. The following verbal process is depicted below:

Data (8) from *1,181 motorists were asked to turn around*

(8) JP/Verb21/III

1,181 motorists were asked to turn around

1,181 Motorists	Were asked	To turn around
Sayer	Verbal process	Verbiage

As evidenced by data (8) that the verbal process is apply in the *Jakarta Post* press. The word “1.181 Motorists” present as the sayer (participant), and the verbal process is the word “were asked”, and the verbiage is “to turn around”. The writers show that there are 1,181 motorists (people who use motorcycle) that will mudik, but then they were asked the police to turn around from where they go. The purposed this regulation is to limit the increasing the number of people infected with covid-19. Especially people from the big city. Then, the next verbal process is shows below.

Data (9) from *Rahmat said on Tuesday as reported by Kompas.com*

(9) JP/Verb51/III

Rahmat said on Tuesday as reported by Kompas.com

Rahmat	Said	On Tuesday	As reported by Kompas.com
Sayer	Verbal process	Circ: time	Verbiage

Data (9) in the above is show that the sayer is “Rahmat”, and the verbal process is “said”, then “on Tuesday” is the circumstance of time that present the time of the event, and the verbiage is “s reported by Kompas.com”. The writers shown that Rahmat already give some information regarding the patient as known as K tested positive Covid-19 after attending the mass Ied Fitri prayer at Muhajirin mosque that has reported in Kompas.com on Tuesday.

4. Relational Process

A relational process is one in which a participant's identity and description are linked. Relational processes can be divided into two categories. They are relational attributive and identifying processes. The process of being is the attribution relational process. There are two types of players in the attributive relational process: carriers and attributes. Identifying

relational process, on the other hand, is the act of assigning a value to something. Tokens and values are both involved in this process. The data is illustrated bellow:

(10) JP/Rel26/IV

Jakarta is considered the epicenter of the Covid-19

Jakarta	Is	Considered the epicenter of the Covid-19
Token	Relational process	Value

Table 2 shows that the use of relational processes, including number and percentage in *Jakarta Post* press. It shows that, relational process shared as same behavioral process Only 2,12% both relational process and behavioral process were used in *Jakarta Post* press. Data (10) show that the token is “Jakarta”, “is” is the relational process, and “considered the epicenter of covid-19” is the value of the relational process. The writers found that Jakarta is the epicenter of Covid-19, so people who live there should be aware and very careful with their health and safety. To avoiding the increasing of covid-19 case, people should always wear mask. The next relational process revealed below:

Data (11) from: *The couple was offered a refund or reschedule by the airlines*

(11) JP/Rel70/IV

The couple were offered a refund or reschedule by the airlines

The couple	Were offered	A refund or reschedule by the airlines
Carrier	Relational process	Attribute

Data (11) shown that there is relational process. The carrier is words “the couple”, its follow the relational process “were offered”, and the attribute is “a refund or rescheduled by the airlines”. It shows that the couple whom will go to a business trip, but they get offered by the airlines, will refund the money or reschedule the trip cause of coronavirus they cannot go anywhere.

5. Behavioral Process

The process of psychological or psychological activity is described as the behavioral process. This category of processes is something between mental and physical processes, and they usually only have one participant. The Behaver, the main participant, is usually a cognizant being. There is sometimes a Behaviour Range, such as a Participant, that extends the procedure. The data show in the bellow:

(12) JP/Beh93/V

We can't wait months

We	Cannot wait	Months
Behaver	Behavioral process	Behavior

Data (12) shows the behavioral process. The behavior is “we”, use the behavioral process “cannot wait” and the behavior is “months”. The writers show that the behavior we or society cannot wait the health crisis and economic crisis, in number of months or years. The implementation of PSBB (large-scale social restrictions) is ineffective to reducing the transmission. Next the behavioral process illustrated below.

Data (13) from *I can't go home*

(13) JP/Beh40/V

I can't go home

I	Can't go	Home
Behaver	Behavioral process	Behavior

Data (13) shows that behavior is word "I", use the behavioral process "cannot go" and the behavior is "home". The writers show that the behaver cannot go his home cause of coronavirus. Basically, he and his wife have business trip in East Java and then he want to go home in Batam, but they can't go their home in Batam. Because of the implementation PSBB in Java.

6. Existential Process

The act of existence is referred to as the existential process. It suggested that something had happened or seemed to happen. Existential processes are described by existing verbs like "be," "exist," and "arise," and the existent can be anything. It also reflects experience by saying, "There was/is something." It also conveys feelings. According to Halliday and Matthiessen (2014) argued the existing is any form of phenomenon that a nominal group in the sentence experiences during this process. The sample data of existential process is illustrated below: Data (14) from: *There's no room at all for carelessness*

(14) JP/Exis71/VI

There's no room at all for carelessness

There	's	No room at all for carelessness
	Existential process	Existent

The verb "be" was used in the existential process, as seen in data (14) above. Existential process is the last rank for the occurrence in the *Jakarta Post* press employed this technique. The *Jakarta Post's* usage of the existential process reveals a sub-phase looking ahead of the room isolation. It concerns the future update of data on people who have infected with the coronavirus. The existent "No room for carelessness at all" exists in terms of transitivity interpretation. From the clause above, its revealed that no many rooms for the carelessness

Conclusion

This study investigates 5 news from *Jakarta Post* press by applied the transitivity system with SFL. The qualitative and library study proves that the transitivity theory in Systemic Functional Linguistics is an effective method in *Jakarta Post* press. The following are some of the study's significant findings. The study concludes that material process and mental process are the frequently processes, in the discourse the social actors. Meanwhile, verbal process, relational process, behavioral process, and existential process are seldom used in this study.

All six process types were found to have occurred in the address with quite different frequency. Material processes take up the largest proportion with 70,21% of all the clauses. Mental process come a distant second with 17,02%, the third rank is verbal process with 7,45%, relational process and behavioral process have same number of percentage is 2,12%, and for the last rank is existential process with 1,06%. The writers conclude that the Material process is the most prominent process in the *Jakarta Post* press based on the percentages given. It implies that the *Jakarta Post's* news article has advanced to the level of material process. However, actor, goal, sensor, and phenomenon were the most prominent participants

identified in five news in the *Jakarta Post*. In addition, circumstance of time became the most prominent circumstance in five news reports published by the *Jakarta Post*.

The next researcher that conducts a similar study should look into various texts utilizing Systemic Functional Linguistics, especially transitivity, according to the findings of this study. It is believed that the next researcher would be able to extend the data and conclusions, as well as develop the theory of SFL, particularly experiential meaning, by using other methods and different types of texts. Furthermore, it is hoped that this research will benefit for *Jakarta Post* reporters who cover breaking news.

Examining Parents' Supports toward Children's English Language Achievement

Vatika Sari Tentero¹, Ferra Dian Andanty²
vatikasaritentero07@gmail.com¹; ferradian@unipasby.ac.id²

Universitas PGRI Adi Buana Surabaya^{1,2}

Abstract

The role of parents is notably required to provide supports for their children learning including the supports for their children learning English and its achievement. This study, therefore, aims to explore parents' supports provided for their children in learning English language and its achievement. The problem of this study is focused on how parents provide supports for their children's English learning achievement. In analyzing the data, the researcher used a qualitative case study which emphasizing on describing the types, roles, and supports of parents in an effort to improve their children learning and their English achievement. To collect data, the researcher conducted interviews with 5 (five) pairs consisting of students of junior high school and their parents to get the information and understand from the list of English scores which students had been achieved from the school. From this research, the researcher found out two key findings; 1) Parents often help their children to solve the problems when they learn English either spoken or written form such as meaning of words, grammar, and English pronunciation. 2) Parents' supports are also extended to emotional, educational and financial supports.

Keywords: EFL learners, parents' supports, English learning and its achievement

Introduction

Parents' role can be as one of the factors which influences the success of students in learning English language since English language is broadly communicated in daily use in many countries and learned as second or foreign language at schools with its four basic language skills, such as listening, speaking, reading, and writing.

The phenomenon exists when some students can easily understand the English while others are difficult to get them. It happened not only because of internal factors but also external factors. According to Chairunnisa, et al (2017), learning English requires students to consider not only the external factors but also internal factors. One of the external factors which is merely found is social background factor. Aypay (2002) also found out that social background refers to the history of someone in the terms of how they are raised, their ethnicity, their family's background and it also includes their personal experiences, behaviours, and interaction with their relatives. Thus, family role such as parents' support is one of crucial factors which can affect children's achievement at school.

Based on Kalayci and Oz (2018), parental involvement is a significant factor influencing educational development because children's developmental process is influenced by social environment such as family. Parents' support for children in their education is one of important which is apprehended to help them to get success in their education because the first education which children can get from their parents' behaviour when educating at home. El Nokali et al (2010) also found that parent involvement characteristically involved behaviours of parents at home when they educate to support their children's educational progress which relates to school setting. Thus, parental advocacy is needed to motivate and support the children in achieving a high score, so they can get a good achievement.

Wati (2015) assumed that parent involvement is essential to guide the children how their English language learning process at home in order to get better achievement at school. Parents provide cultural (e.g. work of art and classic literature) and educational sources (e.g. DVDs, books, and other materials) to stimulate them cognitively before the beginning of school (Caro, 2015 as cited in Caro, 2018). For instance, parents who give their children something related to English language such as short videos, poster, and playing children songs in English can make the children slowly interest or get familiar with English language. Thus, it can motivate them to get better in their English achievement at school.

However, looking at the most of the previous studies about parents' involvement are conducted which focused on parents' background and socio-economic which talked about the influence of students' background with their academic achievement in general, and only few studies focus on senior high school students' English high achievement and their parents' support. Therefore, the researcher will investigate parents' support for students toward their English achievement whether students who gain good support are better than who are not or vice versa in junior high school. Thus, the goal of the research is to explore the kinds of parents' supports given to their children in order to get high English Language achievement whether there is relevance or not with their high English achievement based on parents' and students' perspective during learning process at junior high school level.

Theory and Method

Qualitative case study was used for this study. The researcher collected; investigated, classified the data through systematic steps then it was represented in conclusion. Cresswell (2014) explained that case study is an inquiry design found in many fields in which the researcher develops deeply analysis of a case, program, event, activity, process, or individuals, and it detailed that descriptive case study is to describe an intervention or phenomenon and the real life which it happened. Thus, the researcher undertook descriptive case study as the research approach because it is suitable with the characteristic of case study itself since the researcher focused on investigating parental supports in students English Language achievement which happens in society.

The subject of the research were 5 (five) pairs which consisted of students and parents in junior high school level then the data which used were the interview transcript about the participants' story, opinion, and experiences through parents' supports for children education in achieving high English language achievement. Furthermore, documented material such as students' scores of English language lesson who has averaged to high scores achievement at school.

In collecting the data, the researcher used two techniques to accumulate the data implemented to develop the result in order to investigate parental supports toward EFL students English Language Achievement.

The researcher found out documented material from the list of students' scores from the English teacher at junior high school then conducted interview. The researcher used students who got the high scores from school then conducted interview one by one with 5 (five) students and 5 (five) parents using online video live application, thus it was not necessary to do it directly face to face.

In analyzing the data, the researcher used descriptive qualitative for the study which was done in several steps. Miles, Huberman, and Saldana (2014) stated that there are 3 steps which will be detailed below.

1. Data reduction

Data selection reduction is the process of selecting, focusing, simplify, abstract, and change data in writing field notes or transcripts. Thus, the researcher did the steps of data reduction to analyze the data which have been collected through interview from 10 participants by listening the utterances carefully and checked the data by reading the transcription to analyze the data.

2. Data display

Data display provides an organized and compressed assembly of information which permitted for conclusion drawing. So, the researcher displayed the data which have been reduced in order to facilitate the data interpretation.

3. Conclusion drawing

After completing the data reduction and data display, and the last is conclusion. A conclusion may not appear until the completion of data is completed from coding field notes from the storage. Furthermore, the researcher did the themes of the coding at the beginning, so it made easier to conclude the data findings.

The data got in the research had to be valid. Thus, the researcher validated the collected data by using data triangulation, but it was centralized on the triangulation participants. According to Quirkos (2016), triangulation participant is one of triangulation method which used to examine the collected data from different research's participants in using the same method.

The researcher conducted an interview to the 5 (five) pairs of participants (student and parent), to get information which were uttered in order to get concrete of the data. Moreover, the researcher re-implemented that technique to the third, fourth, fifth, and so on to get the data about parental involvements which have got by the students.

Findings and Discussion

The data for this study were collected through interviews and documented material. Based on the result of interviews with 5 (five) pairs of participants which consisted of a parent and a student in junior high school level to be subject of the study, the researcher presented the findings of the study which were divided into 2 findings which will be detailed below.

1. The Problems of EFL Students in Learning English

In this research finding, the researcher presented the problems faced by EFL students in learning English which are found in the field by doing the interviews. Each student has different difficulties in learning English which are related to the skills in spoken and written form. The table below indicated their problem in process of learning.

No.	Student	Problems in Learning English
1	AA	Meaning of English sentences and pronunciation
2	DP	Grammar
3	DA	Grammar
4	MF	Meaning of English word and Grammar
5	ND	Pronunciation

Some students argued that they have some difficulties in learning English especially in understanding grammar. According to the interview, 3 out of 5 students revealed that they have problems in learning the English grammar like structures on the sentences. Because in

learning the structures, the learners have to know the formulas then recognize it first, so it needs more process to be understood. Furthermore, 2 students argued that they had difficulty in learning the meaning of a word.

Other students also have problem to understand English word or sentence by defining it. Sometimes, an English word has several meanings moreover when it puts on a sentence, so it requires knowing the context itself. It needs to search the meaning of a word and get familiar with sentence structure in English to get the correct meaning and interpretation. Furthermore, the student also had difficulties in pronouncing vocabulary in English correctly.

2. Parents' Supports for Improving their Children's English Skills

The data finding presented that there are 3 parental involvements which the researcher found from the interview. The kinds of parents' support which given to the children are emotional supports, educational, and financial supports.

a. Emotional Supports

Emotional support from the interview taken by the researcher means that the way of parents taking care of their children and giving attentions to solve the problem when the children learn English to improve their achievement. It showed that some students get emotional supports from their parents when they are learning English particularly. These are the way parents asking to children about their English improvement not only by accompanying, but also by giving motivation during learning process at home.

b. Educational Supports

Educational supports from the interview gained by the researcher means that the way of parents educate their children by teaching them when the children learn English to improve their achievement, and it showed that some students are being taught by their parents while they are learning English at home. Parents who can speak or understand English are able to teach their children by their own in order to improve their children ability in English.

c. Financial Supports

Financial supports from the interview done by the researcher means that the way of parents facilitate their children by completing their necessary when the children learn English to improve their achievement. It showed that all of participants of the research get it from their parents in order to improve their English achievement at school. Both from the students and parents, they explained that the supports of it included facilities such as English book, internet access, taking English Course, and so on.

The researcher also found about the students' English Language Achievement at school in documented material and interview. The list of student scores below showed the good achievement of 5 (five) students which were participated in the study.

URUT	NAMA SISWA	LP	TUGAS				PERAIAAN				K1	K2	K3	K4
			1	2	3	4	1	2	3	4				
1	...	P	93	100	95	100	✓	✓	✓	✓	92	92	100	
2	...	L	93	100	95	100	✓	✓	✓	✓	92	92	100	
3	...	P	100	100	100	100	✓	✓	✓	✓	100	100	100	
4	...	L	94	100	95	100	✓	✓	✓	✓	96	96	100	
5	...	P	93	100	95	100	✓	✓	✓	✓	92	92	100	

Based on the result above, there are several problems faced by students in junior high school level when they learn English such as pronunciation, meaning, and English Grammar.

Some students get difficulties in pronouncing English words correctly because it needs process, not gained instantly. This finding also found by Nushi, M., & Orouji, F. (2020) which indicated that Iranian EFL students struggle in the learning comprehension when studying about English, particularly pronunciation aspect. The writing skill also often becomes students' difficulties because the students have to understand the meaning of vocabulary and English structures.

To solve those problems, the kinds of parents' support which gained by the students is effective way to solve the problem. Those are emotional support, educational support, and financial support. The supports are necessarily obtained in order to improve students' English achievement.

The emotional supports which gained by students are the way parents in taking care and giving attentions to their children when processing learning English. Accompanying children, asking very often about students' progress, checking the improvement, and giving advices when they are studying English are good emotional supports in order to motivate them studying hard and make them feel appreciated. Those supports can result students' English achievement in the positive way. Moreover, this perspective is also corroborated by Al-Mahrooqi et al (2016) which mentioned that Omani parents are aware of the importance of their advocacy in their children when learning English, so that this finding also revealed that the parents always take their time to fully involved toward their children's learning activities.

Beside emotional support, educational support is significant in helping out the children learning English. The educational supports provided by parents, who can understand English language really influence their children in achieving good English achievement. It is the way parents teach and educate their children in learning English. Before they educate their children, they educate themselves first in order to give best involvement to their children. Moreover, Forey et al (2016) explained that Hong Kong Parents involve themselves to educate their children about English by developing their literacy skill. Based on the findings, parents especially the father who can understand English really creative in making effective media and showing affections to increase their children's English skills. For evidence, Poyraz (2017) mentioned that fathers are more enthusiastic than mother in rearing their children, particularly in learning English thus the education level of the parents also significantly influence their involvement to their children in learning English.

Although, educational and emotional supports are crucial, yet financial support tends to determine all the facilities that support the EFL students in learning English. Based on the study, financial supports such as several facilities from parents are very need to complete students' necessity with some facilities such as books and some electronic tools in the interest to intensify their English skills even though the parents cannot communicate by using English. It supports by previous research, Torres and Pena (2016) pointed that even though the parents do not have the ability in English language, they have the potential to help with EFL learning from non-linguistics point of view like monitoring and providing learning media. Not only facilities which need more cost to spend, the parents also provide some handmade effectives media according to data finding. Moreover, Wati (2016) showed that lower education income parents more enthusiasm in supporting their children helping them doing assignments, memorizing the vocabulary, and providing some English learning media to increase students' English skills.

It indicated that parents support necessarily for EFL students' English language Achievement. From the students' score lists which attained from school, it showed that most of students get high English Achievement because of parental involvement. The way parents give several kinds of supports related to English skills can motivate the students to do the best they can. By recognizing the support, the student language achievements are various because it probably depends on the support itself. For instance, Hosseinpour et al (2015) indicated that

parent support has a potential in improving the children's achievement, particularly language achievement. Moreover, Aman J, et al (2019) explained that the main cause of low academic achievement in English is the lack of awareness and involvement of parents in their children learning activities.

Conclusion

The current study is designed to explore about the parents' supports and involvement toward EFL students' English Language Achievement. Documented material and interviews with 10 (ten) participants which are consisted of 5 students and 5 parents used to exhibit of the way of parents in supporting their children in order to get best English achievements. Based on the study, it has shown that there are several conclusions which can be discovered from this study as follows, 1) the problems of EFL students in Learning English in spoken and written form such as English words' meaning, grammar, and pronunciation. Thus, it can be solved with the parents supports given to their children. Meanwhile, 2) Parents' supports for improving their children's English Skills which are about emotional, educational, and financial support which significantly involved. Furthermore, the researcher also finds students' English language achievement at school. From the grade list from school is showed that the students get high achievement because of the parental involvement.

Based on the result of the study, there are 2 suggestions are proposed which expectedly will be advantageous for parents and other researchers. Firstly, the parents need to improve their knowledge about English since English is getting important and being daily used nowadays. Therefore, they are able to support their children in learning English in order to get high achievement at school. Secondly, this current exploration was limited by time. Due to the limited time, there are several findings, which are not detailed in the research. Hopefully, this study can enrich to the topic of parent involvement. Therefore, the study is expected to involve more the other researchers with the same topic but different subject of the study.

Woman Representations In The Word “Bunga”

Based on Patriarchal Point of View

(A Componential and Associative Meaning Analysis in Dangdut Song Lyrics)

Yuli Rahmawati Dewi¹
yuli1997@upi.edu¹

Universitas Pendidikan Indonesia¹

Abstract

Dangdut is one of the highly demand music genre among Indonesian. It's one of the reason why some dangdut competitions held annually in Indonesia. Dangdut is not only aired in the television. Another medias such as radio and Youtube are also airing it. Unfortunately in some dangdut song lyrics, the writer suspected that there are Patriarchal messages that might be able to influence the hearer thought. Especially in lyrics that have or mention flower on it to describe women. In this research, the writer wants to find out the componential meaning analysis of the word “bunga” (Flower), what are the associative meanings of the word “bunga” related to the women and how it represents women in Patriarchy points of view. The grand theories used are componential and associative meaning analysis. The method used is descriptive qualitative with scrutinize and write technique. The data limited to 10 dangdut songs that's offending or telling about flower and related to the women. From this research, the writer found that denotatively, the meaning of flower based on (“Arti Kata Model- Kamus Besar Bahasa Indonesia,” 2012) is part of the plant that's going to be the fruit, it's usually beautiful and smells good. Yet, when it associated to the women, we can conclude that women represented as passive creature which the beauty can be enjoyed as men pleasure. But when its beauty explored by the men, women will be meaningless. Another potential things except beauty of women are never be considered in Patriarchy system.

Keywords: Associative, Componential, Dangdut, Flower, Lyric, Meanings, Patriarchy.

Introduction

Language is one of the uniqueness that differentiates humans with other creatures. Humans use language to communicate, describe their personality, point of view, way of thinking and even culture. In communication processs, humans share the sense that understood by their society. (Dale & Kello, 2018) stated that the “sense” that humans made is a self organizational property of the cognitive systems behavior. It resonated in a manner that weaves fluctuations from sounds to topical context. (Sharifian, 2019) stated that Language structure and conceptualism that made by humans are often reflect their cultural cognition. That's why the study of language becomes the key to understand cultural cognitions.

Not only as the tool of communication, human also creates arts using language. Literature is one of the art work made by human. Literature records the culture of its maker. As (Nugraha, 2020) said, literature is a picture of the society condition. It considered as a social documentary that represents the condition of a society in a certain time. In this research, the writer is going to analyse one of the art works that is famous among Indonesian.

It is dangdut song lyrics. Dangdut genre is quite famous in Indonesia. Some television programs even held annual dangdut contest to find the regeneration of dangdut musician.

Being one of the most demanded genre among Indonesian people, dangdut can be considered as an art work that represents Indonesian culture, even though dangdut is not pure from Indonesia. Some musician made so many dangdut songs that aired and consumed by the society even until these days. From this case, we knew that the society has no problem with the lyrics and enjoy it as well. These lyrics might also show what happen in the society daily life.

Unfortunately, the writer found that some of dangdut songs are not gender friendly. Some of dangdut songs explore the woman representations in Patriarchy points of view. There are some dictions that usually describing women, somehow in the bad way. The lyrics show man's planning of gender role Patriarchy has decided to be obey by the women. It also describes how women considered as a beautiful yet meaningless creature. For example the choice of the word "*bunga*" (flower). The writer identifies that there is a Patriarchal message behind the meaning of the word *bunga*.

Theory and Method

There are some meanings that can be constructed by a certain chosen word. It depends on the speaker and the rule claimed by the speech community. (Saeed, 2016) said that people's thoughts are distinguished by the categories available to them in their language. The writer wants to find out how is the componential meaning analysis of the word *bunga* based on dangdut song lyrics chosen.

(Saifullah, 2018) said that This analysis aimed to describe how a certain word made from various component. There are some ways to do the componential analysis. The first is using hyponym-hypernym (general-specific). It means if the word A categorized as the word B specification. It means A is the hyponym of B and B is the hypernym of A. The second is using the antonym. It collects one or more different characteristic of the meanings components analyzed to emphasize the real meaning of a certain word. The third is using the binary function analysis. This function emphasizes the meaning component that is in line with the meaning by giving the sign [+] and [-] based on the suitability.

(HP & Abdullah, 2013) stated that learning about meaning means to learn how the speech community understands each other and arranges the understandable sentences. (Rahyono, 2012) stated that there are some objects in the language that being juxtaposed, compared, likened, or contested related to the language reativity, human cognitive and language use based on the structured conceptualization proses. Considered that dangdut is a genre that close with the society in Indonesia, the writer is also going find out what is the associative meanings construct by the word *bunga*. (Suwandi, 2017) explained that associative meaning is a meaning that related to the speech community point of view and moral values. For example the lexeme "*Putih*" or white, in Indonesian language associated with pure, purity, good and right meanings.

Last but not lease, the writer is going to conclude the Patriarchy point of view that represents women from that meanings analysis. By this research, the writer wants to change the Paradigm of Patriarchy that still famous in Indonesia because in some way it disadvantages a certain gender. (Hermawan et al., 2017) stated that women considered as a passive object by men. (Sakina & A., 2017) explained that in Patriarchal point of view, men has a role as the main control in the society. While women only have tiny influence in economy, social, polcy, psychology or even in a marriage. The limitation men plan toward women has shackled women and made them discriminated in the society. Men difined almost everything in Patriarchal society. It included how women must act, looked, and move.

Patriarchy shown that women seems like have no right for their own body, mind and soul. The writer realizes that as (Budiman, 2000) stated, language as the media of communication cannot be clean from the gender bias. Yet, we can change our point of view when we use language based on the situational context to be friendly for other humans no matter what gender they have.

This study is a descriptive qualitative research. The data collected by scrutinize and write technique. The data collected will be analyzed with componential and associative meaning analysis theories. Due to the limit of time, the data will only limited to 10 dangdut song lyrics chosen based on the word flower used, offending or telling about women. The songs chosen titled *Bunga Surgawi*, *Gembala Cinta*, *Bunga Dahlia*, *Badai Biru*, *Kumbang-Kumbang*, *Matahariku*, *Nasib Bunga*, *Untuk Bungamu*, *Bunga Hati* and *Pecah Seribu*.

The research is going to be held in three steps. The first is data collecting. The writer is going to scrutinize some dangdut songs that the lyrics are using the word flower and offending or telling about women. These dangdut songs lyrics suspected as the songs that contained Patriarchal point of view inside. Second, the writer is going to write the componential meanings related to the word “*Bunga*” based on the 10 songs chosen according to the grand theory guidance. The writer is also going to analyze the associative meanings related to the word “*Bunga*” based on the songs. From that componential meaning and associative meaning analysis, the writer is going to prove the women representations in the Patriarchy point of view contained in the song lyrics. Last but not least, the result is going to be written and reported completely.

Findings and Discussion

Based on the scrutinize process, these are the quotations of dangdut song lyric that offendings or telling about flower (“*bunga*”).

Data 1 “*Bunga Surgawi*”

*“Engkau bagai bunga datang dari surga
Harum aroma indahmu tiada terkira
Izinkanlah aku untuk menyuntingmu
akan kujaga ku sayang sepenuh jiwa
Ku berjanji setia padamu
Hanya menghisap madumu
Duhai bunga impian jangan ragu dan bimbang aku bukan si kumbang jalang
Ku ingin engkau saja menghias relung jiwa karena hanya kau yang kucinta”*

Data 2 “*Gembala Cinta*”

*“Sekuntum bunga mekar di taman
Disunting musyafir lalu
Bunga layu dan gugur ke bumi.
Bila bunga sedang mekar
Indah mewangi dan segar
Kumbang-kumbang menghampiri
Rasa ingin memiliki
Tapi awas janganlah merasa bangga akan kecantikanmu*

*Bila nanti engkau terluka asmara
Keangkuhanmu pun sirna*

*...Kini bunga layu dan tertunduk malu
Wajahnya sudah tiada berseri lagi
Tertipu cintanya hingga putus asa
Hanya mengharap janji yang tiada pasti
Oh sungguh kasihan bungapun merana
Menyesalpun tiada berguna
Biarkanlah musyafir berlalu”*

Data 3 “Bunga Dahlia”

*“...Duhai bunga pujaan kau bunga Dahlia
Oh bunga kesayangan kau bunga Dahlia
Bunga nan cantik menawan menjadi rebutan
Sungguh indah di taman
di taman kerinduan
Banyak bunga nan molek tak semolek dahlia*

*...datanglah kumbang menghampirinya
Menghisap sari bunga dahlia
Bunga di taman kini layu di tangan
Kumbang tiada belas kasihan
Bungaku malu malu merunduk pucat warnanya
Bungaku malu malu bersedih sesali dirinya
Layulah sudah bunga impian
Layulah sudah bunga dahlia bungaku dahlia”*

Data 4 “Badai Biru”

*“Bagai bunga layu di tangkainya
Hingga jatuh tiada yang sudi memandangnya”*

Data 5 “Kumbang Kumbang”

*“Kumbang kumbang di taman jangan kau merayu
Kumbang kumbang di taman jangan kau menggoda
Aku sekuntum bunga tak mudah kau rayu
Aku sekuntum bunga tak mudah kau petik, tak mudah kau petik*

*...Tak kubiarkan sang kumbang menghisap maduku
Walau sejuta kumbang datang*

*Ku tak mau kan layu tergoda bujuk rayunya
Pergilah jauh janganlah mengharap cintaku
Biarkan aku mekar selalu bersemilah selamanya jangan kau ganggu aku”*

Data 6 “Matahariku”

*“Bunga sekarang merana dan layu
Karena kumbang tak lagi merayu”*

Data 7 “Nasib Bunga”

*“Setelah putik berbunga
Kelopak merekah indah
Engkau mereguk engkau mereguk
Madu perwita
Setelah benih kau tanam
Dan kini bertunas sudah
Engkau biarkan kering merana
Mendamba cinta
Sampai hati kau merenggut bunga di jambangan
Lalu kau campakan dia dalam pelimbahan
Sungguh tak terpikulkan beban aib dan noda
Luka bertindih derita
Duhai nasib bunga”*

Data 8 “Untuk Bungamu”

*“Jika bungamu kembang di dalam taman
Ambilkan air lalu kau siramkan
Jangan biarkan bungamu merana
Merambat tanah menjadi-jadinya
Dipijak orang tanda tak guna
Jika bungaku mewangi restu
Suntinglah segera dengan rasa mestra
Jangan tunggu hingga bungamu layu
Nanti disunting si orang lalu
Kecewa kalbu penuh cemburu
Ho, insan yang tiada merasa
Betapa nikmat harumnya
Tidak menghiraukan bunga
Ho, insan yang pandai menilai
Akan keindahan warna aneka bunga
Sungguh beruntung bunga yang dijaga
Dipupuk dan disiramilah juga*

*Oleh orang yang bijak dan mengerti
Dijaga bunga sepenuh hati
Dari godaan si kumbang Janti”*

Data 9 “Bunga Hati”

*“Bunga baru ku tanam
Pucat terkulai layu
Kumbang tak sabar diam
Sudah datang merayu
Bunga belum ku siram
Tanganku sudah letih
Kuntum belum berputik air tinggal setitik
Ho, bunga pujaanku sabarlah menanti hujan turun lagi
Atau nanti ku nanti embun diwaktu pagi
Oh bunga, oh bunga, oh bunga hati”*

Data 10 “Pecah Seribu”

*“Ibarat bunga aku takut banyak kumbang yang hinggap
Aku tak mau patah patah tangkaiku patah
Aku tak mau”*

1. Componential Meaning Analysis

Hyponym-Hypernym Componential meaning analysis

Tabel 1

<i>Bunga (Hypernym)</i>
<i>Harum/Wangi (Fragrant)</i>
<i>Indah (Beautiful)</i>
<i>Disunting (Used as an ornament)</i>
<i>Madu (Honey)</i>
<i>Menghias (Adorn)</i>
<i>Mekar (Blossom)</i>
<i>Segar (Fresh)</i>
<i>Cantik (Pretty)</i>
<i>Berseri (Beam)</i>
<i>Molek (Lovely)</i>

<i>Kumbang</i> (Beetle)
<i>Sari</i> (Essence)
<i>Warna</i> (Color)
<i>Tangkai</i> (Stalk)
<i>Kuntum</i> (Flower bud)
<i>Bersemi</i> (Sprout)
<i>Putik</i> (Pistil)
<i>Kelopak</i> (Calyx)
<i>Merekah</i> (open up, blooming)
<i>Benih</i> (Seed)
<i>Tanam</i> (Plant)
<i>Tunas</i> (Shoot)
<i>Kembang</i> (Bloom)
<i>Merambat</i> (Crawl)
<i>Tanah</i> (Soil)
<i>Dipupuk</i> (Manured)
<i>Disiram</i> (Cascaded)

All the words below the word “*Bunga*” shown the hyponym that conclude from the lyrics analyzed. *Bunga* is the hypernym and all the words found below it are the hyponym.

Antonym Componential Meaning analysis

Tabel 2

<i>Bunga</i>	
Antonym	It means that flower actually meant to be
<i>Layu</i> (Withered)	<i>Bersemi</i> (Sprout)
<i>Gugur</i> (Fall)	<i>Tumbuh</i> (Grow)
<i>Pucat</i> (Pale)	<i>Berwarna</i> (Colored)
<i>Petik</i> (Pluck)	<i>Tanam</i> (Planted)
<i>Kering</i> (Dry)	<i>Disiram</i> (Cascaded)

Compared to the Hypernym-Hyponym analysis which have positive characteristics related to the flower, in the antonym componential analysis, these words shown negative characteristics of flower which should be avoid.

Binary Function Componential Meanings Analysis

Tabel 3

<i>Bunga</i>
[+] Animate
[-] Human
[-] Strong
[-] Empower
[-] Move

2. Associative Meaning Analysis

Based on the data we got from the componential analysis, we knew that “*Bunga*” related to something that is *Cantik* (Pretty) and *Molek* (lovely). These two words are personification figurative language that usually related to the women. *Bunga* literally expected to smells good, beautiful, blossom, fresh, beam, sprout, bloom, and crawl. These are because flower used as ornament, trimmer, or to be consumed by the beetles. Flower will be less attracted or meaningful when it is withered, fall, pale, or dried. These negative things usually related to what happen after a flower touched by the beetle.

From that fact, we saw that all the things that being emphasized in flower are about its physical appearance. Since flower is usually used to describe women, we can conclude that to be pretty and lovely, women expected to always maintain their physical appearance. Flower also mentioned to be careful of the beetle. Because when the beetle taken something from it, then it’s going to lose the beauty. The beetle described as a careless, heartless, and teaser creature because they can easily do anything to the flower as a passive creature. The beetle can move from one to another flower as one will. Beetle usually used to describe men.

When flower consumed by the beetle, it described as a powerless creature that can do nothing but being withered. Some lyrics even mentioned that the flower will be languish, lament, and disgrace. Those words are also personification figurative language that related to a human. Since it tells about women, we can conclude that if women devote them self toward men, and the men easily walk away as one will, they will be languish, lament, and disgrace. Yet there also a lyric that mention if the flower isn’t being seduced by the beetle, it will also be withered. In these point of views of the lyrics, all the things happen to women are only depend on men, whether it’s being adored or contemptible. There’s no other things inside women that are meaningful except the physical things men considered from them.

This phenomenon shown that there are patriarchy point of view inside these lyrics. In Patriachal culture, men are being the ruler of everything included women body. Women considered as passive creature who don’t have power even for their own body. If women want to be adored, they must follow the men rule. The rule that mentioned are only considered the physical appearance and how women being used. The other abilities, superioties, pride or feeling of women shown as unimportant things.

Conclusion

From this componential and associative meaning analysis, the writer can conclude that the word *Bunga* (flower) in Dangdut song lyrics chosen, used to describe how women should

be and how is the ideal point women have to fill in the society. This ideal point of women defined by Patriarchal point of view. *Bunga* might be a beautiful creature that adored by people, yet when it's associated to the women, it shown how women only considered as a passive creature that's only meaningful for its beauty. It even has no power for its own life. Since this case found in the art works of Indonesian, we can conclude that unfortunately Patriarchy culture is still exist in Indonesia's society. Even, as one of the highly demanded music genre in Indonesia, some dangdut songs are still not gender friendly. Especially for women. From this research, one of the suggestion the writer can give to the next reseacher is to analyse the Indonesia society response to song lyrics they like to hear and how it influences them.

Social Actor Domination in *Tagar. Id's* Minangkabau Language Gospel Application News

Saiyidinal Firdaus¹

Saiyidinalfirdaus1995@gmail.com¹

Universitas Indonesia¹

Abstract

Irwan Prayitno, as the Sumatera Barat Governor, sent a letter to the Minister of Communication and Information through the Director-General of Informatic Application on May 28, 2020. The letter contains a request to remove the Minangkabau language Gospel application from the Google Playstore. The removing discourse of Minangkabau language Gospel application receives attention from *Tagar. Id*. However, *Tagar. Id's* journalist focuses on the figure or actor being reported, namely Irwan Prayitno. This tendency has prompted *Tagar. Id's* journalist to reveal Irwan Prayitno's life profile through the Minangkabau socio-cultural reality. Therefore, this study aims to describe the dominance of social actor contained in the *Tagar. Id's* Minangkabau language Gospel application news. The author uses van Dijk's view (1988) in showing the relationship between social cognition and social actor in mass media's news. The author also uses Fairclough's socio-cultural approach (1998) in offering the relationship of discourse observed and socio-cultural perspective in the report. Thus, the author applies a qualitative approach with van Dijk's socio-cognitive and Fairclough's socio-cultural approach as an analytical knife. The study result indicates the person scheme and event scheme domination in the *Tagar. Id's* Minangkabau language Gospel application news. The two schemes play an essential role in describing Irwan Prayitno's figure as West Sumatera Governor through the Minangkabau socio-cultural reality.

Keywords: Irwan Prayitno, socio-cognitive, socio-cultural, *Tagar. id*

Introduction

Usually, the mass media's news contains events that are considered essential or viral. However, it sometimes includes things related to the actor or figure being reported. This fact can be seen from the *Tagar. Id's* Minangkabau language Gospel application news. In its reporting, *Tagar. Id's* journalist does not focus on the highlighted event but explores Irwan Prayitno as West Sumatera Governor. Through the information built, the author sees the *Tagar. Id's* journalist wants to show Irwan Prayitno's figure domination to the public, which is associated with Minangkabau socio-cultural reality.

In this case, the author sees *Tagar. Id's* journalist tends to explore social actor who is reported on through event contained in the news. In the socio-cognitive approach, Van Dijk (1988: 20) said the individual cognitive process is an essential key to link text and context to an observed event. In this case, *Tagar. Id's* Minangkabau language Gospel application news correlates with the cognitive approach in describing social schemes. Therefore, this study aims to describe the dominance of social actor in the *Tagar. Id's* Minangkabau language Gospel application news.

Research related to van Dijk's socio-cognitive approach is conducted by Amoussou & Allagbe (2018), which explore the application of van Dijk's socio-cognitive process in more detail. In their research, Amoussou & Allagbe see van Dijk's socio-cognitive approach needs to consider various forms of social cognition possessed by social collectivities (groups, organizations and institutions). Van Dijk (1993: 257) said social cognition is a shared social

representation of community arrangements, groups and relationships, and cognitive operations such as interpretation, thinking and debating, inferring and learning.

Van Dijk (1988) claimed that socio-cognitive should not limit itself to studying the relationship between discourse and social structure. The use of language and speech always presupposes mental models of intervention, goals and general social representations of language users. In other words, discourse studies triangulate between society/culture/situation, cognition and discourse/language. This fact is an ideological model of speech - a cognitive-tripartite society supporting van Dijk's socio-cognitive approach.

Theory and Method

In a simple definition, van Dijk's CDA is often called the socio-cognitive approach because van Dijk's CDA involves cognition and the value of social practice. In line with this understanding, van Dijk explains more fully what is emphasized in his socio-cognitive approach (1988: 20).

“Our emphasis on cognitive processing as a key phase in linking text and context through news participants does not imply that such cognitive processes are merely personal or individual. For a more general account of news production, personal cognitions are relevant only to explain personally or ad hoc variations in news processes. Since we do not deal with journalists or media users as unique individuals but as social actors and group members, our cognitive approach focuses on social cognition”.

Based on the explanation above, the author can understand that individual cognitive process is essential to link text and context. The strategy represents a cognitive approach that involves social actors and social cognition. Thus, a review of the social actor becomes the focus of this study.

This study uses a qualitative approach with van Dijk's socio-cognitive approach as an analytical knife. Podesva & Sharma (2013: 236) said qualitative research includes analyzing linguistic data related to conversation, discourse, and interaction. In this case, interpreting the author's data involves social cognition and social actor in the *Tagar. Id's* Minangkabau language Gospel application news. This study also applies Norman Fairclough's socio-cultural views (1998). Fairclough's socio-cultural approach involves social and cultural perspectives as a text analysis process. Fairclough views the text as a relationship of the social context.

In this study, the author uses library research techniques to collect data. A literature study is a research sourced from articles, news, and documents containing research problems (Nazir, 2009: 27). The author uses data related to reporting from the mass media so that literature study is the proper method to be applied in this study.

Data analysis focuses on van Dijk's (1988) socio-cognitive approach by linking the intention and meaning represented through the use of the "Minangkabau socio-cultural" context and the actor "Irwan Prayitno" in the news. Thus, social cognition analysis will analyze the cognitive process of *Tagar. Id's* journalist views Irwan Prayitno's figure as West Sumatera Governor based on the person scheme and event scheme stages. Data analysis will also link Norman Fairclough's socio-cultural approach in reviewing the relationship between social actor dominance and Minangkabau socio-cultural reality.

Findings and Discussion

Van Dijk (1994) viewed the text as social cognition that reveals the hidden meaning in a text. Augoustinus & Walker (1995: 36 - 42) simplified van Dijk's opinion on social cognition schemas based on the analysis of person schema, self-schema, role schema and event schema. In this regard, *Tagar. Id's* Minangkabau language Gospel application news raises social views to Irwan Prayitno as West Sumatera Governor. However, this study only relates the person scheme and the event scheme to *Tagar. Id's* Minangkabau language Gospel application news.

In the social cognition analysis, the author does not link the self-schema and role schema in the study for several reasons. First, the exposure of the self-schema is the same as the exposure of the person schema. The two schemes both emphasize views on the figure or actor being reported, namely Irwan Prayitno. Therefore, the author only uses the person scheme to describe Irwan Prayitno's figure in *Tagar. Id's* Minangkabau language Gospel application news. Second, the role scheme refers to a person's role in people's lives. In this case, the person's part is related to the description of Irwan Prayitno's figure being reported on the news. As is well known, Irwan Prayitno is West Sumatera Governor, so Irwan Prayitno's role is to protect the Minangkabau people and solve problems that exist in West Sumatera. However, in the news used as a data source, the author does not find data that explicitly emphasize Irwan Prayitno's role, so there is no solid evidence for include a role scheme in this study. Therefore, the author only includes the person scheme and the event scheme in this study.

1) Person Scheme

Augoustinus & Walker (1995: 36) said the person scheme refers to the journalists' or media crew's views of someone highlighted in the news. In this case, Irwan Prayitno becomes the figure or actor highlighted in *Tagar. Id's* Minangkabau language Gospel application news.

On this news, *Tagar. Id's* journalist describes Irwan Prayitno as West Sumatera Governor who is brave and firm in rejecting the Minangkabau language Gospel application. This fact can be seen from the news headline, namely "*Irwan Prayitno, Gubernur Penolak Injil Bahasa Minang* (Irwan Prayitno, the rejector of Minangkabau Language Gospel)". In this case, the author sees *Tagar. Id's* journalist wants to elevate Irwan Prayitno's persona through the news headline used. The word "**penolak (rejector)**" can mean "**one who refuses**" (KBBI, 2016). The word "**penolak (rejector)**" is addressed directly to Irwan Prayitno, written at the beginning of the headline. From the use of news headline, the author sees *Tagar. Id's* journalist focuses on Irwan Prayitno's figure as West Sumatera Governor who dares and firmly rejects Minangkabau language Gospel application.

In the news, *Tagar. Id's* journalist discloses Irwan Prayitno's complete, accurate, and detailed profile. This fact can be seen from the news body, as follows.

(P1) "*Irwan Prayitno merupakan Gubernur Sumbar dua periode. Dia telah menduduki kursi gubernur sejak tahun 2010. Selain politisi, pria berusia 56 ini juga dikenal seorang akademisi yang menyanggah gelar profesor bidang psikologi*". (paragraf kelima)

(P1) "Irwan Prayitno is the West Sumatera Governor for two terms. He has been in the governorship since 2010. Apart from politicians, this 56-year-old man is also known as an academic who holds the title of a psychology professor". (fifth paragraph)

(P2) "*Gubernur yang telah mencipta lebih dari 50 ribu pantun ini lahir di Yogyakarta. Dia anak pertama dari tiga bersaudara pasangan keluarga asli Minangkabau. Ayahnya bernama Djamrul Djamal dan ibunya Sudarni Sayuti. Kedua orang tuanya sama-sama*

lulusan PTAIN Yogyakarta (kini UIN Sunan Kalijaga Yogyakarta) dan berprofesi sebagai dosen” . (paragraf keenam)

(P2) “The governor, who has created more than 50 thousand rhymes, was born in Yogyakarta. He is the eldest of three children from a Minangkabau family. His father's name is Djamrul Djamal, and his mother's name is Sudarni Sayuti. Both of his parents graduated from PTAIN Yogyakarta (now UIN Sunan Kalijaga Yogyakarta) and work as lecturers”. (sixth paragraph)

(P3) “Meski begitu, Irwan menamatkan pendidikan menengah di kampung halamannya yakni Kota Padang. Setelah itu, dia melanjutkan kuliah ke Universitas Indonesia dengan mengambil jurusan psikologi”. (paragraf ketujuh)

(P3) “Even so, Irwan completed secondary education in his hometown, Padang. After that, he continued his studies at the Universitas Indonesia, majoring in psychology”. (seventh paragraph)

(P4) “Selepas sarjana, Irwan kembali pulang ke Padang dan mendirikan Yayasan Pendidikan Adzkia sembari bekerja sebagai konsultan pengembangan SDM berbagai perusahaan dan juga dosen psikologi industri”. (paragraf kedelapan)

(P4) “After graduating, Irwan returned to Padang and founded the Adzkia Education Foundation while working as an HR development consultant for various companies and a lecturer in industrial psychology”. (eighth paragraph)

(P5) “Tahun 1998, Irwan bergabung ke Partai Keadilan. Dia membentuk dan mengetuai perwakilan PK di Malaysia sembari melanjutkan S3 di Universitas Putra Malaysia. Dengan PK yang kini menjadi PKS, Irwan terpilih menjadi anggota DPR RI perwakilan Sumbar. Tak tanggung-tanggung, tiga periode lamanya Datuk IP (sapaan akrab Irwan) duduk di Senayan. Mulai dari periode 1999, 2004 dan 2009”. (paragraf kesembilan)

(P5) “In 1998, Irwan joined the Partai Keadilan. He formed and chaired the Partai Keadilan representative in Malaysia while continuing his PhD at Putra Malaysia University. With Partai Keadilan now becoming Partai Keadilan Sejahtera, Irwan was elected as a member of the Indonesian House of Representatives representing West Sumatera. Unmitigated, for three periods, Datuk IP (Irwan's nickname) sat at Senayan. Starting from the period 1999, 2004 and 2009”. (ninth paragraph)

(P6) “Tahun 2005, Irwan Prayitno pertama kali mencalonkan diri maju menjadi calon gubernur Sumbar. Namun, langkahnya terganjal karena ditumbangkan Gamawan Fauzi (mantan Menteri Dalam Negeri era SBY). Lantas, dia mencoba keberuntungan lagi di Pilkada 2010 dan akhirnya berhasil untuk menang periode pertama”. (paragraf kesepuluh)

(P6) “In 2005, Irwan Prayitno first ran for governor of West Sumatera. However, his steps were hampered because he was overthrown by Gamawan Fauzi (a former Minister of Home Affairs in the SBY era). Then, he tried his luck again in the 2010 election and finally managed to win the first period”. (tenth paragraph)

(P7) “Di Pilkada 2015, Irwan berpasangan dengan Nasrul Abit. Sedangkan rivalnya adalah Muslim Kasim (almarhum) yang tak lain Wakil Gubernur Sumbar yang mendampingi di periode 2010-2015. Irwan lagi-lagi menang dan menjabat gubernur hingga saat ini”. (paragraf kesebelas)

(P7) “In the 2015 election, Irwan was paired with Nasrul Abit. Meanwhile, his rival is Muslim Kasim (deceased), none other than the Deputy Governor of West Sumatera, who

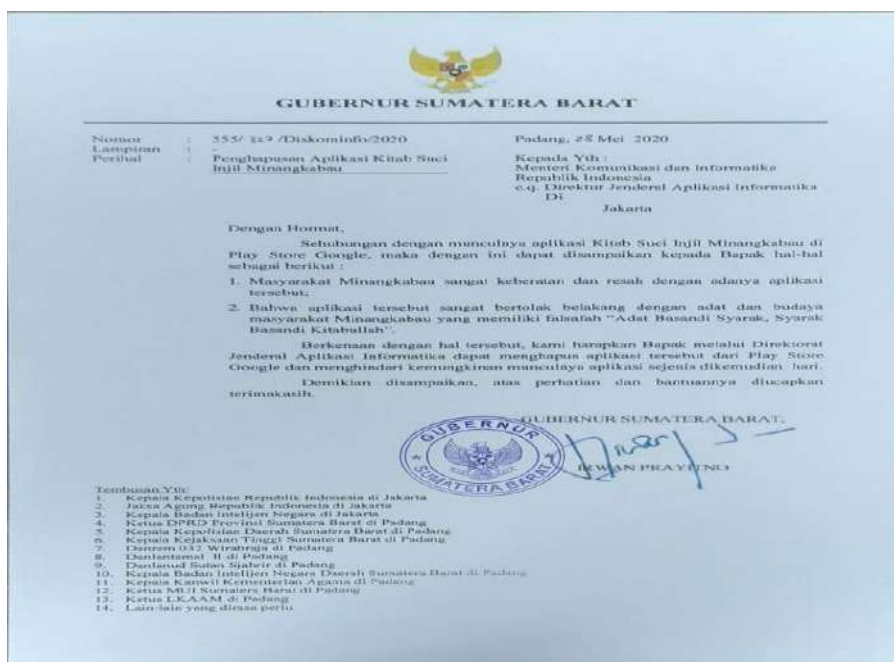

accompanied him in the 2010 - 2015 period. Irwan again wins and serves as governor until now". (eleventh paragraph)

Based on the seven paragraphs quoted, the writer sees the tendency of the *Tagar. Id's* journalist showing the Irwan Prayitno's profile or biography is a form of social actor domination in the news, not the problem regarding Irwan Prayitno's rejection of the Minangkabau language Gospel application. The letter submitted by Irwan Prayitno to the Minister of Communication and Information has been widely distributed. In this case, *Tagar. Id's* journalist does not focus on the letter comprehensively but focuses on the Irwan praying's figure as West Sumatera Governor who boldly and firmly rejects the Minangkabau language Gospel application. Therefore, the cognitive process of *Tagar. Id's* journalist shows social actor domination in the discourse strategy built.

For this reason, the author shows Irwan Prayitno's picture as a Governor who rejects the Minangkabau language Gospel application and his letter to the Minister of Communication and Information through the Director-General of Informatic Applications. The purpose of the attached Irwan Prayitno's picture and his letter is for the public and readers to know comprehensively, clearly, and in detail that *Tagar. Id's* journalist plays a discourse strategy in social actor domination. Irwan Prayitno's pictures and his letter can be seen in the attachment, as follows.

Picture 1: Irwan Prayitno, Sumatera Barat Governor

Picture 2: Irwan Prayitno's letter to the Minister of Communication and Information

2) Event Scheme

Tagar. Id's journalist forms an event scheme through the appearance of Irwan Prayitno's letter to the Minister of Communication and Information on May 28, 2020. The letter contains Irwan Prayitno's rejection of the Minangkabau language Gospel application. This fact can be seen from the news, as follows.

(P1) "**Padang** - Gubernur Sumatera Barat (Sumbar) Irwan Prayitno melayangkan surat ke Menteri Komunikasi dan Informatika (Menkominfo). Dia meminta agar Kominfo menghapus aplikasi Injil berbahasa Minangkabau yang mengehebohkan masyarakat Sumbar beberapa hari lalu". (paragraf pertama)

(P1) "**Padang** - The West Sumatera Governor Irwan Prayitno sent a letter to the Minister of Communication and Information. He asked the minister to delete the Minangkabau language Gospel application that shocked the West Sumatera's citizens a few days ago". (first paragraph)

(P2) "*Dalam surat bernomor: 555/327/Diskominfo/2020 tentang Penghapusan Aplikasi Kitab Suci Injil Minangkabau tertanggal 28 Mei 2020 itu, Irwan meminta Menteri Kominfo menghapus aplikasi tersebut dari playstore google*". (paragraf kedua)

(P2) "In the letter numbered: 555/327/Diskominfo/2020 regarding the Deletion of Minangkabau language Gospel Application, dated May 28 2020, Irwan asked the Minister of Communication and Information to delete the application from the Google Playstore". (second paragraph)

Based on the quote above, the event scheme starts with the appearance of Irwan Prayitno's letter to the Minister of Communication and Information. Thus, the event scheme that emerged from the appearance of Irwan Prayitno's letter becomes a reference or source for *Tagar.* Id's journalist to inform the event that is happening in the Minangkabau society. The information contains an incident regarding Irwan Prayitno's letter refusing the Minangkabau language Gospel application. Irwan Prayitno reasons that the Minangkabau society strongly

object to the application. Then, Irwan Prayitno also considers that the application is very contrary to the custom and culture of the Minangkabau people who have the philosophy of "Adat Basandi Syarak, Syarak Basandi Kitabullah".

Socio-Cultural Context of Minangkabau Society

The socio-cultural perspective that appears from Irwan Prayitno's letter is motivated by the context accompanying it, namely the historical context of Minangkabau philosophy. The philosophy "Adat Basandi Syarak, Syarak Basandi Kitabullah" refers to life rules of Minangkabau people which are based on Islam. In this case, Irwan Prayitno realizes that the Minangkabau people are a society that applies Islamic religious values in their lives. Therefore, Irwan Prayitno has the concept of religious ideology as a discourse reinforcement in the letter he produces. But then, Irwan Prayitno, as West Sumatera Governor, can also imply the power practice through the available position he is holding. Thus, in Irwan Prayitno views Minangkabau language Gospel application is not suitable for the Minangkabau people, predominantly Muslim. Irwan Prayitno sees that the Minangkabau language Gospel application does not reflect the identity, culture, customs, and rules of life for the Minangkabau people.

Conclusion

Tagar. Id's Minangkabau language Gospel Application news represents the form of Minangkabau socio-cultural reality. Irwan Prayitno, as West Sumatera Governor, can reject Minangkabau language Gospel application because he has complete control over events that occur in Minangkabau society. Based on the philosophy "Adat Basandi Syarak, Syarak Basandi Kitabullah", Irwan Prayitno upholds Islamic values that have become life part of the Minangkabau people. Thus, Irwan Prayitno directly rejects the Minangkabau language Gospel application because the application does not reflect Islamic values and the socio-cultural reality of the Minangkabau society.

Gender-Based High School Teacher Field Of Meaning in Indramayu District

Roni Nugraha Syafroni¹
[roni.nugraha@fkip.unsika.ac.id¹](mailto:roni.nugraha@fkip.unsika.ac.id)

Universitas Singaperbangsa Karawang¹

Abstract

The background of this research is because of the researchers' curiosity about the use of language and gender in a region. Researchers took the area of Indramayu Regency, because this area has characteristics that are interesting to study. Indramayu Regency is included in the north coast of West Java Province. This north coast has a characteristic language. The reason the researcher took the language (register) of the teacher was because the researcher came from a teacher training and educational science faculty. Then, the theory in this study draws on sociolinguistic, semantic, gender, and educational theories that come from various literatures, both offline and online. The research method in this research is descriptive analysis which is assisted by the study of documentation, literature, and the results of interviews from various high school teachers in the field if possible, remembering that it is still in a pandemic era. Finally, the findings from the results of this study are that the researchers obtained data in the form of registers that are often used by high school teachers based on gender. Of course there are differences in the data which is then processed by the researcher in the form of a table of the results of the analysis.

Keywords: high school, gender, register, teacher

Introduction

During the current pandemic, the government, through the Minister of Education and Culture, has issued an announcement for students to study from home. . It is like two sides of a coin, there is good and there is bad. The good thing is, among others, teachers and students are protected from Covid 19 transmission, also teachers and students will also be increasingly challenged to be creative in cyberspace. The bad things are that students feel bored because of the large amount of textual material and emotional relationships between teachers and students that begin to drift apart in the delivery of learning material. One of the materials that began to detach emotionally between the teacher and students was the register of the teacher, gender-based. This is because in essence the delivery of this material by the teacher must be offline. In this study, the researcher will explained the theory of register, which is it derived from sociolinguistic theory. Then, in this study, the researcher will take the data from an online site.

In addition to those related to language material, this study also takes material from the social aspect of the language speakers. Because, as written by Munjin (2008), to study and explain language, it is necessary to involve social aspects that image the community, such as social order, social strata, age, environment and others. Until modern times like today gender stereotypes still exist in society, even this has reached children (Hidayati, 2016). The discussion of gender seems old, as old as the earth, you could say that. Hidayati (2016), also writes that the identification of differences between male and female speech has existed for a long time, even before scientific research on this matter.

Then, women and men have different characteristics and different abilities. Differences in verbal abilities are often caused by limb movements, facial expressions, voice and intonation (Sholikhah, 2015). In addition, Sholikhah (2015) also wrote about language differences between men and women, namely, among other things, language and communication problems are more important for women than men because women speak more often than men; men's goals in using language tend to be about getting things done, while women's tend to be about making connections with other people; women are more verbally skilled than men; differences often lead to miscommunication between women and men; they sometimes misinterpret each other's intentions. It causes problems interacting between men and women; and the way men use language is competitive and reflects their common interest in gaining and maintaining status.

Method

This study aims to analyze the two register of the teacher. Because it is intended to explore deeper into the perspective phenomenon used by the author of the article, the appropriate research method for this research is descriptive analysis method. This is consistent with what Creswell (16: 2012) states, analytical descriptive research aims to study a problem and develop an in-depth understanding of a phenomenon. The subject of this study consisted of the two video about teacher register that came from online-based media. As for the place of research in this study is online media. The reason for the consideration of taking data there is because it has a wider range of news without being limited by space and time as well as the ease of access at any time.

To collect data in this study, researchers conducted literature and documentation studies. In order to support literature study data, this research is not only online-based but also offline-based data which retrieves data from various semantic books. This data that has been obtained will be arranged based on needs which will then be analyzed through the stages of data display, data reduction, and data verification (Creswell: 2012).

Findings and Discussion

Language and gender are very closely intertwined. These two things cannot be separated from the spoken life of a language-speaking community. Both are products of a conventional culture. According to Wibowo (2012), it can be said that the variety of languages based on ethnic groups and social groups is at least partly the result of social distance, while the variety of languages based on gender is the result of social differences. Then, women's speech is full of gossip, often reduced or added, does not make sense / illogical, inaccurate or because of educational factors, and often stylish. The things mentioned above, according to Sociolinguistics experts greatly affect the choice of language (Wardhaugh in Wibowo, 2012). This study focuses more on the differences in the language spoken by male and female teachers during the teaching and learning process. This is as written by Zulkarnain & Naria (2018), men are more likely to speak firmly and clearly while women choose the appropriate words to say. Furthermore, according to Zulkarnain & Naria (2018), men tend to talk about sports, politics, and technology, while women prefer to talk about their lives with their families, food, and lifestyle. Of course, different places, situations, and cultures will make a difference in the use of everyday language.

The field of meaning theory is a set or collection of words whose meanings are interrelated. In this theory it is emphasized that in order to understand the meaning of a word, one must also understand a set of vocabulary whose meanings are related (Nafi'ah, and Wahyu 2019). The field of meaning is further divided into two, namely collocation and set, as still written by Nafi'ah and Wahyu (2019), when viewed from the semantic relationship,

words that are grouped into one field of meaning are divided into (a) field groups. collocation; and set field groups. Kridalaksana (in Irwan and Mulyadi, 2017), states that the meaning field is part of the semantic system of language that describes part of the field of culture or reality in a particular universe and which is realized by a set of lexical elements whose meanings are related. It is also related as written by Irwan and Mulyadi (2017) furthermore, namely in terms of communicating, we can never be separated from meaning, both meanings that arise from the form of words, writings, as well as from attitudes and actions.

The field of meaning is part of the semantic system of language that describes part of the field of culture or reality in a particular universe that is realized by a set of lexical elements whose meanings are related (Gani, 2019). Then, Gani (2019), wrote that the meaning component or semantic component teaches that each word or lexical element consists of one or more elements that together form the meaning of the word or the meaning of the lexical element. The lexical element in a field of meaning between one language and another is not of the same magnitude, because it is closely related to the cultural system of the community that owns the language. The meaning of the word is not static, the meaning is not always fixed, it can undergo changes, the word scholar for example, was used to refer to intellectuals, now it is used for university degrees (Haryadi, 1992). Ferdinand de Saussure distinguishes associative relationships into four groups, namely formal and semantic similarities; semantic similarity (general item); common suffix similarity; and coincidental similarity (Parera in Haryadi, 1992). The understanding of the sociolinguistics of Chaer and Agustina (2014: 2) is an interdisciplinary field of science that studies language in relation to the use of that language in society. Then, still according to Chaer and Agustina (2014: 69), the notion of registers with regard to language problems is used for certain (professional) activities. Because it is still in a pandemic era, the researcher will analyze the register data of two videos from online media. This video is a video of a male and female teacher who is conducting the online learning process for students. Then, after the researcher analyzed the register data, the researcher entered the data into the table.

Table 1 Male Teacher Register ->

Resources: <https://m.youtube.com/watch?v=E7BBbQhj2Ww>:

No.	Register
1.	At the second meeting
2.	The material is about big ball game
3.	For this meeting
4.	We discuss the game of football
5.	Definition of football
6.	8th grade PJOK soccer game material
7.	Specific movement of passing and kicking the ball
8.	Specific motion of dribbling
9.	Specific motion of heading the ball
10.	Specific motion holding the ball
11.	Thank you

Table 2 Female Teacher Register ->

Resources: https://m.youtube.com/watch?v=IQh8_HLlie9w&t=109s&pp=sAQA:

No.	Register
1.	Assalamu'alaikum
2.	Introduce my name is Sri Wahyuningsih
3.	From TK Kartika XIX-32 Indramayu

4.	Hello kids
5.	What are you doing? I hope you are healthy
6.	Today I have a story
7.	Who wants to listen to my story?
8.	Have a seat, please
9.	I will tell you about the daughter who is lazy to cut her fingernails
10.	Let's get started
11.	Thank you

Based on the data from the table above, informs that the final result of the analysis of this study is that the register of female teachers is more polite to students, compared to the register of male teachers.

Delineating Bourgeoisie Hero in *Robin Hood* (2018) Movie

Jepri Daud¹, E. N. E. Woro Kasih²

Jepri4ud@gmail.com¹, ngestirosa@teknokrat.ac.id²

Universitas Teknokrat Indonesia^{1,2}

Abstract

This study aims to find the bourgeoisie issue in *Robin Hood* (2018) movie. Robin Hood is known as a story that all people know in the history of fairy tale books. He is known the bandit who steals goods from the rich, for his wealth and the sake of the poor people. Regarding the story, there were many books, films, drama, and TV series about the story of Robin Hood. This study applied Barthes's semiotic theory and cinematography. Moreover, the study applied the descriptive qualitative method. The finding and analysis reveal hidden meaning within the movie, and the producer attempts to convince the audience. By finding the denotation and connotation, the writer discovered that Robin Hood keeps his role the hidden meaning of bourgeoisie hero. The finding proves that Robin Hood is a bourgeoisie hero from the representation of grand manor, fancy costume, weapon, arrogant expression and actions. The movie's director centers too much on the sophisticated performance, costumes, weapons, and action that delineate the people from the bourgeoisie class.

Keywords: *Bourgeoisie, hero, myth, semiotic, superiority*

Introduction

Stories about heroism have always been an exciting spectacle for the audience. The income of films that tell stories about heroism has proven higher and has received many viewers and adapted in various languages. Robin Hood popular story is one of them when adapted into a movie. All people know Robin Hood as a part of the history of fairy tale books. This story has become a legend as Cawthorne (2010) implied "*The story of Robin Hoodappears to be merely a bandit, robbing travelers for his own survival or, perhaps, to enrich himself*" (Cawthorne, 2010, p. 9). This means that in general, Robin Hood is known as the bandit who steals goods from the rich, in the first hand for the wealth of himself and the sake of the poor people. Regarding the story, there were many books, film, drama, and TV series about the story of Robin Hood, in which the story never change which Robin is always accompanied by Little John and Friar Tuck (Rennison, 2012). Since the development of cinematography, Robin Hood has adapted into several movies, and one of them is Robin Hood Movie by Summit Entertainment which was published in 2018.

Robin Hood is an American popular movie released on November 20th, 2018. This movie has got attention as one of the *Robin Hood* popular remake movies in American Hollywood Industries. Those previous remake movies are "*Robin Hood & Marian* (1976) and *Robin Hood: Prince of Thieves* (1991)". Lionsgate Company has remade Robin Hood's story with different experiences. The *Robin Hood* (2018) movie producers are Jennifer Davisson and Leonardo DiCaprio, supported by Otto Bathurst's director. Taron Egerton cast the movie as Robin Hood, Jamie Foxx as John, Ben Mendelsohn as Sheriff of Nottingham, and Eve Hewson as Marian. The budget for making this film was 100 million dollars.

Unfortunately, this movie was rated relatively low it was rated five from 10. Moreover, the worldwide income is only 86 million dollars. The review of the film revealed that the the latest adapted Robin Hood film “*feels like a version of Batman with a bow and arrow instead of a utility belt*” (Hadadi, 2018) and “*is a malleable tale, but the core is always the same: a cocky underdog fights the power on behalf of mistreated citizens*” (Seitz, 2018). As *Robin Hood* (2018) movie gathers so much attention from the reviewer, movie studies have proven beneficial in analyzing human needs and social understanding.

Movie studies focus on movies reflecting daily life and imply meaning or something inserted (Patton, 2007). As one of literary works, the movie sometimes represents identity caused by the colonized society (Mertania & Amelia, 2020). This movie represents different identities of people delineated from the characters in the film. The film's producer tries to indicate the social problems in real life and pours their idea into the movie. On the other hand, movies must fulfill the film industry's new obsession with prejudice. Movies denote the cultural product in modern industry. Many moviemakers believe that film can be a platform for sharing thoughts and views with the media. The movie is considered a remarkable work of art. It has a powerful influence on its viewers because it combines art, technology, music, literature, and drama and is fascinating to watch (Petrie & Boggs, 2018). The movie, like poetry, deals with imagery and symbols. Drama and film have a conflict and a storyline with action and gesture, like novels and short stories. Therefore, the film shares many elements with short stories and novels. Character, viewpoint, conflict, plot, and setting are components that can be analyzed using literary theory (Bennett & Royle, 2005). Those components create additional benefits for producers and viewers to understand the storyline in the movie, in this study, in *Robin Hood* (2018) movie.

This movie characterizes Lord Robin of Loxley, starred by Taron Egerton, who lives in the manor and has the social status as a lord, which means high-class society. The sheriff of Nottingham sends him to war, takes all his properties, and fakes his death on the battlefield. When he returns to Nottingham, Robin witnesses the commoners planning to rise against the government that oppresses and exploits them and learns that Marian is now involved with their aspiring leader, Will Tillman. Robin is prevented from making contact with her by the Arab whose son he tried to save. The man introduces himself as Yahya called John. Robin and Yahya finally work to end the war by stealing the money taken from the people to fund the church's conflict. Marian seeks Robin upon learning that he is alive, but he chooses not to tell her of his plans for her protection. This invites battle between Robin Hood with his followers and the Sheriff of Nottingham with his soldiers. Robin finally claims revenge on the Sheriff by killing and hanging him. Robin and John flee to reunite with Marian and the townspeople who assisted them. Some studies discussed this story as the *Robin Hood* (2018) movie has invited some critical comments and unsatisfying responses after watching the movie.

The *Robin Hood* (2018) has been developed through era and the movie has been adapted many times. Thus, there have been many studies discussing and focusing on the movie. Those studies center on different perspective and discussion. Some studies (Paonessa, 2013; Keen, 1961; Seal, 2009) revealed that Robin Hood remains as the myth from certain

English folklore. Clouet (2001, p. 37) also stated that the *Robin Hood* movie cannot accommodate the issue in the past and has adapted the subject to today's condition. The studies on Robin Hood movies also revealed the distinct message from the previous ones, usually delineated as the hero for the poor. Robin Hood movie is stated as "*a distressed gentleman fallen from aristocratic grace*" (Knight, 2007). The newest adapted *Robin Hood* (2019) movie, according to Mayer (2019) has shown "*men of power, taking more power from the blood of innocents.*" Those studies indicate that Robin Hood movie as movie production has accommodated the film's condition. The movie and film director seems forced to adapt to today's scenario for Hollywood industries as the biggest source of business in movie industry. Hollywood often becomes the means for film artists and directors in delineating heroes' stories who have duties to save minorities' societies. This Hollywood scenario about hero and minorities have been hot issues in American literary works (Aryangga & Nurmaily, 2017; Kasih, 2018). That consideration invites some challenges for doing studies in *Robin Hood* movie. As the movie adapts to today's viewers, some misconceptions lie behind presented in the movie. This study finally aims to delineate the bourgeois hero in *Robin Hood* (2018) movie.

Theory and Method

The study applied Roland Barthes's semiotic theories in analyzing elements of denotation and connotation. Semiotics is often used to analyze film (Ferrell, 2000). Movie researchers observe further signs in each scene of the storyline. Movie and semiotics are interconnected. Movies deliver a message which functions as a sign from characters, setting, gestures, costumes, facial expressions, and dialogue. Barthes considered a sign that exists in society, namely myths formed from the stories developed in the community. According to Barthes (1986), the system of communication in the myth is the message. The messages are not objects, ideas and concepts but rather a means of significance, of form. Myths are conveyed not only in verbal form but also a mixture of verbal and nonverbal. Generally, myths are closely related to habits and rituals which can shape stories. Myth has a historical basis, both classic and non-classical myths because myths are the reasoning selected through history. The myth is not reflected directly.

The objects in this research are *Robin Hood* (2018) movie. Several steps involved in collecting the primary data are watching the *Robin Hood* (2018) movie as primary data repeatedly to understand and comprehend the point relevant to the discussion. The next is collecting all the data required by observing scenes that may correlate to the myth of the bourgeoisie. Then it marks some points inside the movie to answer the question by noting the scene, camera angles, and plot of the story. The next is capturing scenes in the movie to classify and determine the relevant data. The next step is determining the signifier, the marker, denotative meaning, and connotative meaning. The last step is doing the analysis and getting a conclusion.

Findings and Discussion

In this *Robin Hood* (2018) movie, the study gathered signs to analyze connotation and denotation level. There are some scenes and dialogue that represent the signs from the

picture, character, actions, costume and the sound. The signs gathered from the movies, in this study, are seen from manor, toff, fashionable costume and donating money. The signs are then analyzed by looking at the perspectives from the society that has become myth believed. This myth can finally reveal that the *Robin Hood* (2018) movie accommodates different meaning behind from what it is believed in the common society.

Manor as the Sign of Wealth

This scene is about the man who lives in the manor. The movie is started by showing the manor house. The building looks giant and majestic. It is the tallest compared to other surrounding houses. The camera moves and centers to the house with a horse around. The house is called 'manor' stated from the man inside who said "*I'm the spoiled toff who lives in this manor*". The director of the movie spends more time in actualizing the building and the surrounding. The great of the house is also accompanied by the man performance who wears fashionable costumes which differentiate from the people around him.

This scene is about the sign of 'manor', which denotes wealth that the person can afford the big building and get much money. In English society, the manor with a magnificent look of the building represents a noble family. The manor usually functions as the main house of the lord of the manor and the center of European feudal liveliness. The mansion can also serve as the administrative center, courts, school, dance hall, communal meals, and parties. As a noble family usually owns the building, the owner must have power in the society. The lord of the manor may have held several resources within a county or, for example, in the case of a feudal baron, expanded across a kingdom, which he occupied only on occasional visits. The manor's business required to be directed and controlled by regular manorial courts, which appointed manorial officials such as the bailiff, admitted copyhold leases to tenants, fixed conflicts between manorial tenants, and maintained justice in general. A large and suitable building is generally needed in the form of a great hall, and a solar might be attached to form accommodation for the lord. The man who lives inside the house must then be a rich person who owns much wealth. He also holds a horse which also signifies 'wealth'.

Toff as the Rich Claim

This scene is also found in the early part of the movie which delineates the man who lives in the manor and thought himself as 'spoiled toff'. This man talks to the woman who has an interest feeling to the man. The camera centers to the man's face (Robin) who looks pathetic and arrogant by claiming '*spoiled toff*'. This expression is also

accompanied by representation of costume and surrounding shown by the movement of the camera.

Toff as a sign in scene actually means as a derogatory stereotype for someone with an aristocratic background or belonging to the landed gentry, particularly someone who exudes an air of superiority. By claiming himself as toff, this scene portrays how Robin actually acclaims himself rich and is proper as the upper class people. Toff can be stated from different perspectives, the wealth, the fashionable person and the skillful person who owns much money. By stating himself toff, the man (Robin) has created the border between his position and the woman who is standing in front of him.

Snobbish Hero

This scene portrays the man who enters the riots between the government and the people. The man shows up in the poor side, the people. The costume worn by the man are uniform with sophisticated arrow weapon attached at the back of the man. The man angrily faces the soldiers who have intention to catch him. A man in a leather jacket and hood and a mask that covers his face looks cool when facing an army of soldiers. The man is accompanied by powerful arrows in his back that have been modified with a neat model clearly looked and made by an expert arrow maker. The man throughout the film continues to wear clothes with contemporary models such as leather jackets and fashionable jackets and scarves. The man in a contemporary leather jacket is confronted by a soldier who looks like a contemporary army troop with a helmet on his head.

Fashionable or stylish man usually refers to 'metrosexual man' that means a young man with an easy money to spend for fashion. This man is usually stated to be snobbish as he usually wears something 'pricy'. The man in the scene, stated as Robin, is always given a stylish costume by the director of the film. This conditions moves to certain meaning that Robin has more attention to 'fashion' than to his 'heroic action'. Stylish clothes show that society in general still focuses on appearance to be a leader and a hero. The hero shown by Robin's character in this movie should focus on Robin's activities on humanitarian activities with the existing poor people. However, Robin Hood occupies the spaces of the rich which is shown in many scenes. By wearing cool clothes, Robin Hood appears in front of his people who need help. On the other hand, there is a very real gap when Robin stands in front of his people in his modern clothes and other people around him with plain and simple clothes.

Dropping Money as the Claim of Superiority

This scene shows the man who is willingly donating money by dropping much coins to the tray in church ceremonies. This scene is taken from the setting where there is the big building which there is the sound of people praying. Suddenly, there is a sound of coins falling on top of something. The camera spots the people lining up, dropping coins on the tray in the room and a giant pillar behind the people. Moreover, a man is seen wearing a black shirt and wearing a golden necklace, followed by the people behind him. A man drops a bag of gold coins. A man wearing a black shirt drops a bag of coins on a tray. Some people behind him see the action of a man who is dropping a bag of coins. The people or the crowd are gasping when looking at the man dropping a coin. A man in a black shirt with a blue coat clapped his hands and said, *"You put the rest of us into shame."* It seems some people want to know who drops so many coins. This crowds behind the black man in the blue coat. Stared in the same direction as the person in blue, the people behind the man wearing a blue suit wearing a black shirt and one of the women wearing a purple dress there, the person wearing a hat. Moreover, the people there look very neat.

The building is a church that becomes the symbol of religious activity. People are praying and donating money by dropping coins which means that they are donating money. Donating money means giving money the people they have and becomes the obligatory part of church members. By donating money, people contribute certain percent's of their income. By proving their participation in giving money to the poor, they deserve to have bless from the church and show people concern of mercy, justice and faithfulness to the God. The image moves to a crowd of people who are laying a few coins on a tray. The scene portrays that a prayer person was holding the tray in the building. Almost everyone in this building wore slightly dark clothes, and they wore gold necklaces. This image implies that the rich are happy to wear fancy jewelry and clothes when attending important events. It is not only when attending important events that the bourgeoisie can be distinguished by the way they dress. One of the characters seen here is Robin in who also participates in the event. Following the picture, Robin drops a bag of gold that attracts the donors' attention in the room. The scene shows that Robin is a wealthy figure by donating a gold bag that attracts the people's attention. By giving a bag of coins, Robin claims himself richer than others. He has control over others. The bourgeoisie always shows their wealth by the amount of money they have. Robin here is categorized as a bourgeois person because he has many gold coins and is given to events at the church. Then the people around him seemed to admire the action that Robin in the church carried out. In the context of society, rich people will respect their people. In this case, the bourgeoisie will always support each other because they know wealthy people. This scene also shows that the bourgeois people wear luxurious clothes in their daily life, not only for events but also in their daily lives. People think that the event is to help the poor in their life. The proletariat is those who receive this contribution.

In this *Robin Hood* (2018) movie, the character of Robin represents the existence and the values of the bourgeoisie against monarchical and clerical institution. In fact, Robin has been a part of the monarchical system. The director in this movie directs the movie into different angle of the common Robin Hood stories. Robin usually becomes the epitome of proletariat rebellion. His consciousness to the condition of the people forces Robin to do such double identities. This movie consciously put the idea of being 'existing' or being 'seen'. Robin is found in the crowd of the poor to take power as the leader from the poor. The rich still wins and Robin has always been rich as the movie firstly represent claim of 'manor' and 'toff'. Robin does not necessarily represent himself as 'the robber' to help the poor. Robin can easily spend his money to help the poor, but he always dominates everything by taking the advantages from the poor people. The movie strongly delineates how Robin enjoys the life as the rich by always wearing 'fashionable costume' which cannot be bought by the poor.

Robin Hood in *Robin Hood* (2018) movie is the real representation of modern hero. He is the real bourgeoisie hero even though he occupies capital from the money he robs. His effort in robbing others to fulfill his capital means that he has no freedom in having his destiny. The way he robs the rich as bandit and his manipulation of his role as both lord and bandit proves him a criminal. As a bourgeois man who has a manor at the beginning of the scene, Robin enjoys daily life of the bourgeoisie by wearing luxurious clothes. His participation with his people is shown much by the director of the film.

Conclusion

This study revealed that Robin Hood does not represent the hero for the poor. The previous claim in the stories and other adapted Robin Hood movies has moved to today's issues. The movie director has tried to represent the hero with the sophisticated technology attached to the hero performance. By having manor, nice Robin Hood costume, and modified arrow as a weapon, Robin Hood becomes the hero for the bourgeoisie. He takes advantage of the poor and the Black to have his position as the strong White hero. The director does not correctly place the characters in the film according to the actual characters. Robin Hood can become a bourgeoisie and proletariat. Robin Hood, like the bourgeoisie, can enter the association by entering a church for bourgeoisie people. On the other hand, Robin Hood prefers to join proletarian friends. In the social context, a person pretends to enter a specific environment to achieve a particular goal. Society is getting smarter, so there are no groups to argue. Groups that have different roles are only used as tools. Someone will quickly enter into other groups when they can use money and position. This study finally centers on Robin Hood identities as the hero for the bourgeoisie. The director of the movie fails to place Robin as the hero for the poor. The director, in addition, can deny Robin participation in a bourgeois environment, but Robin in the movie actually enjoys his role.

Students' Perception Towards Learning Literature Through Podcast

Putri Rindu Kinasih¹, Mery²

Universitas Bunda Mulia^{1,2}

Abstract

Despite its importance, it must be admitted that teaching literature, especially in the EFL context still becomes a challenging thing to do. One of many reasons why teaching literature is very effortful is because there are students who possess negative attitudes towards literature study. Numerous students still think that literature is boring and lack of fun (Alfauzan & Hussain, 2016; Al-Mahrooqi & Al-Wahaibi, 2012; Shakfa, 2012; Kabilan & Kamaruddin, 2010) which leads to lack of interest and motivation in class (Hussein & Al-Emami, 2018; Işıkli & Ö.Tarakçıoğlu, 2017; Shakfa, 2012; Blanco, 2004). Studies show that there is a chance the problem lays not with the students but with the professors themselves. Furthermore, lecturers nowadays must be aware that the students belong to the Generation Z era (Filipovic, 2020; Shatto & Erwin, 2017) who are looking for authentic and meaningful relationships, opportunities to connect through a variety of in-person and online platforms along with value and return on investment (Barber, 2020). Consequently, teachers must creatively find a new approach in teaching literature. On the whole, a considerable amount of research had successfully spotlighted the positive result of the implementation of podcasts in teaching English in EFL context (Rinda, 2020; Tabatabaee & Rezvani, 2019; Yoestara & Putri, 2019; Dmytriieva, 2018). However, none of the study above showed depiction of students' thoughts as they use podcast in learning literature. The previous research of podcast mainly focused on listening and speaking skill. Thus, this research attempts to see students' perception toward the use podcast in learning literature. The data of this research was taken from written questionnaire and interview which represented the 45 participants' perspective. Results showed that students have a positive recognition towards the utilization of web podcasts in learning literature; over 80% of the participants stated that the podcast increases motivation in learning literature. In addition, the participants explained that trivia and issues discussed in the podcast evoke their curiosity which make them interested to follow up the information by themselves. Lastly, the study showed that the podcast helps more than 90% of the participants to see that literature subject is interesting as they are intrigued to explore professions related with literature study. In other word, the podcast helps them to grasp how the materials they learn in class is related with the experiences from the guest speakers. However, it must be understood that applying podcast also has its downsides, that is: using podcast is very challenging for students with low competence as the podcast is delivered mainly in English. Thus, using podcast in literature study is more effective when it is used for intermediate or advance level.

Keywords: ICT, podcast, literature, perception, generation z, millennials

Introduction

Despite its importance, it must be admitted that teaching literature, especially in EFL context still becomes a challenging thing to do. One of many reasons why teaching literature is very effortful is because there are students who possess negative attitudes towards literature study. Numerous students still think that literature is boring and lack of fun

(Alfauzan & Hussain, 2016; Al-Mahrooqi & Al-Wahaibi, 2012; Shakfa, 2012; Kabilan & Kamaruddin, 2010) which leads to lack of interest and motivation in class (Hussein & Al-Emami, 2018; Işıklı & Ö.Tarakçıoğlu, 2017; Shakfa, 2012; Blanco, 2004). Many factors cause boredom and lack of interest in literature class. From the teacher's side, there is an issue where teachers, by seeing empirical evidence still apply the conventional teaching (Permanaludin, 2017). For example, literature is still taught using grammar-translation method with no emphasis on material from literature studies (Alfauzan & Hussain, 2016). In addition, Miall (as cited in Basthomi, 2003) added that sometimes the teacher only asks students to memorize a great number of literary terms. On the other side, students nowadays are interested in profit and therefore care only about pre-professional degrees. Students are reluctant to learn literature because they think that learning literature does not help them get employment (Novianti, 2016; Morson, 2015; Kateregga, 2014). Undoubtedly, serious solution must be found concerning the problems showed above.

Prof. Gary Saul Morson (2015) stated that the phenomenon regarding college students' reluctance to study literature may result in consequential problems such as declining enrollments in literature courses. Rogers (as cited in Morson, 2015) said that we are all ignorant, only on different subjects. As has been discussed above, studies have shown that students experienced boredom and lack of enthusiasm. Additionally, it was also mentioned that there is a chance the problem lays not with the students but with the professors themselves. Many humanists experts, including literature lecturers and teachers, have difficulty in presenting their case because they are used to speaking one way among themselves and another way to outsiders (Morson & Schapiro, 2017). Consequently, teachers must creatively find a new approach in teaching literature. Thus, Prof. Morson believed that to teach well, teachers must have to place themselves position of the learner who does not know the basics and has to be persuaded that the subject is worth studying. And the teachers must subtract one of those assumptions is that literature is worth the effort of reading (2015, p. 1-3).

Relating to the problem of students' boredom and lack of interest, Prof. Morson (2015) asserted that the first task is to get the student to want to read literature. It is worth bearing in mind that most undergraduate students today are part of the millennial generation. However, the next wave of students belongs to the Generation Z era (Filipovic, 2020; Shatto & Erwin, 2017). Seymour (2019) explained that Generation Z is the first to be born into a time when that technology existed. They are the first digital natives, born between 1997 and 2012, into a world of vast technological advances and innovations. They are unlike other generations, who either grew up without or came into adulthood during the rise of social media, smartphones, and instant accessibility of information. Consequently, to gain millennials and Generation Z students' engagement and understanding, technology incorporation is inevitable. Furthermore, Gen Z students are looking for authentic and meaningful relationships, along with opportunities to connect through a variety of in-person and online platforms. They want services that are easily accessible in-person and online and that are available twenty-four hours a day. These students are driven by their passions, are empathic, and are looking for others to be a part of their personal and professional journeys. This generation is also constantly seeking value and return on investment (Barber, 2020).

Regarding the issue above, scholars believed one effective approach that can be used in teaching literature is by using podcasts. Studies show that the largest *audience of podcasts* is found within the millennials and Generation Z. Even study shows has found that at least one-third of millennials listen to the podcast every day, whereas 75% of generation Z have access to the paid version of podcasts (Parija & Padmavathi, 2020; Schönbeck et al., 2019). Also, the advancement of ICT (Information and Communication Technology) has brought creative courses in second language learning, particularly English.

Hence, study about podcast application in teaching English in EFL context has been done extensively (Rinda, 2020; Tabatabaee & Rezvani, 2019; Yoestara & Putri, 2019; Dmytriieva, 2018). Firstly, Rinda (2020) studied students' perception of the use of podcasts in learning to listen. The study showed that students have a positive recognition towards the utilization of web podcasts in getting the hang of tuning in. She added that students agreed that computerized communication could help them in learning English and they have availability in using podcasts as an elective technique to learn English. What's more, the web recording in like manner convinced them since it was bolted for their potential benefit. The substance of the podcasts and clear neighborhood address got from podcasts could hone their capacities especially listening inclination.

Secondly, Tabatabaee & Rezvani (2019) analyzed the potential effects of using podcasts on idiom and vocabulary learning of Iranian EFL upper and lower intermediate learners as well as their attitudes toward learning via podcasts. Their research indicated that students performed better in vocabulary and idiom learning after receiving the treatment. In addition, listening to podcasts was more effective for the improvement of upper-intermediate learners than it was the improvement of lower intermediate learners, and third that the relevant treatment (i.e., the use of podcasts) was significantly welcome. All in all, they concluded that the use of technology is more likely to leave a deeper impression on learners' memory. Thus, they suggested that the use of podcasts should be advocated in all educational fields.

In line with the previous studies above, Yoestara & Putri (2019) examined the impacts of using podcasts in improving listening and speaking performance. They found out that podcast is an effective teaching tool to enhance the Indonesian students' speaking and listening skills since it can provide access to authentic materials, support self-regulated learning, increase language confidence as well as create active learning. However, Yoestara and Putri reminded that to integrate the use of podcasts effectively into the language classroom, the teacher should consider TPACK (Technological Pedagogical Content Knowledge) framework and should be aware of the possible obstacles.

Lastly, Dmytriieva (2018) investigated the efficacy of the use of podcasts experimentally as a means of teaching English. The results showed that in the experimental group where the students listened to English teaching podcasts the average score has increased. Moreover, it should be emphasized that the students of the experimental group also mentioned that listening to the podcasts enabled them to use the new vocabulary in everyday communication, and the short, highly-repeated, and fun episodes positively influenced their perception of teaching English as well as helped them to overcome the fear of speaking English. Thus, the results of the experiment have proved the effectiveness of using podcasts for teaching the English language.

On the whole, a considerable amount of research had successfully spotlighted the positive result of the implementation of the podcast in teaching English. However, none of the studies above showed how podcast is used to develop students' motivation in learning literature. The studies above mainly focused on finding out the impact of using podcasts in teaching listening and speaking. Whereas, there is an urgent need to make literature class less boring as there has been a popular kvetch among literature professors is that students spend so much time on social media that they have the attention span (Morson, 2015). In addition, little research has examined students' psychological drives for using podcasts. Few studies have questioned exactly why students use podcasts and how likely they are to appreciate their use in the educational environment. This research attempts to see students' perceptions toward the usage of the podcast in learning literature. Therefore, this research focuses on the following question; What are the students' perceptions on the usage of podcast in learning literature?

Theory and Method

Information Communication Technology (ICT)

Information communication technology (ICT) is a powerful tool as it significantly extends people's abilities, and as a learning tool, it is particularly effective. The application of ICT is also believed to take place at a much deeper level. In common with all technologies, ICT embodies the accumulated understandings of its makers. ICT hardware and software are the products of extensive human thought; these are physical and intellectual, and highly organized and structured. On the students' side, the implementation of ICT is considered highly beneficial as it resulted in active interaction and dynamic learning (Crawford, 2013).

Podcast

Interestingly, podcasting has been around for over a decade. Nevertheless, there is still an uneasiness in defining it as a medium. According to Morris & Terra (2006) the domain *podcast.com* was originally registered back in 2002, however, nothing was ever done with it. While some assert the name has connotations to the popular *iPod* device created by *Apple*. In many ways, podcasting can be defined as a 'new' form in that it has facilitated entry into the creative production of audio for individuals and groups, with no broadcasting background (Llinares et al., 2018). Podcast content and frequency can be diverse, in terms of material covered, and length, ranging from hours to three-minute newscasts, through to daily twenty-minute news summaries or commentaries, to weekly one-hour in-depth discussions. The length of the podcast may depend on what material is to be covered (Bell et al., 2007). Following its popularity and rapid growth method of mobile learning among the millennials and Generation Z, nowadays podcasts can be divided into two types: audio podcasts or video podcasts/vodcasts (Parija & Padmavathi, 2020).

Podcast for educational purpose

Information Communication Technologies (ICT) such as podcasting have opened new possibilities for educational purposes. For an instructor it means more tools to use in their organization of instruction; for students, greater motivation to learn free of the time and space restraints posed by the typical classroom's walls and strict schedule; and for an educational institution it means a potential marketing opportunity (Khaund, 2010). A survey has found that at least one-third of millennials listen to the podcast every day, whereas 75% of generation Z have access to the paid version of podcasts. Firstly, the most important benefit of podcasting is that it helps to overcome the time restrictions of regular didactic lectures. The podcast allows educators to do creative podcasting to enhance the knowledge and learning experience of the students. In addition, it also helps for their better understanding of specific as well as important topics. Moreover, it is an amazing tool for slow learners to improve themselves in a self-paced manner and is extremely suitable for the auditory type of learners. Lastly, the podcast also has another benefit – a personal practices experience because it produces a sense of private space. Podcast listeners who wear headphones can create a sound bubble around themselves as a means 'to claim a mobile and auditory territory for themselves through a form of 'sensory gating' (Prakash et al., 2017; Bell et al., 2007).

Furthermore, a creative podcast is considered effective for teaching specifically difficult topics. Hence, teachers can use them as a complementary tool to online teaching to improve the students' understanding. What is more, it helps the slow learners to learn at their own pace and for engaging visual learners we can provide the content as vodcasts. Having

students discuss the content of the vodcast encouraged students to use it in the learning process (Florini, 2020; Parija & Padmavathi, 2020; Pilkington, 2017).

How Vodcast is used in Teaching

Pilkington (2017) stated that the application of using podcasts can be classified into three basic types:

- a) Lecturer-based or classroom vodcast is simple recording of lecturers, whether presented by the usual, or guest, lecturer. This type has also been referred to as substitutional vodcast.
- b) Supplementary vodcasts are used to supplement the material presented in lectures. Such vodcast can be made up of extra explanations, worked examples, feedback, and comments, course-related guidelines, summaries, or field guides.
- c) Creative vodcasts are those prepared by students as part of their learning experience, often in collaborative forms of learning.

For the lecturer-provided vodcast above, the vodcast can use existing material or be one created by the lecturer.

Millennials

The term ‘millennials’ referred to the set of individuals born in or after the year 1982 (Sharma, 2020, p. 2). Below, are the characteristics of millennials that should be aware of according to Sharma (2020):

- a) Millennials form a techno-generation that avoids face time: the tech-savvy nature of millennials also influences the way they communicate. The youth today spend a major chunk of their time communicating over social media and remain largely devoid of the human touch and feel factor that comes with a face-to-face conversation.
- b) Millennials look for instant gratifications and therefore, do not believe in toiling for years to earn promotion. Then, their individualistic and self-absorbed orientation prompts them to prioritize their interest over the interest of the organization they belong to.
- c) Wanderlust: Millennials are characterized by a sense of wanderlust, that is, a strong desire to travel. Moreover, their openness toward new cultures and the passion for exploring the unknown takes them places.
- d) Accustomed to rapid feedbacks: millennials might get frustrated by the delayed responses from older employees. The older generation, on the other hand, may even be offended by a lack of face-to-face or voice-to-voice communication (p. 5-8).

Generation Z

The term ‘Generation Z’ referred to the set of individuals born from 1995-2009. Studies showed that when they are asked what has defined and shaped their generation – the answer was ‘technology’. It is not only the number of devices and how frequently they interact with digital technologies but how technology has shaped their thinking. Technology becomes core to their learning and becomes almost like a companion to them, which is extraordinary. For Gen Z, people see deep technological immersion that seems to have almost reached saturation point. The virtual world is as valid as the physical world for many Gen Zs. There is a seamless integration between online and offline as they move between face-to-face and digital platforms for social life, conversations, learning, assessments, work and play with fluidity and ease (Madden, 2019, p. 2). Gaidhani et al. (2019) stated that Gen Z communicates largely through video. For example, when they want to know how to beat a video game, they search online for a video to tell them. Simply, there is no reading involved

(p. 2810). Lastly, members of Generation Z describe themselves as highly motivated by engaging with their passions, specifically those to causes they care about. Generation Z also finds motivation through achievement, especially of knowing they could gain credit towards the next milestone or an opportunity for advancement (Seemiller & Grace, 2019).

Perception

The word ‘perception’ can be used in two different ways. Firstly, it refers to our experience of seeing, hearing, touching, tasting, and smelling objects and individuals in the surrounding world. As human observers, we can describe our subjective experiences. On the other hand, the word perception can also be used to refer to the processes that allow us to extract information from the patterns of energy that impinge on our sense organs (Rogers, 2017). Perception is like a set of lenses through which an individual views reality. These lenses evolve from perspectives of location, subjectivity, particularity, history, embodiment, contradiction, and the web of teachings imparted to the individual. Qualitative researchers are most interested in individual perception to gain access to understanding the meaning of the experience for an individual, a culture, and or social groups. If the goal of the qualitative researcher is understanding, the perceptions of others are critical in interpreting data in a study (Given, 2008). In addition, a Likert scale that assesses opinions along a continuum of agreement is one of the most common types of ordinal scales and is used to measure attitudes or opinions (Cunningham, 2021).

This study adopts the mixed-method approach. Dörnyei (2007) defines a mixed-method study as “the collection and the analysis of both quantitative and qualitative data in a single study with some attempts to integrate the two approaches at one or more stages of the research process” (p.163). He also stated that the purposes of mixed-method are to gain a more comprehensive understanding, to validate findings from a different perspective, and to reach multiple audiences (Dörnyei, 2007). In other words, this method combines quantitative and qualitative designs.

Quantitative data research is typical of numerical data that are usually obtained from tests or questionnaires. From the instruments, the numerical data can be in the form of percentages and proportions (Nunan & Bailey, 2009). When using a questionnaire, one of the important things to consider is sampling. Dörnyei (2007) explains one of the considerations is ‘statistical consideration’. Based on statistical consideration, the basic requirement for quantitative study is that the sample should have a normal distribution, which can be reached when the sample includes 30 people or more (Hatch & Lazaraton as cited in Dörnyei, 2007).

In a mixed-method design, as the complement of quantitative data, this research will be also conducted by using qualitative research method in which, (Given, 2008) believed that this method is designed to explore the human elements of given topics, where specific methods are used to examine how individuals see and experience the world. Given added that qualitative research methods are best for addressing many of *why* questions that researchers have in mind (p. xxix).

Research Procedures

The research will be started by understanding the production of the podcast by joining “Kelas Podcast Siberkreasi”, a 6 session meeting workshop which is held by Siberkreasi, KOMINFO, and *Pabrik Soeara Rakjat*. Then, the writer created the media; a four-episode of the complementary podcast in which the theme and topic are taken from the material of Introduction to Literature class based on ‘The Norton Introduction to Literature’ (Mays, 2017). The object of study is selections of a series podcast that discussed literature genre: — fiction, poetry, and drama (as well as nonfiction prose). The writers also carefully selected guest speakers that work in the literature field such as a national movie scriptwriter, an

official online movie critic who is registered as a member OFCS (Online Film Critics Society) which is the world's oldest organization of online film critics and OFTA (Online Film and Television Association), a stage play director, and an international award-winning poet.

Then, within the four weeks, the writer will assign the students to listen and watch the *vodcast*. Afterward, the students will be asked to explain their perceptions and opinion by filling in the questionnaire. Lastly, a semi-structured interview will be done to find more opinions and deeper insights towards the use of podcast.

Subject of research

The subjects of this study are the second-semester students, majoring in English Language and Literature (BBI) of UBM. Thus, the students are familiar with the literary works, and various terms of literature as well. The students are from the second and fourth semesters. There are 45 students, 25 females and 20 males.

Research Instrument

A questionnaire was used to see the students' perceptions towards the use of podcasts in the literature study. The questionnaire is adapted from Sutoto's (2007) study. Then, a semi-structured interview will be done to find more opinions and deeper insights towards the use of podcasts. The interviewees were chosen based on random sampling. The interviews were audio-recorded then transcribed. After that, the transcription was analyzed to support whether the perceptions went along with the result in the observation and the questionnaire.

Data collection procedure

After giving exposure to the podcast in the fourth week, then a questioner is distributed and collected afterward so that the students' perceptions can be analyzed. The questionnaire will be distributed by utilizing Google Form. Then, a semi-structured interview will be done to find more opinions and deeper insights by using a recorded *Zoom Meeting session*.

Data analysis procedures

The research will be done in four meeting sessions. Every session, the writer will give a new podcast episode based on the topic. In the first episode, the podcast discusses fiction. Then, in the second episode, the podcast explores further poetry. Afterward, in the third week, the podcast talks about drama. In the fourth week, the writer gives a podcast which talks about nonfiction prose. After four weeks of exposure to the podcast, then a questioner is distributed and collected afterward so that the students' perceptions can be analyzed. Lastly, a semi-structured interview will be done to find more opinions and deeper insights towards the use of L1. The interviewees were chosen based on random sampling.

In addition, the weekly videotape will also be analyzed to see the students' engagement in class during the application of the reader-response approach. From the videotape, the writer hopes to see the response as well from students after they listen to the podcast.

Findings and Discussion

Firstly, the study shows that learning literature by using podcasts is considered productive.

Learning literature through podcast is productive
45 responses

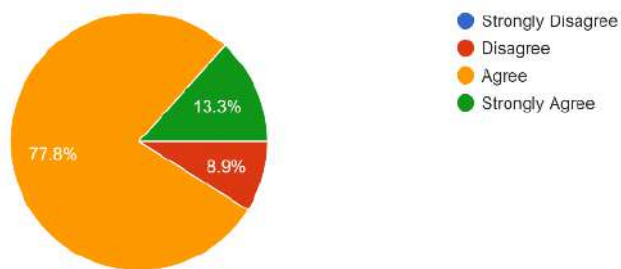

Figure 1. Students' perception whether podcast is productive

From the chart above, it can be seen that more than 90% students believed that learning literature through the podcast is productive. The students stated that the podcast can be accessed anytime thus they can find the best time to absorb the knowledge shared in the podcast. This finding is aligned with the previous research which stated that the most important benefit of podcasting is that it helps to overcome the time restrictions of regular didactic lectures. In addition, the podcast is believed as an amazing tool for slow learners to improve themselves in a self-paced manner (Prakash et al., 2017; Bell et al., 2007).

Secondly, the study shows that the podcast increases students' motivation in learning literature. The students' motivation is increased as they are interested in knowing further the trivia shared by the guest speaker.

Learning literature through podcast increases motivation in learning literature in class.
45 responses

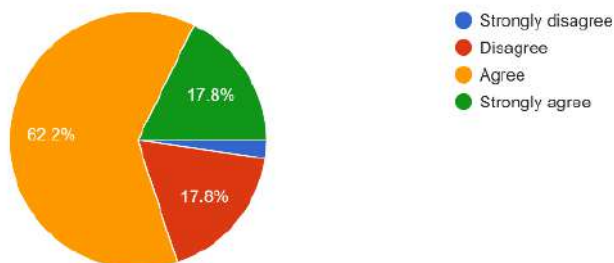

Figure 2. Students' perception whether podcast increases motivation

From the chart above, it can be seen that 82,2% of the participants agree that the podcast increases the students' motivation in learning literature in class. From the interview, the participants stated that listening to the podcast is different from listening or watching additional materials from *Ted Talk*. The material in the podcast is related to the topic in the class, yet it is conveyed less formally. The interviewer and the guest star are actually talking or discussing an issue, so they are not lecturing (Participant A, personal communication, May 21st, 2021).

Additionally, 95.5% of the participants agree that the podcast helps them in understanding the topic given by the lecturer as shown in the chart in Figure 3 below.

The podcast helps to develop my understanding on the topic given by the lecturer
45 responses

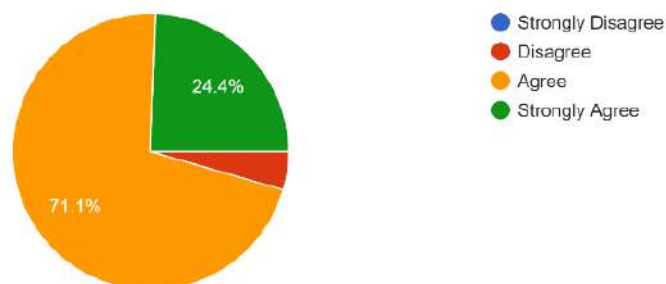

Figure 3. Students' perception whether podcast helps students' understanding

During the interview, Participants B explained that the podcast helps him a lot because he cannot read texts intensively for a long period. He said that he is not accustomed to reading long texts (Participant B, personal communication, May 21st, 2021). Participant B's statement is aligned with the study which stated that Gen Z communicates largely through video as they use YouTube as if it is Google. In addition, the tech-savvy nature of millennials influences the way they communicate. In short, they don't read to find out the answers (Gaidhani et al., 2019; Sharma, 2020). This issue happens because technology has shaped their thinking (Madden, 2019, p.2). Therefore, using the podcast as a supplementary is suitable for the millennials and Generation Z students.

Thirdly, Rogers (as cited in Morson, 2015) stated that students of literature major experienced boredom and lack of enthusiasm. Taking this into account, this study proves that learning literature by using podcasts is considered interesting.

Learning literature through podcast is interesting
45 responses

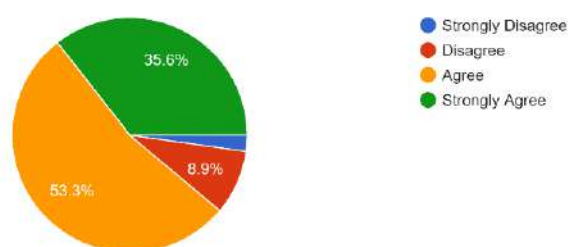

Figure 4. Students' perception whether podcast is interesting

From the chart above, it can be seen that 88.9% of the participants agree that learning literature through the podcast is interesting. From the follow-up interview, the participants stated the podcast consists of interesting trivia which triggers them to find out more. For example, one of the participants explained how the trivia about Shakespeare in the podcast intrigues him in understanding the material more. Participant C stated that he remembered clearly additional information from the episode "Why Shakespeare? Why?" the host and the guest speaker were discussing why Shakespeare always makes his characters false dead, just like *Juliet from Romeo and Juliet* and Hero from *Much Ado About Nothing* (personal communication, May 21st, 2021). The student recalled that the host was citing research from Lund (2017) that the Renaissance drama uniquely emphasizes the boundaries between life

and death can be paper-thin, and that characters and actors inhabit worlds of being and not-being. Thus, by knowing this information, the students feel like they gain extra information that they will not get if they were solely asked to read Shakespeare's work.

Fourthly, the study also shows that learning literature through podcasts makes the students interested to explore professions related to literature more.

I am interested to explore professions related with literature (scriptwriter, poet, movie reviewer, director) more deeply when the lecturer use podcast in literature class

45 responses

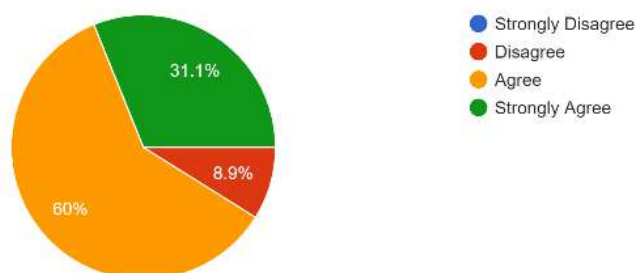

Figure 5. Students' perception whether podcast helps them exploring professions

From the chart above, it can be seen that 91.1% of the participants agree that the podcast increases their curiosity in exploring professions related to literature. As it has mentioned in the research methodology part, the podcast invited guest speakers who are considered as an expert in the literary world, one of which is Johanna Wattimena an acclaimed movie scriptwriter which has been nominated for the 2020 *Piala Maya* for the best-adapted screenplay with *#TemanTapiMenikah 2*. In the podcast, not only Ms. Wattimena explained the theoretical term such as character and characterization but also shared her experiences in writing them and put it into practice. Consequently, the students were intrigued and aspired to become scriptwriter like her.

Describe your overall thought/ opinion regarding your experience learning literature through podcast in 3-5 sentences. State your reason as well. *

My opinion about how to learn using podcasts is new to me, and because of that, my view of the world of literature is broader because existing resource persons are very great people in their fields and share their knowledge in their fields. each is a very amazing thing. In the sense that if there was no podcast, my chances of knowing and finding out about the things that were delivered were very small, for example. I only know a film scriptwriter, I only know a poem, just a paper, and so on. However, from this podcast, I can get further knowledge from the fields they run. Suppose the screenwriter of teman tapi menikah. I never imagined that I would get the chance to find out what happened behind the writing of the film script.

Submitted 5/5/21, 10:41 PM

Figure 6. Sample of students' answer from the questionnaire

From the figure above, it can be seen that one of the participants written how he/she was amazed at how the guest speaker shares her experience in writing a movie script. The student wrote that if there were no podcasts, all information that he/she knew was only written text on papers.

In addition, the students also figured out new professions which they had never knew before that would give many benefits – a professional movie critic.

Yeah, I like to know more about the professional *movie critics*, the speaker told us about his profession, and from there I get a lot of new information about that job. You get free movies, sent to the house. That is cool (Participant F, personal communication, May 21st, 2021).

From the excerpt of the transcript above, it can be seen how Participant F explained further how the insight from the guest speaker triggers the interest. One of the guest speakers, Bavner Donaldo works as a professional movie critic. He is registered as a member of OFCS (Online Film Critics Society) which is the world's oldest organization of online film critics and OFTA (Online Film and Television Association). The speakers shared in the podcast that he received various selections of movies that are sent directly to his house by the famous movie studio, for example, the Oscar winning movie *The Shape of Water* that has been distributed by *Fox Searchlight Pictures*. Many of the students are only accustomed to the movie critics section in online media. Thus, the students not just get information about movie criticism but also the benefit of being a professional movie critic.

As it has been mentioned by Morson (2015), relating to the problem of students' boredom and lack of interest, the first task is to get the student to want to read literature. On the other hand, it is important to fully realize that millennials are individualistic and the self-absorbed prompts them to prioritize their interest (Sharma, 2020). In addition, the GenZ students are highly motivated by engaging with their passions, specifically those to causes they care about. Taking this into account, the writers are fully aware to invite guest speakers that can provoke the students' curiosity. This attempt resulted in high motivation and positive acceptance from the students.

Lastly, despite the positive affirmation from the students, there is an issue that should be noticed by the teacher or lecturer as they apply the usage of the podcast. The podcast is more effective when it is used for intermediate or advanced levels. Several students stated that the challenge of studying literature through the podcast is that they have to have good listening skills because in general the host and the guest speakers are talking in English.

Conclusion

From here it can be concluded that the students have a positive recognition towards the utilization of web podcasts in learning literature. Firstly, 90% of the participants agreed that learning through the podcast is productive. Then, over 80% of the participants stated that the podcast increases motivation in learning literature. In addition, the participants explained that trivia and issues discussed in the podcast evoke their curiosity which makes them interested to follow up the information by themselves. Lastly, the study showed that the podcast helps more than 90% of the participants to see that the literature subject is interesting as they are intrigued to explore professions related to literature study. All in all, the podcast helps them to grasp how the materials they learn in class are related to the experiences of the guest speakers. However, it must be understood that applying podcast also has its downsides, that is: using podcasts is very challenging for students with low competence. Thus, using podcasts in literature studies is more effective when it is used for intermediate or advanced levels.

Lastly, it should be noted that in this study the writers were helped by Indonesian guest speakers in the production of the podcast. Consequently, the guest speakers sometimes still used Indonesian language as they explaining the topic especially when they can't find the

right expression in English. Therefore, as a suggestion for further research, the writers recommend the next researcher invite native guest speakers.

Universitas Teknokrat Indonesia^{1,2,3}

Abstract

Film as a part of literature becomes a medium of expression it's brings to life human imagination and emotion. Movies consist of millions of layered data and also information that are able to shape our view and our perspective in seeing the world. Superhero movies have become the most famous genre and a global phenomenon in the world today. Most of us might remember several names like Superman, Batman, Captain America, Thor, are the major recognizable characters. Cat Woman, Wonder Woman, Captain Marvel are some other names that you may recognize. Even Though there are a lot of Superhero movies where women play lead roles, their presence in leading parts appears to be the start of a movement to reduce portrayal of conventional gender roles. However, by the end of the film, the female protagonist is forced to submit to patriarchal social order's supremacy. This article focuses on the male-dominated capitalist authority of the Hollywood film industry's conscious hypocrisy, which serves as a barrier to achieving gender equality in gender roles, particularly in Superhero films. The article itself, using representation theories from Stuart Hall and Barthes Semiotic to uncover the codes and signs, refers to the issues using superhero movies from DCU and MCU as object materials. The article conducted under the sub-theme of language and gender, with the goal of exposing the Hollywood hypocrisy in proclaiming gender equality while also glorifying masculine dominance.

Keywords: Film analysis, Gender Equality, Hollywood Hypocrisy Male Superiority, Superhero

Introduction

For the past few years, films that bring characters from comic books to life and make them accessible to people who aren't comic book fans have dominated the summer box office. The Avengers from Marvel Studios topped the box office in 2012, followed by the third installment of the Iron Man franchise from Marvel Studios in 2013 and yet another Marvel Studios superhero ensemble film, Guardians of the Galaxy, in 2014. (Image courtesy of Box Office Mojo, N.B.A.) The Avengers sequel, Avengers: Age of Ultron (again, a Marvel Studios production), came in second to Jurassic World at the box office in the summer of 2015. These four comic book adaptations are just the start, and it's clear that studios will continue to develop films based on well-known superhero comic book characters in the near future.

Because a substantial section of the audience is female, the subject of this review, which is the portrayal of female characters in superhero action films (i.e., how they are depicted), is important. Female moviegoers made up 52 percent of moviegoers in the United States and Canada in 2014, according to the Motion Picture Association of America (2015) (hereafter MPAA). Women continue to buy exactly half of all movie tickets, according to the MPAA survey. According to an infographic from the New York Film Academy, women buy

half of all cinema tickets in the United States. (2013, New York Film Academy). According to ComicBook.com, The Avengers had a 40% female audience in theaters (National Women's History Museum n.d.), whereas Guardians of the Galaxy had a 44% female audience (National Women's History Museum n.d.). (2014). Given these figures, which show that women – including younger children – make up nearly half of the audience for these superhero comic book film adaptations, it's critical to pay attention to the images and representations that the films present to their younger and more impressionable audience members, both girls and boys. As King (2006) and Steinke (2005) (as cited by Bogarosh, 2013) point out, the images that Hollywood films circulate give society a “collective sense of what kinds of leaders women make, how women should act and look, what the norm is for femininity, etc.,” often resulting in images that conform to stereotypes.

The "cinematic universe" (or MCU for Marvel's Cinematic Reality) refers to the shared universe in which Marvel's characters live, allowing characters to appear in many Marvel films while also honoring events from earlier films in the same cinematic universe (Siede, 2015). The concept of a cinematic universe, as opposed to a comic book universe, allows for alterations to the original comic book stories when they are adapted for the big screen while still maintaining recognized characters and plot elements. Marvel's utilization of a shared universe in movies was revolutionary, as it had never been done previously to this extent. DC Entertainment, a major rival to Marvel, unveiled their film calendar around the same time in 2014, promising ten new comic book film adaptations set to be released between 2016 and 2020. 2014 (Keyes).

Given the increasing success of these action-adventure comic book film adaptations featuring superhero characters, it is worthwhile to pay attention to the female characters portrayed in these films, given the problematic and stereotypical portrayal of female characters in both comic books and movies. Only one of the five characters in the Guardians of the Galaxy promotional poster is female, indicating that female characters are still a minority in these flicks (while two of the characters are a raccoon and a talking tree). In The Dark Knight Rises, a film based on the DC comic book superhero Batman, just two of the top billing cast members are female (IMDb n.d.). Given the slow but steady growth of films featuring female characters, such as Jennifer Lawrence's Katniss Everdeen in The Hunger Games trilogy and Shailene Woodley's Tris in the Divergent franchise, the figures are troubling and shocking.

Given that the portrayal of female characters in comics and movies has historically been problematic and stereotyped, considering that these film adaptations of action-adventure comics with superhero characters are increasingly successful, it is worth paying attention to the female characters depicted in these movies. In these films, female characters remain a minority, as evidenced by the fact that only one of the five characters on the Guardians of the Galaxy poster is a female (and two of the characters are a raccoon and a talking tree). In the movie "The Dark Knight Rises" adapted from the DC comic book character Batman, only two main actors are female (IMDb nd). These numbers are unsettling and shocking because movies with female leads have slowly and steadily increased, such as Jennifer Lawrence's Katniss Everdeen in "The Hunger Games" and Shailene Woodley's Tris in "Divergent."

The problem now is that the number of male superhero characters dominates the universe, DCU and Marvel. Women have fewer roles than men, they have less power and are more emotional when making decisions. Through this description, female roles are considered less important than male roles and classes with gender equality values. Compared to male characters, female characters are less dominant and female characters are used as additional roles rather than main roles. From the previous background, the author emphasizes that there are still male protagonists in superhero films, which conflicts with the existence of gender equality, especially the existence of female superheroes.

Theory and Method

Hegemonic Masculinity and Femininity

Hegemonic masculinity is always associated with diverse subordinate masculinities and masculinities related to women, according to Connell (Connell, 1987). Hegemonic femininity, like hegemonic masculinity, does not exist among women. Although white, straight, middle-class, and middle-aged masculinity are the dominant types of masculinity in American culture, Connell cautions that hegemony does not imply complete cultural dominance or the elimination of alternative masculinity; rather, hegemony means superiority in the power balance (Connell, 1987).

As a result, alternative forms of masculinity were degraded rather than eradicated. Although hegemonic masculinity is the social ideal of masculinity, most masculine characteristics are not consistent with dominant masculinity (Connell, 1987). In fact, obtaining hegemony often requires the formation of masculinity models, and these people are obviously wonderful existences (Connell, 1987). As a result, hegemonic masculinity has produced an unattainable ideal. Connell (1987) emphasized that femininity is a kind of femininity. Connell (1987) believes that women's general obedience to men is the necessary basis for differentiation. People's interests and desires are met in a certain way, which depends on the realization of this subordinate status.

Connell (1987) However, it is recognized that gender is optional and there are gender differences. For example, other characteristics of femininity are disobedience, methods of resistance, or a combination of obedience, cooperation, and resistance. Conservative masculinity, submissive masculinity, and calculating masculinity exist in the same way. Connell noted that there are "multiple dimensions" and that femininity and masculinity need not be viewed as "opposite extremes of the same dimension" (Connell, 1987).

In addition, Connell noted that there are no physiological characteristics that distinguish masculinity from femininity, and vice versa. Indeed, femininity and masculinity have very similar temperaments, that is, they are "homogeneous temperament characteristics that can be measured in all people" (Connell, 1987). As connections and patterns continue to evolve, it is necessary to check the historical context when assessing masculinity and femininity. As a result, new femininity and masculinity appeared, while the old disappeared. In addition, most men and women do not always support themselves (Connell, 1987).

According to Philippa Gates, the tough guy is a ubiquitous and broad paradigm of America's hegemonic narrative (2006). Tough guy masculinity is linked to macho masculinity, and it takes use of femininity as its polar opposite, particularly the feminine qualities of naivety, dependency, and vulnerability. The tough guy masculinity is ubiquitous in American popular culture heroes, and the toughness tradition in American popular culture is created as hypermasculinity ideals. Mila Bongco (2000) states that while examining a superhero's identity, it is clear that masculinity is a significant factor in establishing and distinguishing an everlasting hero.

Masculinity in superheroes, in particular, displays itself more in how well a superhero uses thought and/or muscle to overcome various power disputes, thereby exhibiting authority and self-sufficiency, and garnering public recognition (Bongco, 2000). Furthermore, according to John Jennings (2013) in *What is a Superhero?* By Robin S. Rosenberg, the ideal superhero body is a cultural object that represents numerous socially and culturally constructed concepts about power, justice, and morality.

The superhero body, as a result, is a physical representation of cultural and social values. However, Gates (2006) argues that the construction of heroes and the toughness tradition are incompatible. In her study of the detective genre, Gates (2006) argues that detective heroes struggle with contradictory demands, particularly between individualism and

society conformity. Heroes must work within the constraints of the law, but they must also assert their independence, which leads to breaching the law. Heroes must be astute enough to outsmart criminals while still proving their toughness by executing violent crimes. According to Gates, toughness is inherited through the body, but it is also possible to obtain toughness – an internal attribute – through body remodeling – an outward characteristic (2006). As a result, it is possible to internalize tough guy masculinity by demonstrating outwardly observable tough guy characteristics like competition and emotional withholding; this relates to Butler's concept of acting gender. Heroes must be astute enough to outsmart criminals while still proving their toughness by executing violent crimes. According to Gates, toughness is inherited through the body, but it is also possible to obtain toughness – an internal attribute – through body remodeling – an outward characteristic (2006). As a result, it is possible to internalize tough guy masculinity by demonstrating outwardly observable tough guy characteristics like competition and emotional withholding; this relates to Butler's concept of acting gender.

Representation in Media

According to Stuart Hall (1997), culture is the production and interchange of meaning among members of a society or group. Cultural participants assign meaning to individuals, objects, and events. We provide meaning to people, objects, and events by the words we use, the images we create, the tales we tell, the ways in which we organize and conceptualize them, the values we assign to them, and the emotions we place on them, according to Hall (1997). Meaning is regarded to be produced – constructed – rather than merely found, according to Hall (1997). As a result, representation is a secondary process, as it appears only after things have been fully constituted and their meaning established. According to Hall (1997), representation can only be properly analyzed in relation to: the actual concrete forms which meaning assumes, in the concrete practices of signifying, reading 'and interpretations; and this necessitates analysis of the actual signs, symbols, figures, images, narratives, words, and sounds – the material forms – in which symbolic meaning is circulated.

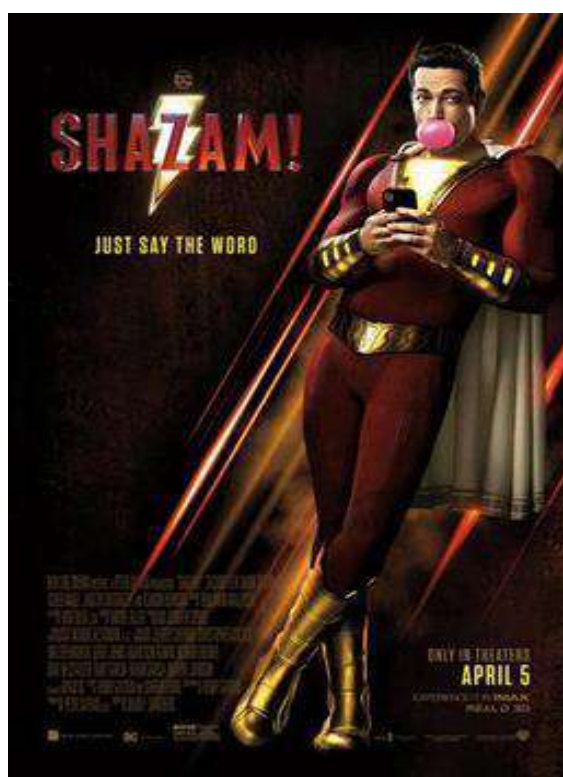

As a result, because the analysis of meaning of physical material forms is interpretative, it can vary over time and there may be several, real meanings. Meanings are inscribed in power relations and are frequently arranged into oppositions or binaries, despite the fact that meaning is not easy. The embodying of concepts, ideas, and emotions in a symbolic form that can be transmitted and meaningfully interpreted is examined in Hall's (1997) concept of "the practices of representation." This concept is important to this research because it examines "the embodying of concepts, ideas, and emotions in a symbolic form that can be transmitted and meaningfully interpreted." In a two-sided and interactive process, both the comic book artist and the reader are active participants. According to Hall (1997), this approach is dialogic because shared cultural conventions and shared knowledge frameworks keep the artist and reader in conversation. The text, immersed within the discourse practice, is at the center of Hall's (1980) theory of encoding and decoding. The discourse practice is influenced by social norms.

Readers who identify with the dominant-hegemonic or favored reading identify with the cultural values given to them through media or text reading. When readers accept the prevalent hegemonic reading but adapt it to fit their own cultural values, they preserve a negotiated reading of the medium or book. An oppositional reading of the media or text occurs when readers completely reject the media or text and establish their own interpretations of the messages being transmitted.

Findings and Discussion

Hypermasculinity in Superhero Movies

The results of hypermasculinity in this genre are very different from what we've seen in other studies. The majority of them paint a troubling picture of non-diverse role models being introduced by male and female characters. Female characters in superhero movie shows, on the other hand, appear to be both driven to action and leaders, as well as having affective, warm personalities, whereas male characters can be extremely violent while also being attentive and emotional. Hypermasculinity is a male-only personality trait in which stereotypically "macho" characteristics are held up as an ideal. Extreme and exaggerated aspects of masculinity, virility, and physicality are displayed by hypermasculine males (Scharrer, 2001). Masculinity is a socially created notion that encompasses a wide range of characteristics including physical strength or power, aggressiveness, risk-taking, and emotional control.

Given this context, the hypermasculine construct in reality lacks the signifiers that give its superhero movies equivalents significance: a guy beating another man does not save the world in the same way that Superman beating up Lex Luthor does. Nonetheless, the symbolism – linked by violence – suggests that such a framework exists: “The objective of hero-worship behavior appears to be to convert a selected individual into an ideal, a persistent symbol of supernormal performance – to capture and establish a norm of the exceptional”

The chiseled physiques of its heroes perform a desire fulfillment role for the largely adolescent superhero movies goobers, and hypermasculinity is a key aspect of this strategy. Its impossibility makes it more attractive, not less so; the absence of separation between worlds - the world of superheroes appearing more real than the real world – doesn't make it any more attainable, but it does give it a tactile quality. This increasing fear of the real world, combined with the perceived security that superhero movies provide, leads to hyperreal influencing perceptions of reality.

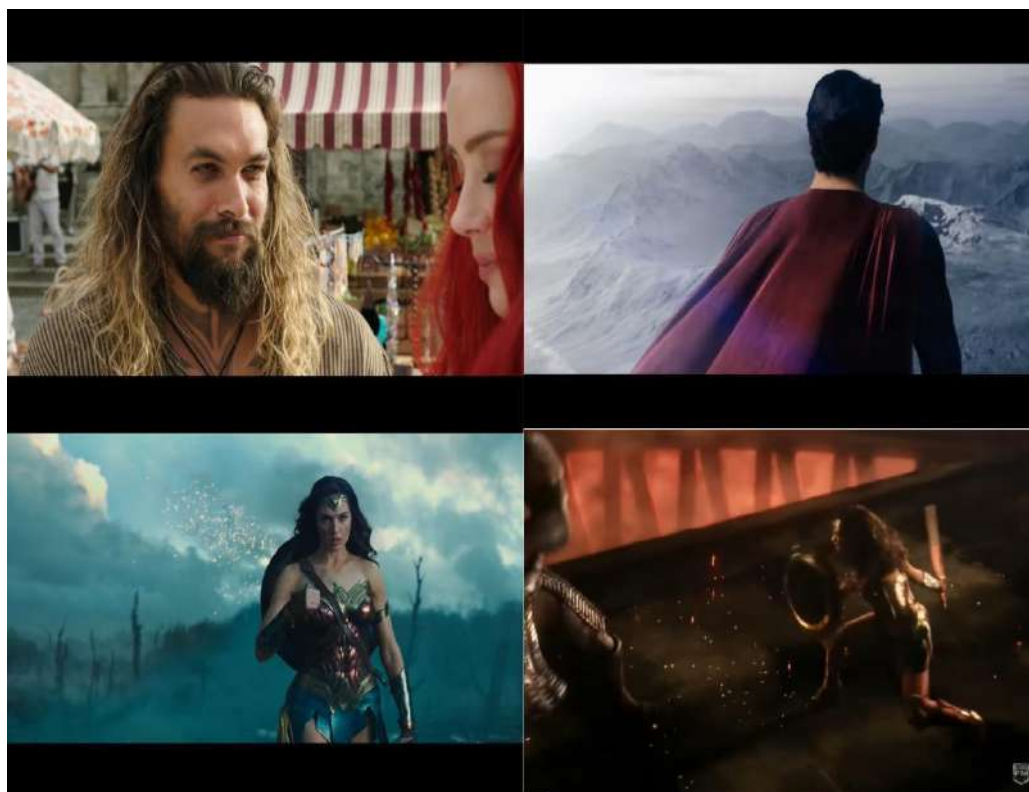

Superheroes would make the world a better place. One of the less appealing characteristics of the hyperreal world of superhero is hypermasculinity. It affirms the need to conform, to compare oneself to an unattainable ideal. Its absence in reality does not soothe either, because it is hyperreal: there is simply a hole in the real world that cannot be fully filled. There is no man who is big enough or strong enough. These real-life men are insufficient, which is why the world cannot be saved as it is in every superhero character. The visual part of hypermasculine ideas is, of course, the most powerful — males towering over women, arms as wide as a surfboard.

Woman Representation in Superhero Movies

Women are more frequently represented in positions valued for their knowledge, power, and independence in later films than in early films, but they are still not as well-rounded or essential as men, according to a study that looked at superhero films from 2002 to 2019. As previously said, these images may be influenced by sexism and patriarchal society, which have been ingrained in society for a long time.

Since 2009, according to the MPAA, women have consistently accounted for a bigger share of moviegoers than men (2014). Despite this, movie companies continue to make films focused at the 18-25 year old white male audience, who is historically regarded as the largest movie-going group (Epstein, 2006). “Action/adventure and fantasy films have come to dominate the US box office (over the previous 20 years) at the expense of character- and narrative-driven films that used to be more popular,” Redfern correctly observed in 2012. This could be due to the fact that these action flicks are hyper-masculine and thus appeal to the target population.

Another interesting finding from the films examined was the difference in representations of female agency in films directed by men and women. Women have substantially less agency, or the potential to act, in films directed by males than in films directed by women, according to qualitative analysis. Women are frequently saved or fail to act in high-stakes situations in male-directed films, and they are frequently manipulated by men. Women in *Spiderman 2* nearly never take action and are usually saved. The film revolves around Spiderman, a superhero, and his desire to defend Mary Jane, his beloved from three villains that are fighting with him. Mary Jane is powerless without her superpowers, and she dies in the movie's plot. While her death serves as the film's instigating incident, her character has little purpose other than to advance the plot. In the film, even female superheroes rarely have agency.

In the film, Shuri, a powerful, independent female heroine, has some agency but only limited into how she helps Black Panther safety in the battle field.. Her "superpower," on the other hand, is merely that she is lucky, which limits her ability to directly act in the film. Whether or whether this is a deliberate element, it represents the lack of agency women have in the film. Furthermore, the bulk of characters with superpowers in the films studied are men, making the characters with the most autonomy male. While some strong female characters exist, they rarely possess the same godlike abilities as their male counterparts. Characters such as Black Widow, Gamora, and Nebula do not have the same "superhero" abilities as men (Russo & Russo, 2018).

The men are always the ones who show actual, uncontrollable strength in these pictures. Women rarely, if ever, undertake deeds such as Thanos' snap, which wipes out half of the universe's life, or Thor's key rampage in the climactic battle scene, in which he wields a famous weapon that can control thunder and lightning (Russo & Russo, 2018). The men are always the ones who show actual, uncontrollable strength in these pictures. Women rarely, if ever, undertake deeds such as Thanos' snap, which wipes out half of the universe's life, or Thor's key rampage in the climactic battle scene, in which he wields a famous weapon that can control thunder and lightning (Russo & Russo, 2018). Even in a film like Black Panther, where female characters have agency, men, especially the king of the imaginary country Wakanda and his nemesis and challenger to the throne, are the only characters with traditional skills (Coogler, 2018). Female characters in many prominent male-directed live action films lack these qualities, which is a notable example of their lack of autonomy.

Woman Roles in Superhero Movies

In superhero movies, we see more female characters in action and leading roles than in any other genre. Once again, the shows developed by a female creator or one with a wide set of interests are the ones that raise those percentages. But now is the time to analyze why female writers are better able to develop strong female characters as well as realistic and sympathetic male characters. It's critical that women who have been hypersexualized in humiliating ways for years, and who are cast in positions that don't add anything to the wider story, get not only more, but also more appropriate representation.

The gender role structure that has formed the foundation of American culture for decades has played a big effect in how these women are portrayed in comic books and how they have grown via film. With the rise of feminism in the twentieth century came initiatives to widen gender boundaries. Feminist criticism is based on the aim to question gender and racial norms, effectively undermining the white male population's predominance in the United States. Some guys not only play the traditional male role in society efficiently, but they also force traditional gender roles on people around them. Even in the twenty-first century, males are unconsciously taught that they must continually prove their masculinity to

the public through numerous types of media and pop culture. Some even go so far as to use male characteristics to gain dominance over others in order to appear superior. This provides the message that it is not only okay for males to act in this manner, but also necessary for them to demonstrate their masculinity at all times. How masculine and feminine gender clichés are represented in heroes on screen is heavily influenced by how Americans have traditionally and culturally interpreted and adopted gender roles.

Wonder Woman (2017) was a highly anticipated release in early summer 2017, directed by Patty Jenkins and written by Zack Snyder and Allan Heinberg. Wonder Woman is the first female-led DC or Marvel superhero film to not bomb at the box office in the last two decades. Having a woman direct this film, the first cinematic appearance of Wonder Woman in the twenty-first century, has “become a rallying call for women everywhere.”

Wonder Woman feels she can defeat Ares on her own, and she is capable of a lot of things on her own, but in the end, she needs Steve and her love for him to defeat Ares. Diana comes to grips with her misunderstandings about humanity at the film's conclusion. In the eyes of men, she has changed. She was naive, idealistic, and innocent when she first arrived, but following her adventures, she has grown into a more worldly hero. She recognizes that war has the potential to corrupt all people, but her bond with Steve allows her to see the potential good in humanity and yet feel compelled to fight on their behalf, despite all the "darkness that lies in between the light" (Wonder Woman).

Steve, on the other hand, has more power over Diana than it appears, not because he is merely a vehicle for furthering Diana's story, but because he provides the way for the film's central conflict to be resolved. In addition, Justice League (2017) implies that Steve's death has had a long-term impact on Diana's leadership abilities. Diana remains one of the only female main characters in the film, and she is the only other female with superpowers. What's more significant is that her personality hasn't changed.

Conclusion

The movie industry has set its foot in giving many representations towards issues. Women as one of the issues are already portrayed as noble in the realm of superheroes. however, the representation of hypermasculinity is still longing within the movie industry. seeing a lot of heroes like Superman, & Captain America is the giant proof that superheroes need to be muscular, and have superhuman abilities. Therefore, even if there are already female superheroes exist in the Hollywood, the male superheroes are and still dominated the whole industry with their characteristics and made the representations of female superheroes minimal.

The idea of female representatives in the media is not a limited topic, and the evolution of media is continuous, and research should be the same. In particular, all forms of television and its script series can be responsible for the personality development of the audience. According to self-cultivation theory, our view of the world is influenced by popular TV media information. "For most people with standardized roles and behaviors, television is a means of socialization. In a word, its function is culturalization" (Gerbner and Gross, 1986).

Take the Superhero movies existed in status quo as examples. We have already mentioned the differences between these characters and the male characters, and how to liberate themselves from the gender concept. The female characters in the superhero TV series seem to follow this example completely and present a more realistic image for women. Not everyone is as active as Wonder Woman or Captain Marvel. Of course, the drama necessary to maintain a few months of TV interest cannot keep their mental state from being broken. However, many female characters of the superhero type. In the TV series, they are first multi-dimensional people without dichotomy, and then women. On the contrary, male characters are more controlled by their masculinity.

The Chronicles of Blame Culture in Digital Populism in Indonesia

Pradipto Bhagaskoro¹, Rommel Utungga Pasopati²

bhagas.jp@gmail.com¹ rommelpasopati@yahoo.com²

Independent Researcher¹

Dr. Soetomo University Surabaya²

Abstract

Netizenship is a new form of citizenship made possible by the development of social media. In certain circumstances, netizenship may be evoked into digital populism which tends to divide public opinion. The opinion divided in digital populism often involves each party playing victim while accusing other party conspiring for their own interests. As stated in blame culture, to blame others remain necessary in defining identities of self and others. If so, how may blame culture reflect digital populism in Indonesia? This paper is stated in qualitative method by asserting written data. Conditions of digital realm, blame culture, and digital populism are explored to answer that question. It seems that the problem is related to dualism of differences rather than duality of diversities. Netizenship today tends to shape identities not by strengthening own matters, but by revealing others' weakness and fault. However, this condition is unnecessary for digital education, but it is inevitable due to unlimited flowing of information today. In conclusion, blame culture is how netizens shape their identities in digital populism. Digital sphere is never such free-value, but it is always power-related as it may associate with identities of human beings.

Keywords: blame culture, digital populism, digital realm, identity

Introduction

In relatively neutral understanding, digital populism is widely defined as rising active denying and supporting to such social and political issues in the internet realm. Those who join these actions are so abundant in numbers, including not only partisan members but also common people. As long as internet-based gadgets are available for people, they could comment, share, or even make such issues related to interests of the people. This condition of digital populism shape such awareness to recent information among netizens. People are more encouraged, or even provoked, to be more active in digital realm. By becoming actively involved, people understand more about public affairs, and at the same time define themselves as the supporting ones, the opposing ones, or even the absent ones.

However, digital populism reflects such crucial differences among those three sections above. Each of section do not really befriend to each other, as each will attack and defend their ideas as seen in socio-political contestations. One interesting point is that each section may blame each other according to each own perspective (Lupton and Warren, 2016). This action has been such habit in Indonesian netizens in digital realm. The habit of blaming has become blame culture, the focal point of keeping own standpoint by accusing, arraigning, or even depreciating others. If so, how may blame culture reflect digital populism in Indonesia? This paper is stated in qualitative method by asserting written data. Conditions of digital realm, blame culture, and digital populism are explored to answer that question. It seems that the problem is related to dualism of differences rather than duality of diversities.

Method

By using qualitative method, certain concepts and written data are analyzed to answer the question in this paper. Online and offline scripts are used to explain correlations between blame culture and digital populism in Indonesia. Online and offline scripts are derived from books and journals to understand shown matters. The data analysis include attaining sources, reading sources carefully, comparing with other issues, quoting into paper, and writing down in references lists.

Findings and Discussions

Condition of Digital Populism in Indonesia

Before we get into digital populism, it is important to agree on the concept of populism discussed in this paper. The conception used in this paper is populism as a folkloric style of politics, which is carried out by political parties and leaders to gather their supporters. This kind of populist politics relies on the separation between the people and their "enemy", whether it is categorized as corrupt elite or failed ruling class. Political opponents are antagonized and considered enemies of the people, in order to gain populist support. Recently, the populist approach has often been demonstrated by eccentric attitude and uncommon political behavior, to maximize and exploit media attention, and from it also popular support (Mudde and Kaltwasser, 2017: 5-6).

Since the New Order, populism has actually become a blueprint in Indonesian politics. Since Suharto's leadership, ideology is no longer a discourse that must be contested in the public interest. The ideological contestation was abolished by Suharto by using Pancasila, a nation's perspective which he treated as the single and absolute ideology of the nation. In the absence of ideological struggles, populism becomes the only way to gain power. Suharto himself wrested power from Sukarno by building his own popular support. In the years leading up to Suharto's downfall, Megawati Sukarnoputri, who at that time experienced sabotage in her election as chairman of the Indonesian Democratic Party, also once considered a populist leader. Her image as a politician who was the victim of the Suharto regime's intervention increased her reputation and popularity, although it took a long time, almost a decade, for her to come to power. With a similar pattern, Susilo Bambang Yudhoyono had used populism, using the narrative as a minister who became a victim of the Megawati regime. With his ability to capitalize on populism, he was able to quickly build and grow the Democratic Party and win the election with an astonishing number of votes. The last populism survives today. In the 2014 election, there were two populist politics at the same time. Joko Widodo's populism is built on the narrative of a populist civilian leader, against Prabowo's populism which describes himself as a former strong and nationalist military leader. The 2014 election occurred during the social media boom, and it seems that during this period the existence of digital populism began to be widely recognized.

During that latest period, there were at least three social media that were widely used by Indonesian netizens, namely Twitter, Facebook, and Instagram. Like what has become a global phenomenon, the social media boom was followed by waves of social media activism. Indonesians who during the Suharto regime were unable to express their views freely are now able to do so through various means on social media. This expression, of course, includes political expression, in the form of support for causes and individuals. This new, fresh, political activism on social media was used by both parties who contested the 2014 election as a means to win. Through social media, both of them used various ways to win the election. Starting from building buzzwords to show dominance to creating thousands of bot accounts to manipulate discourse and information.

This new, fresh, political activism on social media is used by both parties who are contesting as a tool to win the election. Through social media, both of them used various ways to win the election. There are many things that both sides do with social media: from financing cyber armies, organizing buzzwords to boost popularity, and creating thousands of bot accounts to manipulate public opinion, to name a few. Also in 2014, new social media figures emerged, providing opinions and information that netizens referred to. These figures are what we often refer to as Key Opinion Leaders (KOL), social media influencers, or in the context of Indonesian politics, often called political buzzers. Even when the 2014 election ended, social media continued to become battleground for political buzzers from both sides. The commotion caused by these buzzers was expanded by netizens supporting each candidate. Through campaign methods that were concentrated on social media at the time, it had formed a wave of "digital activism" among netizens who became fanatical sympathizers of political figures. This form of digital militancy is later referred to as digital populism.

Digital populism that was formed in 2014 has caused the public to be tormented by unhealthy polarization. This polarization has been exacerbated by religious fanaticism, hoaxes, and misinformation, and—though to a lesser extent—continues to this day. The use of political buzzers even continues after the election is over, manipulates public opinion to polish the image of the government or its policies, or to undermine important issues that are considered a threat to the image of the ruling regime. With their prominent and significant role as sympathizers of the ruling class, and having to participate in opinion races with various parties, it is difficult for these influencers to avoid the trap of misinformation or even hoaxes. Their significance to lead netizens' opinion has now been deemed excessive and unsettling by some people. This feeling of annoyance is expressed by the public, for example, through an anecdotal predicate "buzzeRp" (a combination of the word "buzzer" and the Indonesian currency, Rupiah) to these key opinion leaders who support the ruling regime. Combined with the militancy of their fanatical followers, influencers seem to have functioned more effectively than the Government's own communications bureau.

Indonesian society is also seen as the most active community using social media. In January 2021, marketing agencies We Are Social and Hootsuite reported that around 61.8% of Indonesia's population are active users of social media. This means that from a total of 274.9 million people, there are at least 170 million people who use social media actively. This report also states that every day they spend an average of 3 hours 14 minutes accessing social media (tekno.kompas.com, 2021). Having a very large number of active social media users is an opportunity for the Indonesian government to exploit. Indonesian Corruption Watch (ICW) stated that the Indonesian government allegedly provided nearly USD 6 million for influencer services with the aim of shaping public opinion (cnnindonesia.com, 2020). In the early days of the pandemic, Airlangga Hartanto, the Coordinating Minister for the Economy, even planned to budget at least USD 5 million to promote the tourism sector suffering from the impact of the pandemic, through digital spaces, one of which is the use of social media influencers (tirto.id, 2020).

The problem is, digital populism takes advantage of social media and technological developments with its fast-paced momentum. Intense participation in social media requires everything to be instant, including the thought process. This situation causes the portion of low information to be very dominant than high information. Low information seems to be the general characteristic of social media information, which is instantaneous in nature, thus also making it more preferred by the general public; it is often anecdotal, trivial, and easily spread by influencers in the form of text, audio-visual, or even memes. The instantaneous nature of social media shortens netizens' time to process thoughts, which is always patterned by the cycle of 'watch-react-share' activity. The less time available for the thought process, the more difficult it is to do in-depth thinking.

On the one hand, information is easily accessible, but only low quality information is successfully absorbed by the public, circulated and reproduced as a discourse that develops into public knowledge. Meanwhile, high quality information that require disciplined examination and thorough research is considered part of elitist propaganda and are too complicated for ordinary people. Basically, the quality of information can be viewed in an objective and subjective way. High quality information must at least contain elements of accuracy, reliability, validity, comprehensiveness, currency, credibility, expertise, trust, thoroughness, transparency, and an awareness of the information bias itself (Diakopoulos & Essa 2008).

Unfortunately, the militancy of Indonesian netizens in social media is not followed by a better quality of education. The poor quality of education implicates the inability to process critical thinking. With this condition, accessibility to various in-depth information becomes meaningless, because netizens are more interested in the instant nature of low quality information, no matter how large the amount of high quality information that can be accessed. With this low critical thinking skills and the wildly spread of low quality information as a source of mainstream knowledge, it's actually not much that can be expected. With the neglect of high quality information based on data, theory, and the use of responsible logic, healthy discussions are difficult to expect. The end of this condition is an increase in superficial negative reactions, often indicated by the intention of blaming without any substantial information. Recently, this instant expression that takes the form of a negative reaction has created a trend towards the practice of social media known as blame culture.

Rising Blame Culture in Netizenship

To blame is a natural doing of human beings. Everyone must have ever done blaming to others outside of him or herself. Somehow, it is not as easy as saying that blaming is about saying bad things about others (Skarlicki, et. al., 2017). It may be a one-sided action, but the meaning inside is absolutely more complicated than that. There are some probabilities about blaming that comes from interactions between each side. First, blaming others does not mean that the blamed ones are wrong. Indeed, blaming is to accuse others in having wrongdoing. However, blaming could be stated as passing mistakes to others in case to avoid responsibility. Someone do not want to be blamed, then he or she blames others. It is accountability that matters here (Skarlicki, et. al., 2017). Second, it is still vary which side is the subject and the object. Normally, someone who blames others remain as subject while the blamed one is the object. Somehow, the subject could be an object too in other conditions. As people are indicated with diverse identities at the same time, those who blame could be blamed for another doings in different aspect. There is no monolithic perspective in blaming, even it is stated as one-sided action, different identities of a person enable him or her to be blamed either. Third, culturally, it is no longer enough to say that blaming is about victimization of others. Even the victims could accuse others to be the doers and it is a blaming too (Coates and Tognazzini, 2013). It could be emphasized in a sentence; "Do not blame me if I have to do something bad to you since you disturbed me first". That sentence is the today's condition of society where someone could be both the victim and the doer altogether. Blaming is so complicated that may involve ambiguity and overlapping concepts of being positive and negative. Someone who blames could be a victim too in another way. There is no full concept of being a doer and a victim in blaming. Each may correlate to another and could be in reverse situation either.

In Indonesia, citizenship moves massively towards netizenship in the era of online realm compared to real world. People live more various identities today (Scambler, 2020) as they embrace being citizens and netizens as well. The doings are vary too, it could be continuation, total separation, or even partly mixing from real to virtual one. The aspects are

flourished either since virtual ideas have touched every single part of human beings. Indeed, online realm reflects more chances for people to move, but the condition is not neutral at all. It is since the netizens are real people and not robots. The realm has been colored with contestation of values where people could provide facts, support opinions, deny assumptions, and even spread hoaxes.

This paper would emphasize only to perspectives of blame involving people's reactions to such public issues. The writers avoid to speak about blame in private aspects or in business conditions, but some points may be reflected from those points too. It is because of diversity of identities in matters of cultural aspects. Each person could not do a single deed without any reason at all (Scambler, 2020). Each action enables conditions of cause and effect factors which involve complicated interactions between subjects and objects in interactions.

Politics indeed have been critical points today. A side would like to keep the power while other side tries to criticize it every time. Involving abundant perspectives also color the contestations. Politics that may come to such public policies then must include social and economic aspects (Scambler, 2020). Religions, health, educations, culture, tourism, all of those are examples of public issues among others that have been topics of everyday life. Then, the contestation also expand to blaming others. The classic blame shows a side accuses those who are in power to be more responsible to the people (Skarlicki, et. al., 2017). Any public policy should be defended by law enforcement so that it could reach people as the main target. While those with power also blame the former side by saying that any criticism is never enough to solve a problem. Criticism must come alongside with solutions so that it could be practically applied. At this point, blaming could be a positive idea to be realized. It moves from arguments to arguments altogether with data and facts to support the ideas (Scambler, 2020). The dialogue becomes so healthy that blaming is such appreciation in former actions and criticism to be better in the latter.

However, actions and reactions from netizens in online realm especially social media are not that healthy. Blaming is sometimes purely accusing, saying bad things to others, and even demonizing other parties for doing wrong. Blaming becomes so negative (Coates and Tognazzini, 2013) and out of educational points at all. Moreover, it has become such culture among netizens in Indonesia. There are some points that show realities of blame culture among citizens in Indonesia. First, the criticisms are not made as an arguments, but more like badmouthing others. If someone is wrong then that doing is absolute and unforgivable. Blaming has overshadows rationality into merely total accuse to others (Scanlon, 2008). Second, emotions do often come altogether with opinions. The blame then is more like anger than criticism. It is true that those who criticize may really feel the impact of bad policy. But then more people keep supporting that and it becomes more like following the trends rather than focusing on the essence of the doing itself. It has been such framing that comes along with blaming itself (Resodihardjo, 2020). Third, blaming is reflection of mere stigmatization of others. It happens both to the side of the supporters and the deniers. It becomes matter of morals since both sides become absolute towards others (Coates and Tognazzini, 2013). Anything that is not in line with own agenda must be stated as wrong even though the arguments may be true. It applies to the contrary too; anything that is involved in own circle must be protected even if they may do wrong. Blame culture than is not only about culture of accusing others, but also a worsened one that is being hostile to differences. Blaming then is similar to being ignorant to others since it is done so blindly without considering other perspectives (Resodihardjo, 2020).

As said above, blame culture is not good for educational purpose of behaving in online realm. Accusing others have worsened into polarization between us and others. Chances of abundant possibilities in online realm has been exploited to inflate blame that

tends to be destructive rather than constructive. Even the debates go nowhere besides throwing blames from each party toward another party. Others must remain out of league and even be total victim as merely objects (Coates and Tognazzini, 2013). Blame culture's logic has failed to interpret premises so that the conclusion is fallen as well. In logic, it is related to logical fallacies. Blaming's logic is not totally lost or deviant, but there is disconnectedness between premises and conclusions (Scanlon, 2008). In other words, the process of logic is out of context that is usually overshadowed by specific interest.

It may be true that everyone must have ever done any logical fallacy, but the worsened conditions of blame culture today could not be accepted easily either. There are some logical fallacies that could really be used to understand situations of blame culture among netizens in Indonesia. The writers only use six concepts of fallacies instead of twelve of all of them. First, someone concludes too early about something and make it presume the action to be wrong generally. It is hasty generalization. It is lost in data and facts, somehow it comes to conclusion which is lost too. Only some could not represent the whole (Scanlon, 2008). For example, saying that government is bad by comparing bad policy in education results the same with bad policy in foreign matters. That is too general conclusion and somehow those two points are not comparable. Second, it is called red herring that any misfortune could not be reason to fully blame people. Some people would like to argue by exaggerating events which is irrelevant and somehow they try to avoid building better arguments. For example, some people accuse that bad government provoke natural disasters such as earthquake. The government could be blamed for not doing good handling of situation post-disaster, but not for the cause. Third, slippery slope that overthinks an event that has not happened yet. This fallacy inflate imaginations to its worst outcome and make the other parties to understand it. For example, there is assumption that if a party came to power, some people could no longer practice religions anymore. The logics is too extreme to be imagined, as somehow law will still protect diversities among people.

Fourth, some arguments appeal to emotions of other parties rather than present facts. At this point politics of identities are commonly used to wake awareness of a community being hurt. Instead of building logical arguments, this argument choose to play as victims to shape common ideas. For example, criminalization of religious leaders or *ulama* has been widely used to argue why this government is wrong. If the religious leaders do something wrong then it is meant as criminalization rather than shaping other arguments to oppose that accuse. Fifth, some people argue that there are only two main outcomes which is supporting or destroying things. This statement is about oversimplifying; it seems so simple but ignores abundant alternatives that may come (Resodihardjo, 2020). For example, some young people will be really angry if their idols are ignored or said as bad. They will attack those who criticize their idols by saying bad words. They only think two aspects of fandom; either you are supporting us or destroying us. Somehow, many people do not really understand that specific world at all and could not be categorized into those two mere outcomes. Sixth, this is the most common fallacy that is called as *ad hominem*. People do not argue about the doings or the sayings done, but they attack personal attributes. The qualities are undermined by appearance and origins in this fallacy. For example, someone is to blame for taking bad policy because he or she is fat. Someone is accused for stealing because he or she is from certain races. This is quite like bullying from body shaming to racism even sometimes it relates to sexism too.

From those points above, blame culture exists because of exaggerating points in accusing people (Lupton and Warren, 2016). Blaming becomes staple food in everyday life. However, the blaming does not contain good logic of arguments. Some people are just following the trends while others are having hobby of saying bad things to others. While good debates should be based on wider solid arguments, people choose to narrow logics into

attacking identities. What is important is blaming by not proposing something good. Those who blame today only stop in blaming without thinking or even doing what is better for the future. They only think that he or she must be wrong, period, and that is all (Lupton and Warren, 2016).

Reflection of Blame Culture in Digital Populism

Condition of blame culture in digital populism in Indonesia is full of radical dualism rather than appropriate duality. While duality really appreciates differences and understand diversity of identities, dualism put how an agenda is always on a higher level than the former (Resodihardjo, 2020). At this point, those who blame always position themselves as better than any other. Even though in some events they are meant as a victim, but that is more like playing to be one. It could be seen in how they build arguments as the process between premises and conclusions. They do not provide the facts too, but flattered facts which contain logical fallacies as well. They blame since as they convey emotional negativity (Skarlicki, et. al., 2017).

Of course, not everyone in online realm have the same assumptions in having blame culture. Even many of them give wide and better information about appreciation to wide diversities. Somehow, those points are quite normative since it is merely like continuations from real world to online one. There are nothing different about the contents between those two worlds except the appearances are not the same. This is one reason why blame culture is blooming so well in digital realm. Those good values are not wrong, but still those leave such holes and gaps of assumptions that were filled with blame culture. Those who do blame culture no longer believe in other values except theirs (Lupton and Warren, 2016). That absolute belief in blaming makes them tough even though they know that their belief is so minor and fragile at the same time. They may look so strong that populism always come with enormous amount of people, but they do not really fit to wider society. They may be unique, but how they promote in being different is out of any sense.

That specific blame culture is how online condition is full of hate. It is separated from arguments through criticism. Yet it is so different being evaluative and punitive as well (Scanlon, 2008). The opinion divided in digital populism often involves each party playing victim while accusing other party conspiring for their own interests. As stated in blame culture, to blame others remain necessary in defining identities of self and others. Those who blame do that action because they have specific agenda to be realized either to protect or to destroy others. They will not consider whom they attack by words. Even most of them will use any kind of means to support their doings. For example, when a popular public policy is released, actually they know that the policy is prone to be criticized. Therefore both confronting sides are ready to defend and attack. They do not think twice to exploit other related aspects. Logical fallacies are familiarly used to blame others. Sometimes, it looks too cynical or irrational, but many people believe that arguments too (Scanlon, 2008). Even if they are not ready to have a complete information, they will defend the agenda bravely by blaming the criticism. Meanwhile, those who attack will use abundant aspects to blame the agenda made by other parties. The tension will never end, but will only color online realm with hate more and more. Blaming others is not ethical at all. Then, blame culture in online realm is unethical too.

It seems that the problem is related to dualism of differences rather than duality of diversities. Netizenship today tends to shape identities not by strengthening own matters, but by revealing others' weakness and fault. However, this condition is unnecessary for digital education, but it is inevitable due to unlimited flowing of information today. Philosophically, blaming will always exist but it should not be worsened even more (Lupton and Warren, 2016). On online condition, blame culture is how netizens shape their identities in digital

populism. Digital sphere is never such free-value, but it is always power-related as it may associate with identities of human beings. Populism is only a way to complicate the polarizations by colliding two or more big amount of people in supporting or criticizing agendas. The contents are still the same; out of league of ideologies, but getting involved in complying with politic of identities.

Blame culture emerged along with the scarcity of socio-political discourse circulating in the community. Social and/or political arguments have not developed since Pancasila is positioned as a single ideology for the nation. In this condition, Pancasila—which is a dialectical process between nationalism, religion, and socialism—has lost its dynamics, experiencing stagnation that creates a dialectical failure against the ever-changing era.

Especially since the interpretation of Pancasila has been monopolized by the State, the discourse on Pancasila among the people has stagnated. This means that most people are no longer able to grasp the idealization of Pancasila as an answer to the problems of their daily lives. Pancasila failed to become the basis of the argument of the people who tried to understand and defend their rights. Especially in today's era of instant social media, the interpretation of Pancasila—rather than becoming a developing discourse in society—has been considered too complicated, equivalent to high quality information which is assumed to be consumed only by the elite. With this sentiment, people fail to understand, and ignore knowledge of other social/political discourses, both those that helped shape Pancasila and those outside of it. This tendency turns into a snowball of ignorance that makes people reluctant to try to understand everything before arguing. Meanwhile, the need to argue is a condition of self-existence in social media. Unfortunately, self-existence in social media requires speed to provide content (or arguments) more than the substance itself. In the absence of sufficient time to understand the real issues and problems, there is not enough provision for arguments. From here, blame culture emerged as a suitable solution.

Although high quality information is not inaccessible, only a few people have the will and capacity to access it. One reason is that access to higher education is increasingly expensive, making science and the arguments based on it appear elitist and unaffordable—financially and cognitively—for ordinary people. This sentiment is also exacerbated by the spread of propaganda by the ruling regime on social media, both by government bureaus and influencers, increasing the dominance of low quality information among Indonesian netizens. The spread of propaganda in the form of low quality information needs to be seen as an effort to maintain populist politics that has been formed since 2014 through digital populism.

The government and the regime that drives it should be able to provide adequate education to develop the cognitive development of its people, and for that purpose, the role of influencers and political buzzers should be excluded from the chessboard. Information from the government should be conveyed through official channels, in the form of high quality information with guaranteed integrity, and easily accessible to the people. What is happening now is, for the sake of legitimacy and popularity, and also to avoid criticism directed at a leader figure, in the end the public's cognitive side must be sacrificed, allowing them to be ignorant and hatefully argue with each other without adequate substance in their arguments.

Conclusion

Blame culture exists in digital world of Indonesia related to polarization among parties. Each party have such agenda to keep power or to reach more power. The party then collect more people to defend own or to attack others by doing blaming. Indeed, it is unethical but it comes without no reason. Indonesian history about populism especially politics have expanded and continued into online conditions. The opinion divided in digital populism often involves each party playing victim while accusing other party conspiring for their own interests. As stated in blame culture, to blame others remain necessary in defining

identities of self and others. Blame culture is how netizens shape their identities in digital populism. Digital sphere is never such free-value, but it is always power-related as it may associate with identities of human beings. Populism is only a way to complicate the polarizations by colliding two or more big amount of people in supporting or criticizing agendas. The contents are still the same; out of league of ideologies, but getting involved in complying with politic of identities.

Abstract

Nathaniel Hawthorne's *The Birthmark* is a short story in which a husband is anxious about his wife's appearance due to her birthmark on cheek. He makes a liquid to get rid of it so that she could be prettier. She drinks it and the birthmark is gone, but she died, as disappearing birthmark means fading of her life. The emergence of video-sharing applications such as TikTok and Snack Video shows perfectness of scenes and bodies performed by content makers and supported by viewers. Performers must exemplify perfect appearances and if they are unconfident, many visual effects may be chosen to improve their looks. The story and the applications reflect phantasm of perfectness; perfect but unreal. Then, how is phantasm of perfectness of sharing video applications portrayed in Nathaniel Hawthorne's *The Birthmark*? By using qualitative method, written data, concepts, and theories are asserted to answer that question. In Hawthorne's story and video-sharing applications, both demand faultless beyond reality of imperfections. The wife and the videos must be flawless for the viewers although those are never real at all. It blurs borders between reality and fantasy by accentuating demands from viewers. Imperfections must be transformed into perfectness, yet appearance may change but its essences stay in reality.

Keywords: Nathaniel Hawthorne, phantasm of perfectness, *The Birthmark*, TikTok, Video-Sharing Applications

Introduction

The Birthmark is a famous short story by Nathaniel Hawthorne. Written in 1840s, this old story tells about how perfection is actually out of human sense and trying to reach it is such denial to human life (Hawthorne, 2017). A scientist named Aylmer is obsessed with his wife's birthmark on her cheek. Aylmer then makes a liquid to get rid of it so that his wife, Georgiana, could be prettier. She drinks it and the birthmark is gone, but she died, as disappearing birthmark means fading of her life (Hawthorne, 2017). On the other hand, popular video-sharing applications such as TikTok and Snack Video show how perfections are glorified. Perfectness of scenes and bodies performed by content makers and supported by viewers. Performers must exemplify perfect appearances and if they are unconfident, many visual effects may be chosen to improve their looks. The story and the applications reflect phantasm of perfectness; perfect but unreal. Then, how is phantasm of perfectness of sharing video applications portrayed in Nathaniel Hawthorne's *The Birthmark*? By using qualitative method, written data, concepts, and theories are asserted to answer that question. In Hawthorne's story and video-sharing applications, both demand faultless beyond reality of imperfections. The wife and the videos must be flawless for the husband and the viewers although those are never real at all.

Theory and Method

By using qualitative method, certain concepts and written data are analyzed to answer the question in this paper. Online and offline scripts are used to explain analysis of phantasm of perfectness between *The Birthmark* story by Nathaniel Hawthorne and today's video-sharing applications. Online and offline scripts are derived from books and journals to understand shown matters. The data analysis include attaining sources, reading sources carefully, comparing with other issues, quoting into paper, and writing down in references lists.

Findings and Discussions

Chronicles of a Short Story: *The Birthmark*

The story consists of three main plots that reflects how characters interact, correlate, and also correspond to the settings. The first plot is about the birthmark itself and Aylmer's obsession to it. He demands such perfectness for Georgiana so that they could love each other more. The birthmark is considered by him as an imperfection (Sudha, 2018). He states it as a defect, a thing that shocks him and makes his wife less beautiful. He becomes obsessed with it. He does not want it, since he hates it, and it becomes pain for him. He wants to get rid of it. He thinks about it deeply, and with his scientific knowledge, he believes that he could eliminate it so that her wife's beauty could reach such standard (Bozarth, 2018). Meanwhile, Georgiana thinks her birthmark is such a charm, a gift one could imagine. She is shocked when her husband wants to omit it. She gets deeply hurt and being affected by Aylmer's obsession. She tries to be a good wife for him but he still rejects the essential part of her body. Sadly, Georgiana begins to fear her own look. She becomes pale as she thinks about the birthmark deeply in her heart. She becomes a victim of her own misperception from her husband (Christensen, 2015).

That plot indicates that Aylmer is anxious about Georgiana's birthmark. That anxiety is built from his thinking that love must be perfect. Since then, who is loved must be perfect too and it is such obligation for lover to make the couple perfect too. It could be said too that Aylmer loves perfection. The birthmark is the main source of his anxiety. Each defect must be eliminated by any means, including his wife herself (Sudha, 2018; Bozarth, 2018). He then becomes greedy, he does not really care about what Georgiana has done for him. Her birthmark has become the ultimate one in his eyes. His thought of the mark on the left cheek of his wife has undermined his truly love to her. He wants more than the true Georgiana. He demands more than the truth, he craves perfectness. He even does not apologize to Georgiana when he hurts her about her mark. He has made Georgiana as an object of his gaze of perception (Christensen, 2015; Mehdi, 2014). She is not considered as his wife who loves him, but she is the source of imperfection in his life. Being an object, the wife has become only as a thing for the husband. From Georgiana side, she believes Aylmer so much. She hates being an object for him, but she wants to make him happier than ever. At first, she is hurt but then she could accept her husband's thought of her and her mark even if those were such violence to herself (Bozarth, 2018). However, that acceptance is not normal at all. It leaves her a pale face. She is separated from her body since she rejects her body too. She chooses her husband rather than her own body.

The second plot reflects Georgiana's approval to her husband's idea to remove the birthmark. She even reminds him about his dream. She accepts her condition as the object for him (Mehdi, 2014). At first, she believes that her birthmark is hers, but then as she is Aylmer's wife, then she belongs to her husband. She knows that removing the mark may damage her health, but her thinking of the mark that being hateful has been such ultimate perspective for her (Yu, 2010). On the side of Aylmer, he is sad about his dream that doing

experiment of the birthmark. The operation is so deep that his knife is going into Georgiana's heart. However, his wife's approval has made him happy. He convinces her that he will remove the mark. He is so confident about his own ability in science. He then begins to prepare the operation for her.

The above plot shows that Georgiana has given up power upon her own body. She gives it totally to her husband. She does not care about her sadness as she ignores her own anxiety. Logically, she should reject her husband's thought about the mark, but she fully accepts it, even if she has to die for him. She does not get obsessed with the mark, but she really desires her husband's recognition of herself. She even agrees in becoming only as Aylmer's object of stigma (Karasu, 2017). Her love is not about perfectness, but about recognition. She will never become true wife if she does not give all of her to her husband. Even if it will hurt her more, she would like to do that at her own pleasure. Aylmer himself really believes in the progress of science which is exact and predictable (Sudha, 2018). He even believes in himself as the bearer of the knowledge by being confident in his ability to remove the mark. Science has brought in against nature. Aylmer's science must win against the nature of the birthmark of the wife. He even makes Georgiana as his own experiment in operation. He is a monomaniac (Yu, 2010). He could not differentiate between science and ordinary life as he mixes them all. He ignores the essential existence of his wife by making her as an object and himself as the main subject. Georgiana has become such tool for him to progress science. His love is so conditional that he also demands developments of knowledge rather than merely omitting the birthmark (Lagay, 2006).

The third plot tells about the experiment. Aylmer is hiding his own doubt but his wife knows that. Georgiana convinces him more by saying that she will drink anything he gives even though it is poison. She knows that peace will never come to Aylmer's heart and mind if he does not reach newer, better, and more perfect condition. She wants to be part of his success (Mehdi, 2014). He then gives her a colorless liquid. Her mark is fading as he continues to observe it. However, her body could not hold herself no more. She is so pale and saying to Aylmer that he is rejecting the best earth could offer. She dies as her birthmark is gone (Hawthorne, 2017).

The last plot shows how actually Aylmer is in doubt with science. Somehow, his needs of progress must be realized especially towards his own wife. He neglects the existence of his wife by making her part of his experiment. Psychoanalytically, he is seen as an obsessive-compulsive personality (Karasu, 2017). The most interesting part about this plot is Georgiana's saying at the end. She turns out to her own anxiety, which is true, that the nature is the perfect one even if it may contain imperfections. She could not move her husband's heart, but then her dying life proves her love to Aylmer. Aylmer's anxiety is actually driven by his own needs of being a scientist, not a husband. His anxiety of her birthmark is reflection of anxiety of having no progress at all while seeing imperfection. He wants to conquer nature by omitting the mark, but the mark is her life (Hawthorne, 2017). He only observes through scientific knowledge, yet he forgets to continually see how her birthmark is related to her own life. He only wants to get rid of the disease, but he neglects the symptoms. His focus is the material or the physical, not the spirit or the heart (Yu, 2010; Lagay, 2006). Georgiana has reminded him from time to time but Aylmer could not think anything than the progress. At first, Georgiana has to accept Aylmer's desire, now he has to fully understand her condition, but he has to do it in her funeral.

(Im)perfect Condition of Video-Sharing Applications

Today, almost everyone has embraced life in smartphones (Bulele and Wibowo, 2020). Abundant online applications have emerged to help people to make their lives easier as continuation of human's bodies. That is the main idea of philosophy of technology.

Moreover, applications related to entertainment also flourish. Beside online games, the popular applications are video-sharing ones, two of them are TikTok (Dilon, 2020) and Snack Video. Different from YouTube, these applications focus on smartphones and contain short duration of videos. People could record the video in dancing, eating, riding bike, studying, giving health information, or any else. The recordings then are uploaded and people could see and share them freely (Bulele and Wibowo, 2020). The applications have been such new chances for people to show themselves to public, especially viewers, even sometimes they accept such challenges to increase views of the videos. Those new chances also become new ways as job opportunities and to be famous as a celebrity of entertainment. Becoming TikTok celebrities have been said as some people's dreams. Indeed, entertainment has also become popular, in the concept of involving many people and popping-up new ideas, in online realm today (Dilon, 2020).

Video-sharing applications have become such a new world in online condition. Those may enhance better online education. More students' creativity and confidence could also be appreciated furthermore (Zaitun, Hadi, and Indriani, 2021; Adawiyah, 2020). However, people also could scroll their smartphone for hours watching content of the videos. Even some of them are also affected much by the applications. They are following the trends, doing the same actions in the videos, sharing them, and also talking about the videos in other social media. The applications are so much related to both content creators and viewers' experience towards each other (Bulele and Wibowo, 2020). Some offline media such as television and radio then also use the videos as their own contents of the programs even they have channels of their own contents. Indeed, there are a lot of creativities and uniqueness in the applications (Dilon, 2020). In short duration, people could make videos with great information, even sometimes artistic ones. Actually, just like the essence of online word, these applications are unpredictable. Great contents are seen by only few viewers, but simple ones attract more, or in reverse condition. It is not quite fixed which videos that invite more people to watch (Palupi, Meifilina, and Harumike, 2020). Sometimes, the viewers only see some themes of abundant videos, but many of them watch in general type too. As the writer said above, these applications are reflection of chances for people as those are unpredictable as well.

Online realm is both continuation of modernity aspects and post-modernism that is completely on contrary to modern ideas. Both aspects indicate that online realm is unpredictable, especially full of ambiguity. The values in the realm vary from good, bad, or even mixed (Firamadhina and Krisnani, 2020). Meanings are found in the realm, but the conditions are different from real life. Nothing is said as neutral or free-value in online realm, as everything means and is meant by people at the same time. That condition is reflected in video-sharing applications too. Ambiguity is so thick in them that make people more free in making and seeing things. For examples, on a hand, some religions prohibit people for eating too much, but some videos show persons eating many foods at the same time. It is unethical to play with other people's emotions and feelings, but prank videos are everywhere in those applications. On the other hand, people show videos of them helping the elders cross the street or giving foods to those who need. Some videos also try to wake people's awareness of their surroundings especially in this pandemic condition. Those examples are indications that the contents, including the values as well, may be vary (Omar and Dequan, 2020). Some aspects could be supported, but others should be criticized too.

The ambiguity reflected in video-sharing applications indicate that the world contained is both perfect and imperfect. People could share anything through the applications by showing their potentials and attracting viewers as well. They could do and become anything they want. They even could define themselves as they want. What they do is how they use the chances given in the applications as have been explored above (Firamadhina and

Krisnani, 2020). The perfectness is related to how content of the videos are seen through the applications itself. The images inside relate to how people's creativities are racing among each other to show their own talents. It may also include competitions within. It is not only about sharing things, but also making great and better contents (Firamadhina and Krisnani, 2020). The purposes are to attract more viewers, to be famous indicated by many spotlights for the creators, and also to become trends followed by people.

It is true that video-sharing applications may reflect the open ideas of ambiguity that bring in more chances for people to express themselves. However, that is not the main emphasis in this paper. The writer would like to show the perfect side to show that it actually asserts itself the imperfect side of it. The imperfectness is related to comparison with real life. Those applications are situated in virtual reality that, to some extent, disconnects from real world. Some experts would argue that virtual world is such continuation of real world (Palupi, Meifilina, and Harumike, 2020). Some others assert the great divide between two of them. That tension will never get resolved. What really makes sense about the tension is the matter of identity which remains different in both realms. Only one type of perspective will never be adequate to cover all of issues in this specific case of analysis.

There are three main points to indicate that these applications are related to imperfectness rather than a given world full of perfectness. Culturally, those indications are reflected from the ideas inside TikTok and Snack Video compared to real life. One world will never be the same to another, but not totally different either (Adawiyah, 2020). While those applications indicate a perfect world, the real world is full of imperfectness. Those indications are;

First, the applications require both perfect appearance of scenes and bodies. The moments captured should be exactly as wanted and the actors or the actresses should be in good manners of beauty. In this case, some scenes do not actually happen, those are made in a setting and plot. Then, the idea of originality of an event is in question. The short duration may be challenge for people to think about what information someone can give in little time, but that aspect also limit the reality itself that is beyond any horizons of space and time. Short duration video could never represent such whole of reality. People may always ask if it was truly true. It seems perfect, but it could always be questionable (Martz, 2001). For instance, a video about gold digger and someone who help others actually are made in such short film. The characters are played by actors and the plot is set in a scenario. Moreover, perfect beauty is needed with good lighting, great cameras and microphones, nice acting, and also amazing editing skills. Indeed, to make a video such confidence is required too (Dilon, 2020; Adawiyah, 2020). But then it has been a standard that the more beauty is exposed then the more views are reached. The eyes are so spoiled by the actions of beauty of bodies. People then are getting obscene in showing their curvy bodies or full make-up faces. Those need to be perfect while real world is never as it is (Martz, 2001). For example, someone who seems so beautiful doing dance in a video or capturing selfies could be really shy in doing that in open public places. Real world is about imperfectness, but the video should be taken in perfect sense.

Second, there are abundant visual effects provided to support the applications. On a side, it may enhance more creativity. But on another side, it shows that the applications require more than who people really are (Dilon, 2020). People are pushed to be more perfect and the applications give chances imaginably for them to reach that condition. They could whiten their skins, show slim perspective of their bodies, or even put more cuteness to the videos by adding stickers or emoticons. The videos reflect such aspects more than just merely reality. It is so imaginative that reality is overshadowed by these images. For example, everyone has their own uniqueness of skins, but the videos require more beauty by following trends as white and glowing skin is the most wanted skin today. So, people use whitening

effects to their videos. Becoming white is not the real side of the world. It is made for being perfect so that the videos be always in demand.

Third, the applications are lived by the hype, not the real identities. It is so temporary that has been supported by popularity rather than discourse of identities. Any theme may come and go easily, leaving no tracks but leftover memories. The existence of popular entertainment is rising beside essence (Mohsenian-Rad, 2009). People do not think about the ideas of it, how they could use it is the best they can do. In this case, identity of the people in those applications are similar to demand of the viewers and trends of the followers. In other words, identities are not defined, by dictated. Then, the sense of being real is lost and being changed by fulfilling dream of having perfect world (Martz, 2001). Instead of living more dangerously, these applications provide a condition where people could be perfect in a sense. Somehow, that perfectness is not perfect at all too, but moved by the flowing of trends. Identities are not fixed anymore, yes it is true, but somehow people do not care about them too. Then, perfectness of this kind of society is out of sense of imperfectness. The perfection itself is flawed as the demanding of perfectness is a process too that reflects imperfections as well.

Those applications, related to three points above, are seen not as world full of perfectness but world full of demands of being perfect. Diving into that world indeed needs another requirements by being perfect (Omar and Dequan, 2020). There are terms and conditions that should have been fulfilled. These are following the trends even if those may neglect own identities. Even if it is perfect, it is like a film, lived by actors in a plotted scenarios. That condition reflect crucial differences with real life, where things could suddenly happen without any drill before.

Phantasm of Unreal Reality

Phantasm is something that is not real. Phantasm is in synonym with illusion, shadow, fantasy, delusion, or even ghost and apparition (Mohsenian-Rad, 2009). All of those definition are quite not enough to speak about phantasm. However, phantasm is not a given condition, nor a thing that is final. It does not appear then disappear thoroughly. It is a process of mental imagination of representation of reality (White, 2005). Phantasm is not a product, but culturally, it is an understanding of such situation different from real reality. It shapes its own reality by re-shaping elements of real world into imaginary one. It may not be such genuine knowledge, but the senses that build it are so perceptive that formulates sensations of people's intellect (Slowik, 2014).

In the case of this writing, phantasm is closely related to unreal reality. That unreal condition will never go far away from the concept of being real itself. It is perception of senses to the world (Mohsenian-Rad, 2009). At a time, phantasm is such imagination that flourishes from true reality. It is desired to be an alternative thought to explore more about reality. It becomes critical to reality itself. At another time, people think phantasm as a myth. They understand phantasm as an illusion, something that is never true at all. Other people define it as a ghost, a figure that is so terrifying yet unpredictable (Slowik, 2014). In this aspect, phantasm is seen as out of any sense. It belongs to other unknown world that does not need to be noticed at all. At another longer time, cultural sense of those former times arise. Phantasm is analyzed as romantic side of culture. Sometimes it is classic, but more times show modern issues of that issue (White, 2005). Cultural side reflects admirations of critical points of being out of reality and terrifying parts of coming in and out of reality. Phantasm is such theater of perceptions of human's reality. It is always there as process, a not-given-one, (Slowik, 2014) and even a discourse that is lived but never come to big deal of dialogue.

Perfectness is phantasm both in *The Birthmark* and video-sharing applications. The scope of analysis is clear; there are such demands of perfectness from those who are

imperfect in reality. Another issue is clear too; the world is never perfect at all as it is full of flaws. Becoming flawless is the phantasm itself as eliminating a flaw will risk another flaw to rise more than ever imagined. As phantasm is critical imagination, bringing it into real life may disturb natural points of life. This pinpoints that phantasm is on the side of being immaterial as known best through intellect's observations. It may depart from material indication to shape its existence, but the essence remains intangible.

In *The Birthmark*, what Aylmer wants from Georgiana is such perfectness. He tries to eliminate the mark as the source of imperfectness. He believe that he can, but he fails as the mark fades alongside with her life too (Hawthorne, 2017). This is a total tension between two sides; perfectness, Aylmer, and science against imperfectness, Georgiana, and nature shown by Hawthorne. Perfectness in this case relates to beauty that is wished more by Aylmer. Georgiana who is imperfect by her birthmark must surrender under the desire of being perfect. It applies to the nature that wanted to be conquered by progress of science (Hawthorne, 2017). The former and latter sides are only different from one another as stated in duality, but actually the story is dualism of higher level of perfectness against the lower side of imperfectness of the birthmark. It could be seen too that birthmark is the source of both Aylmer's and Georgiana's anxiety. While imperfectness is given, perfectness wants to be reached as a process (Martz, 2001). Perfectness is such defense mechanism in facing anxiety of being imperfect. Aylmer is obsessed with the birthmark and he wants to omit it, while Georgiana is afraid that the mark will cease her husband's recognition about her in being a perfect couple for him (Hawthorne, 2017). It may be true that the story is closed with the winning of nature as symbol of imperfectness against fragile perfectness of science. However, interestingly, the settlement of the story comes from the death. That anxiety is finished by death of the object, that is Georgiana, left alone Aylmer with his high expectations from progress of science. Death is not both perfect and imperfect, as it is unnamable and impenetrable by any language. Story of accepting imperfectness and becoming perfectness is nothing in front of death. It is possible that another anxiety will arise once the birthmark is gone and Georgiana is alive as Aylmer never stops to desire better and more perfect world. However, it is settled once and forever by death and then the anxiety is gone too.

The video-sharing applications also show problems of perfectness. From the beauty and the shown scenes, perfect short duration of time, enormous creative visual effects, and new chances of being famous as celebrity, all of them require flawless conditions. The imperfectness will be bluntly seen if those are compared to real world. The beauty is not a natural one, but made up by treatments from certain skincare. The scenes are made through scenarios which the events rarely happen in real life. Short duration of time will never capture wholeness of meanings. Visual effects indeed add more beauty and cuteness, but those are merely supplements and not the essence at all. Being a celebrity in those application must follow the hype or will be easily forgotten (Palupi, Meifilina, and Harumike, 2020), in reverse with identities that are quite stable. As phantasm is a process, those perfectness are shaped constantly and consistently to reach such achievement of being perfect. Actually, the phantasm is not fully in being perfect, but being recognized in being perfect. Recognition is the main idea why people move to unreal world, to reach other chances besides in real life (Mohsenian-Rad, 2009). That aspect is also reflected in connections between content creators, trends, and viewers. Perfectness is about demand, not a given one. To attract more viewers, the creators follow the trends. To become trendsetter, creators need more views. To enjoy position in being viewers, more initiatives are given to the creators. These logics are the reasons why perfectness are popular interactions in the applications (Omar and Dequan, 2020). Some things could be seen in real life, so that they ask others to do unique actions. Even the viewers then become the creators to make new contents. That unreal reality is so

crowded with creations and creativity (Zaitun, Hadi, and Indriani, 2021), but that also reflects phantasm of perfectness as indication of being contrary to real world.

Those aspects above indicate how cultural aspects play big roles in analyzing the objects. It combines being critical in seeing a myth through reality of the real. Indeed, Hawthorne's story is just a fiction and people also do not always dive in to the applications. But, still those reflect condition of everyday life which is full of ambiguity too. People could move to another world with different identities, a virtual one, easily by turning on internet on smartphones (Dilon, 2020). However, some people still get used to internal conflicts to realize better world for him or herself, families, and even wider societies. The efforts are never so easy like changing identities into the virtual. Everyday life is full of phantasm and it is such human's freedom (or curse?) to live between tensions of accepting imperfectness and becoming part of perfectness.

Conclusion

The story of *The Birthmark* is related to perfectness that is desired by the husband towards the wife. The video-sharing applications indicate perfectness in having flawless beauty, scenes, times, and also chances. Both of those aspects are related to phantasm of perfectness. The phantasm is not about true or false but another sense of imagination departed from elements of real life. The analysis is clear; there are such demands of perfectness from those who are imperfect in reality. Another issue is clear too; the world is never perfect at all as it is full of flaws. Tensions of both sides will always remain like how emphasis of phantasm is differentiated from real life.

ONOMASIOLOGICAL ANALYSIS OF 21ST CENTURY WESTERN FOODS IN INDONESIA

Afrianto¹, Mega Lia²

afrianto@teknokrat.ac.id¹

Universitas Teknokrat Indonesia¹²

Abstract

This research attempts to explore an onomasiological analysis to study the types of word formation in the menu of western food in Indonesia. The aim of this research is to delineate the types of word formation process and the semantic level. To analyze the data, this research employs Stekaur's (2002) word formation framework. Furthermore, this research uses qualitative method and purposively selects three websites as the data source; those are www.wendys.com, www.american-grille.com, and www.carl'sjr.com. The data collected are in forms of words. This research found five types of word formation, such as derivation, clipping, blending, compound, and abbreviation. In addition, the affixation processes were also found. At last, this research reported that those three websites tend to create attractive menus to attract people to buy their product.

Keywords: onomasiology, western food, word formation.

Introduction

Attracting people to read and taste such a new menu is one of the ways conducted by a food shop. Nowadays, the forms of new names are easily found in food and beverages products. As the matter of fact, those two things become the main needs for every individual. This situation forces the restaurants to compete in making menus in the term of western food with unique and different names. Each restaurant intends to use word formation process strategy in supporting the appropriate menus. Therefore, meaning becomes another important thing to be considered. Every single name must have its own meaning. It is always connected with the things to which it refers. Simply put, naming aims to build such impression of the product. From these phenomena, menu of western food in Indonesia is an interesting to be analyzed. In this case, the theory of onomasiological is needed to guide the analysis. At the onomatiological level, the onomasiological theory is assigned linguistic units based on the Form-to-Meaning-Assignment Principle (FMAP).

Specifically, individual members of the onomasiological structure are linguistically expressed by word formation bases of naming units or affixes stored in the lexicon. According to Bauer (1983:12) word formation is the formation words. That there are many types of word formation processes that related to make a new words which probably appropriate in analyzing the formation of western food menus in Indonesia. Besides the semantics theory, specifically the theory referential definition of meaning is also used to

analyze the relationship between of western food menus. The meaning will be analyzed after the formation of each name described. According to Katamba (1994:120) some meanings can be connected with some word formation. The process of producing new words is certainly connected with word building. Referring to the background, the researcher formulates the problem as follows: What are the word-formation processes and the meaning of western food in Indonesia? The objective of the study is to delineate the morphological onomasiological in term of western food to reveal their word-formation process. In this case, the researchers focus on analysis of the types of word formation in the term of western food in Indonesia. The researchers choose 3 websites western food in Indonesia with the criteria. The theory adopted from Stekaur (2002). This theory focuses on onomasiological aspect.

Theory and Method

Related to naming and forming a new term or name, or even menu, there were other researchers examining this case. Liu and Liu (2014) investigated the characteristic of English Netspeak neologism and their patterns of formation from a website (www.wordspy.com). They found that netizen often creat new words and the frequent way is blending. Furthermore, Gemilasari et al (2013) investigated word formation from a teenager magazine (*Aneka Yess!*). Gemilasari et al found ten types of word formation, they are abbreviation, acronym, blending, clipping, coinage, compounding, multiple processes, borrowing, affixation, and reduplication. In addition, there is another research conducted to analyse the morpho-semantic aspect of neologism is a particular social media. It was conducted by Akunna (2012). This research was aimed to delineate the social media neologism, reveal meanings, word classes and formation, foreground the word formation of each of the social media neologisms and distinguish the most common word-classes and word-formation process among social media neologisms. The gap between those previous studies and the current research are the object and the focus of analysis. Meanwhile, the current research is focusing on word formation in websites western food in Indonesia.

Analyzing naming menu, this research employs onomasiology, which in this case examines the way in which speakers of a language lexicalise a concept existing in their community. It is also regarded as a branch of lexicology, which starts from a concept (an idea, object, quality, etc) and asks for its name. Stekaur categorized onomasiological theory into two main points. They are semantic level and onomatiological level.

There are 4 sub levels in onomasiological theory; conceptual level, semantic level, onomatiological level, and phonological level as presented in figure 1

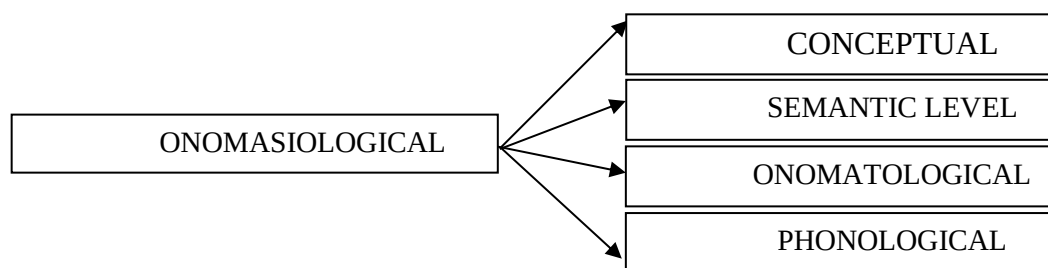

Figure 1 Onomasiological level sdopted from Stekaur (2002)

This figure reveals that the naming process passes through several stages in the mind of the speaker which are relevant to the current research:

1. The conceptual level, this involves the analysis of specific features of the nameless concept.
2. The semantic level, this involves the selection of the semantics components for the naming units. For the example: the speaker selects “etiquette” to describe social behavior.
3. The onomatological level, this involves the selection of concrete morphemes of the naming units. For the example: the speaker selects “net” and “etiquette” as the two morphemes that describe “social behavior on the internet.
4. The phonological level, this is where the forms are actually combined to form one word. For the example: the two concrete morphemes are blended to form the single word “netiquette”.

The word formation aspect falls within the principles of onomatological because the word formation process were coined to name existing concepts within the speech community. Such naming needs from the point of departure of Stekaur’s onomasiological theory. Onomasiology is the reverse side of semmasiology, which applied to concepts assigned to existing names in the speech community. Onomasiology was derived from the Greek “*onoma*” meaning “*name*” ; while semasiology was derived from Greek “*sema*”, meaning “*sign*”. It investigated the denomination of an existing concept.

Furthermore, there is a branch of linguistics that studies such patterns of word formation across and within languages, and attempts to explicate formal rules reflective of the knowledge of the speakers of those languages; it is morphology (Adams in Onyedum, 2002:10). Thus, morphological neologisms are created according to the patterns of word formation already existing in the language. In addition, morphology neologisms created through affixation, blending, compounding, clipping, acronym, abbreviation etc. According to Plag (2002:13), Words that are obviously composed by putting together smaller elements to form larger words with more complex meanings can be referred to as morphologically complex lexical items are made by the association of different constituent morphemes, then we can also analyze any complex word into its various constituent. In contrast, the words which cannot be decomposed into smaller meaningful units because they consist of only one morpheme are referred to as mono-morpheme.

The process of the speaker using language to create new words is called word formation process. According to Jackson and Amvela (2001: 16) word formation processes mean the different devices which are used in English to build new words from existing ones. Each word formation process will result in the production of a specific type of word. Related to the word formation, there are derivation, affixation, compound, conversion, clipping, blending, and abbreviations and acronyms (Yule 2010, 2006 and Plag, 2002).

This research is also aimed at semantics. Thus, the study of linguistic units and their principles of combination would not be complete without an account of what these units

mean, what they are used to talk about and what they are used to communicate. According to Cruse (1996:65), the study of words and the study of meaning make it very natural for students of linguistics to interpret the term semantics to mean more technical term for “word-meaning. Therefore, semantics is defined as the study of word meaning, in other words, semantics is more accurately described as the study of meaning.

Method of Research

This research employs qualitative method to present a depth-description of onomasiological features through word formation analysis on menus of the websites western food (Stake, 2010). The analysis specifically studies the menus to remark the types of word formation from the menus and describes the processes. In addition, this analysis is intended to invent the appliance of morphological aspects found as real usages (Creswell, 2014) and to pattern the formation (Crocker, 2009). To remark the pattern, this research manages three processes of analysis. The first, the selected data are broken down to identify the morphemes, which are bound and free. The second process is to pattern the neologism by considering the morphemes combined. And the last is to define the semantic level of the neologism.

To decide a website for the source, this research defines the criteria; those are number of visitors (up to 40,000 people per year), rate (minimal 4.5), and establishment (2000 and up). The criteria are based on Food and Drink Association (FDA). Then, there are three website, which meet with the criteria, those are 1) American Grill (established in 2001, the rate was 4,5, and the visitors are 45.000 people per year; 2) Carl’s & Jr. (established in 2000, the rate was 4,1 and the visitors are 58.000 people per year; and 3) Wendy’s (established in 2003, the rate was 4,6 and 47.326 people per year). Furthermore, it is confirmed that the data, which are the menus were collected from those website and this research manages them to extract the data through library research. This library research is intended to get the real and natural data (Silverman, 2015). In other words, this research employs documentary search by having a look at the menu as the document to gain the required data (Atkinson and Covey, 2004). Thus, the data are in the form of words.

Findings and Discussion

This research found six word process formations; they are derivation, clipping, blending, compound, and abbreviation. In addition, this research found that the three websites intend to create attractive and unique menu to attract people.

1. Derivation

No.	Words	Menu	Website
1	Unsweetened	Unsweetened Ice Tea	www.wendys.com

The word “**unsweetened**” has more than one morpheme; they are –un, sweet, –en, and –ed. ‘–un’ is a bound morpheme, which is also a prefix; ‘sweet’ is a free morpheme, which is an adjective; –en is a bound morpheme, which is a suffix; and the last one is –ed, which is a bound morpheme. Here, the prefix –**un** and suffix –**en** can also be called derivational morpheme, because when they are attached to the root “**sweet**”, then this root will have different meaning and word category. IN addition, when the word “**sweet**”, which is an adjective is added with “**en**” and becomes “**sweeten**”. Hence, it changes into verb. Suffix –**ed** in located does change the part of speech of the base for it changes verb into adjective. Moreover, prefix –**un** is not change the part of speech of the root, but it gives negative sense to the adjective “**sweet**”. Semantically, “**Unsweetened Ice Tea**” has meaning as tea served with ice without adding sugar or sweet substances.

2. Compound

No.	Words	Menu	Website
2	Buttermilk Pancake	Buttermilk Pancake	www.american-grille.com
3	Hamburger	Big Hamburger	www.carl'sjr.com
4	Clubhouse	Classic Clubhouse Sandwich	www.american-grille.com
5	Homestyle	Homestyle Chicken Wrap	www.wendys.com
6	Lemongrass	Lemongrass Tea	www.wendys.com
7	Thickburger	The Baby Back Rib Thickburger	www.american-grille.com
8	Passionfruit	Strawberry Passionfruit	www.wendys.com
9	Flatbread	Vegetarian Flatbread	www.american-grille.com
10	Cheesecake	Xango Cheesecake	www.american-grille.com

The word “**buttermilk**” consists of “**butter**” and “**milk**”. Butter and Milk are free morphemes which can stand alone as a word. The process of this formation happen when the two morphemes “**butter**” and “**milk**” joined together and generate a new word “**buttermilk**” and this kind of processed is considered as a process of compound noun. The word “**butter**” means a pale yellow solid food containing a lot of fat that is made from cream. Meanwhile the word “**milk**” means the white liquid produce by cows which people drink. In addition, this menu contents another compound which is “**pancake**”. The word “**pancake**” consists of two morphemes which are “**pan**” and “**cake**”. “**Pan**” is a noun which means a metal container that is round and often has a long handle and a lid, used for cooking things on top of cooker, and “**cake**” means a sweet food made with a mixture of flour, eggs, fat and sugar. When they come together on construct the compound word. Semantically, “**buttermilk**” is a noun which means the liquid that is left after taking the fat from cream to make butter. While “**pancake**” is a cake made from flour, eggs, sugar, milk and then cooked on a pan so that this food called pancake. Here, buttermilk refers to the main ingredient to make this pancake. The

ingredients they are whipped butter, warm maple syrup choice of bacon, ham, sausage, bicarbonate of soda, sugar, salt and Canadian bacon.

The word “**hamburger**” consists of “**ham**” and “**burger**”. This formation is categorized as compound noun in which “**ham**” and “**burger**” are free morphemes. Big Hamburger is one of menu in Carl’s & Jr. Big Hamburger is an undeniable American icon. The triple layered bun, which may look overwhelming with two all ham patties, special sauce, lettuce, cheese, pickles and onion all on a sesame seed bun. All of ingredients it makes Big Hamburger different from others. The meaning “big” is the triple layered bun with two all ham patties.

The word “**clubhouse**” is considered to have more than one morpheme. It is so obvious because there are two free morpheme that are “**club**” and “**house**”. Both can stand alone and have a meaning by themselves and they are combined into one word and then generated as a new word, therefore it is categorized as compound. The word “**club**” is an organization people with a common purpose or interest, who meet regularly to share activity. Then, the word “**house**” is a building that people usually one family or group live in. In this case, the word “**Clubhouse**” means a building used at a sporting facility such as a racetrack or golf course. Classic Clubhouse Sandwich is one of menu in American Grill’s restaurant. The classic clubhouse sandwich is a triple-decker sandwich made up of three slices toasted white bread, deli-sliced turkey or chicken, bacon, lettuce, tomatoes, and mayonnaise. It is often cut into quarter and halves and held together by toothpicks. The name classic clubhouse sandwich may have originated at the Union Club of New York City.

The word “**homestyle**” has two morphemes that are “**home**” and “**style**”. Both can stand alone and have a meaning by themselves. The formation process is compound. Homestyle Chicken Wrap is one of menu in Wendy’s. The ingredients are chicken breast covers with crisp lettuce, cheese, and creamy ranch sauce all wrapped in a flour tortilla. This wrap is a side dish usually can be as a meal. This side dish is really simple if you hurried in a rush. Meanwhile, the word “homestyle” means that such as would be made or provide at home simple and unpretentious. Thus, homestyle chicken wrap describe after you eat this wrap feels like as if in home, and you can get addiction because you find the comfort sensation.

The word “**lemongrass**” consists of two morphemes. The first is the free morpheme “**lemon**” and the second free morpheme is “**grass**”. The combination between two words into one word categorized as compound. This type of word formation is compound noun because the word “**lemon**” is a noun and “**grass**” is a noun. These words can stand alone and have their own meanings. Lemongrass Tea is one of beverages in Wendy’s menus. The combination of these two words “lemon” and “grass” is a tropical grass having aromatic stalks used as a flavoring in cooking yielding aromatic oil used in medicine. Lemongrass is used as a flavoring.

The next compound word consists of two free morphemes “**burger**” and “**thick**”. In this case, the word formation is a kind of left headed compound for it has a focus on “**thick**”

in the left side of the word. The Baby Back Rib Thickburger is one of menu in American Grill's. The baby back rib means that back rib are cut from where the rib meets the spine after the loin is removed. The upper ribs are called baby back rib, but not because they come from a baby pig. They're only called the baby because they are shorter in relation to the bigger spareribs. Each baby back rib rack averages 10 to 13 curved ribs that are 3 to 6 inches long and weigh about 1 1/2 to 2 pounds, which feeds about 2 people. Baby back ribs are very tender. Meanwhile the word "thickburger" here is there are three layered in each layer there are different topping of seed bun and refers to the baby back rib.

The word "**passionfruit**" has two free morphemes "**passion**" and "**fruit**". The process of word formation is categorized as compound. This is type of compound noun because the word "**passion**" is a noun and the word "**fruit**" is a noun too. "**passionfruit**" means that one kind of fruit, a small fruit with thick purple or yellow skin and many seeds.

The word "**flatbread**" consists of two free morphemes; "**flat**" and "**bread**". The word "**flat**" means smooth no curved and other part is "**bread**" means that staple food prepare from dough of flour and water. The combination between "**flat**" and "**bread**" become "**flatbread**" is means that a bread made with flour, water and salt and then thoroughly rolled into flattened dough and flatbread are unleavened yeast. This formation categorized as compound noun which "**flat**" is an adjective and "**bread**" is a noun. The combination between "**flat**" and "**bread**" become "flatbread" means that thin bread made without yeast a substance that makes bread swell and become light. Commonly, flatbread is made of whole grains and little added fat or sugar. Whole grain breads have high amounts of fiber, an essential nutrient that can help prevent obesity, according to ChooseMyPlate.gov. Whole grain flatbread may also help reduce your risk of constipation, diabetes, heart disease and high cholesterol.

"**Cheesecake**" is also formed in the process of compounding. Compounding refers to a combination of two words to form a new word. Cheesecake consists of two words which are "**cheese**" and "**cake**". Cheese is a noun and cake is a noun too. The word "**cheesecake**" means that a cake made from a layer of biscuit or a sweet pastry base covered with soft cheese, sugar, eggs, and sometimes fruit. Thus, Xango Cheesecake is one of desserts in American Grill's Restaurant menu. In addition the word "Xango" is a Mexican dessert that has a cream cheese mix that is rolled in a tortilla and then deep fried.

3. Clipping

No.	Words	Menu	Website
11	Decaf	Brewed Decaf CoffeeBrewed	www.wendys.com
12	Veggie	Veggie Burger	www.wendys.com

Decaf Coffee, the word "**decaf**" is clipped from the word "**decaffeinated**". The word "**decaffeinated**" is ended by "**ed**" and categorized as suffix and it is bound morpheme

meaning. Suffix **-ed** in located does change the part of speech of the base for it changes the verb into adjective. While the word **“brewed”** consist of two morphemes which are **“brew”** is a free morpheme and suffix **“-ed”** is a bound morpheme. Brew is to make beer and a verb. When the word become **“brewed”** is an adjective. In the result, the word **“decaffeinated”** become is an adjective. Meanwhile, the process of word formation which is cut polysyllabic word to monosyllabic word categorized as clipping. Clipping appear as a rather mix of forms abbreviated from larger word. However, share a common function, namely, to express familiarity with denotation.

Brewed Decaffeinate Coffee is one of beverages in Wendy’s menu. It is served in regular and large portion. The name decaf come from decaffeinated to make people easy to remember. It is coffee from coffee beans that have had at least 97% of the caffeine is removed. There are many ways to remove caffeine from coffee beans. Most of them include water, organic solvents or carbon dioxide. Coffee beans are washed in the solvent until the caffeine has been extracted into it, then the solvent is removed. The beans are decaffeinated before they are roasted and ground. The nutritional value of decaf coffee should be almost identical to regular coffee, apart from the caffeine content. However, the taste and smell may become a little milder and the color may change, depending on the method used. This can make decaf coffee more pleasing to those who are sensitive to the bitter taste and smell of regular coffee.

Clipping refers to cutting the polysyllabic word to monosyllabic word. The word **“veggie”** is included in category of clipping or hypocorism. The word **“vegg”** categorized as clipping because clipped from the word **“vegetarian”**. Meanwhile the letter of **“ie”** is include in category of hypocorism. According to Yule 2010:243, clipping is a process of reducing word into a shorter form and adding **“-y”** or **“-ie”** at the end. It is noteworthy that usually hypocorism of the letters **“ie”** is used in Australian and British and it belongs to slang word. Spolsky (1998: 35) defines slang as a special kinds of intimate or in group speech and associated with peer group and gang speech to obtain some degree of privacy and to show the solidarity among the members. Here, the word **“veggie”** implies a person who likes vegetables or does not eat meat.

Veggie burger is one of favorite menu in Wendy’s restaurant. Many veggie burgers are made from vegetables, whole grains and legumes (like beans). They are good for health because the ingredients that provide fiber and a variety of vitamins and minerals.

4. Blending

No.	Words	Menu	Website
13	Baconator	Baconator	www.wendys.com
14	Charbroiled	Charbroiled Burger	www.carl'sjr.com

“Baconator” is included in the category of word formation which is blending. Blending signifies a combination of at least two words. The word of **“baconator”** is a combination of

“**bacon**” and “**dictator**”. “**bacon**” is meat from the back or sides of a pig and it is often eaten fried in thin. Meanwhile the word “**dictator**” is a leader who has complete power in a country. Baconator is a burger in Wendy’s, which consists of two 4oz beef patties; two slice of American cheese, six strips of bacon, mayonnaise and ketchup on a bun. The sandwich is layered so that there are three strips of bacon on the top of each patty and these make burger bigger. Therefore, **Baconator** means great or refers to a powerful thing which is derived from the word dictator. Wendy’s is the first fast food restaurant introducing the power of big burger bacon with different ingredients to make people fall into power and cannot turn to another.

The word “**charbroiled**” consists of two free morphemes; “**charcoal**” and “**broil**”, in addition the letter “**ed**” is bound morpheme categorized as suffix. According to Rozelin (2011) this suffix is used to form adjective from verbal base. Regarding its composition, this word is categorized into blending. The word **charcoal** is similar to coal that can be used as fuel and the word broil means cooking something under a very hot surface in a cooker and the suffix **-ed** changes the verb into adjective. Charbroiled Burger is special menu in Carl’s & Jr fast food restaurant. In other words, **Charbroiled** involves cooking meat at very high temperatures on a metal grate over a heat source. Charbroiled burgers are cooked over an open flame.

5. Abbreviation

No.	Words	Menu	Website
15	BC	BC Wild Salmon	www.american-grille.com
16	BLT	Crispy Chicken BLT	www.wendys.com
17	Jr	Jr. Cheeseburger	www.wendys.com
18	BBQ	Sweet & Bold BBQ Dipping Sauce	www.american-grille.com

BC stands for “**British**” and “**Colombia**”. The process of this word formation is to shorten words by taking the initial letter to represent the word. The wild salmon is from British Colombia, which is in Canada. It is one of most spectacular seafood product in the world. The next datum is **BLT**. Here, it has three letters, which refers to three words; those are **Bacon**, **Lettuce**, and **Tomato**. In this case, the process of this formation is abbreviation since each initial from the words are taken and combined. Crispy Chicken BLT is a hamburger by Wendy’s fast food restaurant which has different ingredients in it; those are chicken, two slice of thick cut smoked bacon, a slice of American cheese, mayonnaise, a leaf of lettuce, and a slice of tomato. That is blend of a crispy chicken BLT. Commonly hamburger identic with meat and bun but in Wendy’s restaurant not only serve hamburger with meat but also with vegetable. It makes this hamburger complement to other ingredients.

Furthermore, **Jr** represents “**Junior**”, the word formation process of it is when the word “**Junior**” is shortened in two letters. Jr. Cheeseburger is a hamburger by Wendy’s fast-food restaurant. “Jr” is usually used at the end of a man’s name to show that he is the son of a man with the same name. So, this hamburger is the smaller than baconator and son of baconator. The last datum is **BBQ**. It represents “**Barbeque**”. It has different way to form the abbreviation since it takes three letters from a word.

Conclusion

This research confirms that naming menu with an attractive combination and formation is an alternative way to attract people’s attention to try and to taste a menu in a restaurant. Regarding this naming, there are five ways found in menus of three fast food restaurants namely www.wendys.com, www.american-grille.com, and www.carl’sjr.com. Morphologically, these five ways refer to derivation, clipping, blending, compound, and abbreviation. Furthermore, it is found that semantically each word or morpheme used in a menu implies its real meaning and it becomes the characteristics. It is also found that the menus form new terms or words especially the abbreviation process.

In closing, the phenomena of word formation process happening in the 21st century especially in the term of western food in Indonesia is the fact. Those three websites tend to make such a different, unique, and attractive menu to attract people to buy their product. They create the new words or unique menu in order to makes people curious about the menu.

Teachers' Code Switching in EFL Classroom for Indonesian Tertiary Students

Laila Ulsi Qodriani¹, Oktiana Zaida²
ani@teknokrat.ac.id¹, okti_zaida@gmail.com²

Faculty of Arts and Education, Universitas Teknokrat Indonesia¹

Abstract

This research is aimed at examining the application of code-switching features by the lecturer in an EFL classroom at the university level. The objective of the research is to find out the types of code-switching features used by them especially for adult learning in foreign language. Regarding this, the researcher applied Poplack's (2000) theory on tag switching, intra-sentential switching, and inter-sentential switching. The data was transcribed into sentences based on the transcription concept by Flowerdew (2013). This study revealed tag switching with 104 data, intra-sentential switching 132 data and the last is inter-sentential switching with 77 data. By the finding of each code-switching feature, this study showed that code-switching is still applied in EFL classroom even at the university-level to enhance the students' ability in English communication skills.

Key Words: code-switching, EFL classroom, inter-sentential switching, intra-sentential switching, tag switching.

Introduction

During the activity in EFL (English as Foreign Language) classroom, students and lecturers are required to communicate in English. Classroom code-switching is a common scenario in many multilingual and multicultural classes. In general, some experts agree on defining code-switching as the alternating use of two or more languages in the same utterance or conversation (Gardner-Chloros, 1997; Milroy and Musyken, 1995; Myers-Scotton, 1993; Valdes-Fallis, 1978). As a part of the global transformation in the methods and techniques of English language teaching, we need to consider classroom code-switching as a fact that cannot be ignored in any way especially in a country like Indonesia where English is taught as a foreign language. Nevertheless, in most cases, Indonesian students tend to switch codes, and it is also common in teachers' discourse.

Since the 1990s, the number of studies started to examine an issue related to the target (L2) and native (L1) use in an EFL classroom. In the past, some studies proposed L1 use contrasted the pedagogy of teaching English through English (Chambers, 1991; Halliwell & Jones, 1991). For those studies, teaching through the target language makes the language authentic and helps learners to be familiar with the whole English environment. This statement supports Krashen's (1981) comprehensible input and natural order hypothesis.

Guthrie (1984) has early questioned whether the fact that a class is conducted entirely in the target language results in greater intake by those learners. It also added by Chowdury (2010) that some approaches support mother tongue interference whereas others consider it as a 'taboo' considering that it may hamper the foreign or second

language acquisition. It seems that the debate between L1 and L2 use has existed for a long time. However, recently, this has been questioned and some research studies show that L1 is also beneficial in English learning classrooms.

In the case of monolingual countries where English is used and taught as a foreign language, the scenario is different from that of multilingual countries. Indonesia is a monolingual country where *Bahasa Indonesia* is the national language that is used as the mode of instruction at the primary, secondary and tertiary levels in most of the educational institutions. *Bahasa Indonesia* is also the official language used widely in all the government institutions. This may be the apparent picture of a monolingual country but English has a growing demand here and being a part of the global community especially to face Asean Economic Community. The necessity and importance to learn English are felt more and more and day by day.

As Chowdhury stated, ESL/EFL classrooms students were obliged to use the target language within the classroom for any kind of communication. Then, within an EFL classroom, the target language is expected to be the main language in the classroom, both as the language of instruction and communication (Panayi, 2015). In accordance, the rule of using English within the English classroom may due to the goal of the EFL classroom where English becomes the main object to be mastered by the students.

The application of the EFL classroom in Indonesia is even started from elementary school approximately for three to six years which leads to more than ten years of English learning until the university level. Those years in experiencing English learning will be beneficial for the students to face international communication where English becomes the main demand, especially university students. Here, university students are expected to have better skills in English communication due to their time in experiencing English Learning.

However, some researchers still found problems related to English learning in EFL classroom of university students. One of them is Mujiono, et al (2013) who had done research on Indonesian EFL classrooms toward university students. It was found that English lecturers are facing problems because students are not proficient in English language particularly in speaking. Furthermore, EFL teaching in the Indonesian context has encountered significant problems, such as low teacher competence, low student motivation and low English competence among students (Lengkenawati, 2005; Luciana, 2006; Soepriyatna, 2012). Besides, Yuliana (2015) mentioned that learners have limited knowledge of the foreign language whereas the teacher knows it well. Therefore, the English lecturers as the role model to input English knowledge to the students need to have strategy in order to build effective communication to reach the goals of the class. Linguistically, a strategy in EFL classroom to prevent ineffective classroom and misunderstanding during the class is called code-switching. Code-switching in the EFL classroom is “a good strategy of efficiency in foreign language teaching” (Jingxia, 2010: 10).

As a brief definition, Jingxia (2010:10) explained that “in the context of the foreign language classroom, it [code-switching] refers to the alternate use of the first language and the target language, a means of communication by language teachers when the need arises”. Thus code-switching will help students to understand what the lecturers discuss in an English classroom. Then this later will drive them to have effective communication in the class. Moreover, code-switching is significant in a country like Indonesia. This situation is supported by this statement “We need to

consider classroom code-switching as a fact which cannot be ignored in any way especially in Indonesia where English is taught as a foreign language” (Yuliyana, 2015: 106).

At the undergraduate level English is included as a compulsory course for the non-English major students studying in both public and private universities. In public universities, there is no specific instruction from the university authority regarding classroom language usage. On the other hand, in some private universities the medium of instruction is English, which is an obligatory rule for the teachers even taking other courses. The policy in English language institutions demands that English teachers use only English in teaching. But sometimes, even in the private university classroom discourse, we find mother tongue interference as a common fact. This phenomenon creates scopes for classroom code-switching.

The example of the Indonesian EFL classroom is EFB (English for Business) classroom for students who major in Information System and Informatics Engineering in Universitas Teknokrat Indonesia. In those classes the students are dominantly studying computer knowledge and computer programs, while special in EFB classroom, they learned how to communicate and build relationship of business by using English. Then, this excellence class is very useful for students as preparation for their communication skills in the future. Due to the problem of EFL classroom at university level as the researcher mention above, the researcher would like to analyze code-switching used by EFB’s lecturers as a classroom strategy to achieve the goals and effective communication in the class. Moreover, because EFB classroom is for non-English students, the researcher assumes that there is low motivation of the students to learn English compared to the English students. This conclusion comes after the researcher saw students’ problems in understanding basic knowledge of English such as mentioning number and spelling their names. This will force lecturers to have strategy in switching the language to build communication and English atmosphere during the class in form of code-switching features. Consequently, the researcher will focus to analyze code-switching features on how the arrangement of the lecturer’s language to communicate in the classroom. Thus, three of EFB lecturers (symbolized by ‘L’) was chosen based on some criteria; Master Degree of English, five years teaching experience, teaching EFB class at least one year. This study used a qualitative method while data were collected through video recording.

Findings and Discussion

By adopting the concept from Poplack (2000), here is the accumulative result of code-switching features by ‘L’ in the EFB Classroom.

Code-Switching Features by ‘L’		
Tag Switching	Intra-sentential Switching	Inter-sentential Switching
104	132	77

The accumulative result of code-switching features by ‘L’

1. Tag Switching

Excerpt 1

Line	Speaker	Utterance
36	L	Yes sit down please (0.3) <u>Do not be late anymore ya</u> (.) So
37		(0.4) Next meeting (0.3) Do you have a class before coming to
38		my class↑ ((asking all students)) Do you have a class at one↑
39		(0.3) Ya if you have a class before coming to my class↑ (0.1)
40		Did you study before coming to my class↑

L uttered the sentences when one of the students came late to the class. Firstly, L pleased the student who came late to have a sit. Then, L reminded the student to not come late to the classroom for the next meeting. Afterward, L asked all students whether they had a class before coming to the EFB class or not to decide the limitation time of lateness.

Seeing the underlined sentence inline 36 was uttered as an imperative sentence where L reminded the student not to come late in the class anymore. As Dill (2012) mentioned that an imperative sentence is a command, advice, a request, a wish or a warning. These sentences start with an action verb and usually end with a period. In that imperative sentence inline 36, the form of the sentence is in English and *Bahasa Indonesia*. Here, L uttered the sentence firstly in English and as assertion L inserted the word ‘ya’ at the end of the sentence in *Bahasa Indonesia*. The word ‘ya’ in *Bahasa Indonesia* is included as particle-like *kan*, *kah*, *sih*, and *lah* as an assertion word.

As what Poplack (2000) asserted that tag switching is the insertion of a tag phrase or a word that is added to a sentence for emphasis. Line 36 is clear that in one sentence there are two languages, English and *Bahasa Indonesia* which are mentioned as code-switching. First is English in ‘*Do not be late anymore*’ and L inserted the word ‘ya’ as a tag to emphasis in *Bahasa Indonesia* at the end of the sentence. Then the sentence becomes “*Do not be late anymore ya* (.)” as the combination of two languages to ask student to obey the rule which is to not come late in the classroom anymore. By the insertion of ‘ya’ as an assertion word in *Bahasa Indonesia* within English sentence, the underlined sentence in line 36 is considered as tag switching.

<i>Do not be late anymore</i>	<i>ya</i> (.)
L2	L1

Excerpt 2

Line	Speaker	Utterance
114	L	Three, Prasetyo (.) Is there any↑ (0.4) Ok sampe sini dulu (.)
115		So I'll give this attendance list (.) So be ready. <u>Yok, please</u>
116		<u>come, Ade</u> (0.3) This one, and tell us your identity (.) Do not
117		forget ya↑ To mention greeting and since like what I wrote ya
118		at the time↑ Do you still remember right↑ Do you bring your
119		module↑

L uttered the sentences line 114-119 was when L finished in giving the order number for each student to come in front of their presentation and to start the presentation. While waiting for the student's preparation, L reminded to tell the speech starting from 'greeting' as what it had written in previous meetings and asked other students about their module. In calling the student named Ade, L used tag switching.

Yok,	<i>please come, Ade</i> (.)
L1	L2

In this imperative sentence, L uttered the word 'Yok' at the beginning of the sentence in *Bahasa Indonesia* means as instruction for the student to come in front. The word 'Yok' in *Bahasa Indonesia* is included as particle with the function as an assertion word. 'Yok' is actually the non-formal version of the word 'Ayuk' to instruct others to do something.

Excerpt 3

Line	Speaker	Utterance
504	L	<u>Are you Batakese gak sih↑</u>

Sentences line 504 was when one of the students was presenting his 'self-introduction'. L asked to ensure the tribe of the student. As what Dill (2012) mentioned that interrogative sentence is also known as questions. When people use an interrogative sentence, they are expecting an answer from the question. In that interrogative sentence L uttered the sentence firstly in English and as assertion L inserted the phrase 'gak sih' at the end. The phrase 'gak sih' in *Bahasa Indonesia* is included as particle with the function as an assertion word in negative interrogative.

Excerpt 4

Line	Speaker	Utterance
727	L	Rata rata game lovers semua ya (.) Ok, continue please (.) (0.6)
728		No game no life (.) So you spent your life with the game (.)
729		That's bored, Ok (.) <u>Yuk, continue</u> (.) After this ↑ (0.7) Adi,
730		Maksudnya, later on, do not have that kind of motto but with
731		game hopefully you can get many inspirations ya (.) Jangan
732		sampe addicted of the game (.) Ok (.) Jangan sampe kecanduan
733		game (.)

The situation here was when one of the students finished his presentation about self-introduction L suggested the student avoid the game addicted. Here, in asking the other students to come in front, L used tag switching. This tag switching of this sentence can be seen by seeing the underlined sentence line 729 which was uttered by L is an imperative sentence where L asked the other students to continue their presentation. In that imperative sentence the word 'Yuk' in *Bahasa Indonesia* at the beginning of the sentence is included as particle with the function as an assertion word. 'Yuk' is actually the non-formal version of the word 'Ayuk' to instruct others to do something.

Yuk,	<i>continue</i> (.)
L1	L2

2. Intra-sentential Switching

Excerpt 5

Line	Speaker	Utterance
124	L	No reasons ya↑ How about you↑ Module↑ Modul↑ ((asking other students)) (0.3) Ok, I'll give you tolerance for today but
125		not next week (.) Hari ini saya kasih, boleh dulu deh (.) I'll
126		give you big tolerance today but not next week (.)
127		Ok↑ <u>Yang</u>
128		<u>baru dateng, baru jadi new comer kesini, you have to bring the</u>
129		<u>book tomorrow</u> (.) Ya (.) You may start now (.) (0.2) Ya Dwi,

130	eh siapa↑ Ade (.)
-----	-------------------

In reminding the student to bring the module for the next meeting, L used intra-sentential switching. L uttered the sentence both English and *Bahasa Indonesia* within a sentence where not only inserting one or two words in *Bahasa Indonesia*.

<i>Yang baru datang, baru jadi</i>	<i>new comer</i>	<i>kesini</i>	<i>You have to bring the book tomorrow (.)</i>
L1	L2	L1	L2

Excerpt 6

Line	Speaker	Utterance
169	L	Salam maksud Miss L itu apakah itu nanti <u>greetingnya</u> <u>itu good</u>
170		<u>afternoon, ok (.)</u> (0.2) Bukan berarti yang nonmuslim nanti
171		harus bilang wassalamu'alaikum bukan (.) In this case, uh you
172		have to mention greeting based on the situation (.) Ya Ade,
173		next time you have to louder your voice (.) You are male (.)
174		(0.2) Kamu laki laki suaranya harus tegas (.) Jangan ehehe
175		good morning good afternoon guys uh ya gak jelas gitu ya (.)
176		So it should be clear (0.3) Latihan lagi lebih baik kedepannya.
177		Ok↑ This is still bad (.) I mean the score is not really good. I
178		hope that you can later on improve (.) Ok↑ Harus di improve
179		lagi terus terusan ya↑ Jangan enggak. Next↑ (0.3) Siapa↑ Dewi
180		ya↑

The intra-sentential switching can be seen by seeing the underlined sentence line 169-170 which an imperative sentence where L suggested the student change his greeting for next presentation properly.

<i>Salam maksud</i>	<i>Miss</i>	<i>Itu apakah itu nanti</i>	<i>greeting</i>	<i>nya</i>	<i>itu</i>	<i>Good afternoon, ok (.)</i>
L1	L2	L1	L2	L1	L1	L2

Here the switching in English and *Bahasa Indonesia* was at the beginning ‘*Salam maksud*’, then switched into English for two words ‘*Miss L*’, and switched again into *Bahasa Indonesia* for four words ‘*itu apakah itu nanti*’, and combine them in word ‘*greetingnya*’, then L continued with *Bahasa Indonesia* in word ‘*itu*’ while at the end L closed his sentence in English ‘*good afternoon, ok (.)*’.

Excerpt 7

Line	Speaker	Utterance
349	L	Six (.) Number six (.) Vera↑ (0.2) Yes you (.) So Vera, (0.5) so
350		letter you may mention your friends’ number (.) (0.3) <u>Siapa</u>
351		who haven’t gotten the name↑ ((asking other students)) Written
352		the name, so you may write it down here (.) Yok please,
353		Prasetyo (.) Come (.) Ya (.)

The context of the classroom where L uttered the sentences in line 349-353 was when the lecturer finished in giving the order number of the presentation and previously there was a student who asked where should he put his name on the attendance list because there was no his name there. Then, the lecturer asked the students who haven’t written down the name in the attendance list. This sentence is mentioned as intra-sentential switching after seeing the structure of the underline sentence in line 350-351.

<i>Siapa</i>	<i>who haven’t gotten the name↑</i>
L1	L2

In sentence *Siapa who haven’t gotten the name↑*” is considered as intra-sentential switching since the switching also could be done only in one part as long as the word or phrase is not a tag or assertion word, whether it was in the beginning, middle, or the end of a sentence, such as seen in the sentence above. Considering the structure of the sentence the lecturer only switched at the beginning of the sentence by inserting *Bahasa Indonesia* word ‘*siapa*’.

Excerpt 8

Line	Speaker	Utterance
895	L	Give applause, please for the last one (.) (0.3) Ya (.) (0.1)
896		Everybody must have their own weaknesses and must have
897		their own strength (.) Punya kelebihan, kekurangan (.) <u>Yang</u>
898		<u>merasa masih belum terlalu baik Englishnya, please try</u>
899		<u>to still</u> practice and practice, learn and learn (.) Ok (.) Since it

	is still
900	in a learning process (.) So basically you learn something (.)
901	(0.2) Jangan bangga dulu kalo Englishnya sudah merasa lebih
902	baik gitu ya (.) But you still have a practice (.) Ok (.) (0.3)
903	There are some things that I'll try to give evaluation for
904	months, especially (.) Month, Months in English (.) (0.8) Ok (.)
905	Month (.) Are you familiar with this one (.) January, February,
906	how do you mention↑

The context of the classroom was when one of the students finished his presentation and L was evaluating the presentation as a whole then she suggested the student to keep practicing to have better presentation. In suggesting the student to change the greeting for next presentation, L used intra-sentential switching.

<i>Yang merasa belum terlalu baik</i>	<i>English</i>	<i>nya</i>	<i>Please try to still practice and practice, learn and learn (.)</i>
L1	L2	L2	L2

3. Inter-sentential switching

Excerpt 9

Line	Speaker	Utterance
701	L	Gaca (0.15) Kalian jangan merasa please do not feel
702		intimidated uh near males ya↑ <u>Jangan merasa terintimidasi</u>
703		<u>karna cuma bertiga (.) There is me here</u> (0.20) Aditia
704		Gaca, do you know the meaning of your name↑

L uttered the sentences in line 701-704 was when the lecturer called one of the students named Gaca to present his presentation about self-introduction. Before those utterances, the situation of the class was really crowded by male voices. Since the number of the students in this class was dominantly by male. Then, L advised the female students to not feel intimidated because there were many male compare to female. L continued her statement by saying that there was L as the woman lecturer. Afterwards, L asked the student who would present his self-introduction presentation about the meaning of his name. In advising the female students, L used inter-sentential switching. Thus, the underline sentences in line 702-703 are considered as inter-sentential switching.

In line 702-703 which were uttered by L is an imperative sentence where L advised female students to not feel intimidated. Here, L was switching the language when saying the imperative and declarative sentence by two different languages which are English and *Bahasa Indonesia*.

<i>Jangan merasa terintimidasi karna cuma bertiga (.)</i>	<i>There is me here (.)</i>
L1	L2

Excerpt 10

Line	Speaker	Utterance
957	L	Watching Korean Drama (.) ((laugh)) Ok, well Korean Drama,
958		etc, ok (.) Find another hobby that could later on help your
959		English, help your life even ya↑ Ok (.) (0.4) It is whenever you
960		have hobby one (.) But whenever you have more than one
961		hobby (.) What should be written down↑ What should be
962		mentioned↑ My hobbies aaare apa tadi ya↑ (0.2) Misalnya
963		playing football playing ya football (.) Playing apalagi tadi
964		basketball for example, and futsal (.) When you, siapa tadi↑
965		<u>Who is the one who like playing basketball↑ Tadi saya bilang</u>
966		<u>bisa lompat (/)</u> Oh Agil ya↑ (0.2) Agil, what, who is your
967		favorite player↑ Player for basketball (.) Do you have a favorite
968		player↑

This situation was when the lecturer evaluated the students' presentation. They were discussing about how to mention 'hobby'. During the discussion, L remembered about one of the students who had a quite big body then he liked playing basketball. Then, L asked who the student she meant was. By seeing the underline sentences in line 965-966 L was switching the language when saying those two interrogative sentences in English and *Bahasa Indonesia*.

<i>Who is the one who like playing basketball↑</i>	<i>Tadi yang saya bilang bisa lompat (/)</i>
L2	L1

Excerpt 11

Line	Speaker	Utterance
973	L	Ok (.) Ya (.) That kind of club (.) Ok, I am not familiar with
974		that (.) Ok, good (.) So you know it well (.) So (0.2) just
975		practice it well, ya↑ Terus berlatih, jadi siapa tau kamu menjadi
976		pemain basketball yang sering ikut kompetisi ya (.) Walaupun
977		tingkat univeritas that would be fine (.) Gak papa (.) <u>Yang</u>
978		<u>penting aktif kamu ya (.) You have to be active (.)</u> ((done in
979		asking the student)) What else↑ About the manner (.) Ok, since
980		it is still first time for you, right↑ So you can just ok, introduce
981		yourself (.) Stand up in a proper one (.) Gak yang begini ya (.)
982		Gak yang kayak apa so please use the proper one (.) You are
983		male (.) Yang laki laki harus tunjukan that you are also
984		confident (.) Percaya diri dong yang cewe juga ya (.) That's
985		good (.) Tadi sudah ada yang cukup baik buat yang from
986		female, tinggal caranya (.) Masih first time (.) Terbiasa kalian
987		maju kedepan, akan terbiasa menambah kepercayaan diri (.)
988		Percaya diri bukan berarti sombong ya↑

The context of the classroom was when the lecturer asked one of the students who like to play basketball about his favorite basketball player. After the student mentioned his favorite basketball player, the lecturer advised the student to keep active in practicing basketball playing. In advising the student uttered imperative sentences. Here, L was switching the language when saying those two imperative sentences in English and *Bahasa Indonesia* without inserting other language in each sentence.

<i>Yang penting aktif kamu ya (.)</i>	<i>You have to be active (.)</i>
L1	L2

Excerpt 12

Line	Speaker	Utterance
1071	L	Page four ya↑ The last one is page four (0.6) You can see over
1072		here everybody (.) Asking someone's name on page six (0.3)
1073		Would you open page six, please↑ (0.2) Ok, introducing
1074		yourself (.) You have done (.) You have introduced yourself
1075		(0.2) But in the reality you do not need to introduce like that
1076		long things (.) I mean (0.2) long kind of things (.) I mean like
1077		my address, or I live (.) Oh ya, I live on at tadi masih ada
1078		beberapa, be careful (.) I live in remember in for street (.) On
1079		for (0.3) eh, in for city (.) On for street, ya↑ At for numbers,
1080		ya↑ But whenever you this one (.) Introducing yourself by title
1081		and occupation, number two still page six (.) Ok↑ Kalo nanti
1082		punya gelar atau position atau jabatan kalian ya (.) Like this
1083		one (0.3) See this one (.) My title (.) I am Claudia for
1084		Accounting Manager of Bank (.) Ok (.) Kalian not from
1085		accounting ya, for example you are a programmer (.) Um I
1086		hope ya (0.3) Just say that ok (.) <u>I am a programmer of World</u>
1087		<u>Bank from Indonesia for example (.) Jadi posisi manajer nya</u>
1088		<u>dibelakang (.)</u> Misalnya kalo manajer pemasaran apa tu↑

The inter-sentential switching can be seen by seeing the underline sentences in line 1086-1088 was when the lecturer finished evaluating the students' presentation about self-introduction, L continued the discussion on page four in the module which was discussing about occupation. The sentences are declarative sentences. L was switching the language when saying those two declarative sentences in English and *Bahasa Indonesia* without inserting other language in each sentence.

<i>I am a programmer of World Bank from Indonesia for example (.)</i>	<i>Jadi posisi manajer nya dibelakang (.)</i>
L2	L1

Conclusion

After analyzing the data, the researcher found in total 104 data for tag switching, 132 data for intra-sentential switching, and 77 data inter-sentential switching in inter-sentential switching. L as the lecturer in EFB classroom used three types of code switching features. As it has been earlier discussed, the issue of code switching in an EFL classroom seems not only to be unavoidable but necessary due to students' competence and motivation to learn English which was still low. Code switching which is meant as strategy used in order to help learners achieve the best results, without forgetting the target language. When teachers choose to code switch from the L2 to the L1, and vice versa, they should only choose to do so for better results, to motivate students or even to clarify certain tasks. As one of strategy in EFL classroom, code switching is potential to build the students competence and motivation to learn English. Moreover, code switching is also good to be applied in non-classroom environment to exchange information or knowledge by using code switching features to achieve good result of English communication.

A Three-Way Interaction Using Technology in Language and Literature Classrooms

Akhyar Rido¹

akhyar_rido@teknokrat.ac.id¹

Universitas Teknokrat Indonesia¹

Abstract

Currently, there have been major changes in the education sector, especially after the era of the covid-19 pandemic and the industrial revolution 4.0. Changes happen especially in the learning process, from in-person to online mode. This paper explores the transition of learning in the faculty of arts and education Universitas Teknokrat Indonesia during disruption-covid era, focusing on maximizing a three-way interaction using technology, particularly in language and literature classrooms. This paper highlights how the faculty promotes interactions between student and lecturer, student and student, as well as student and learning material using synchronous and asynchronous platforms mainly through the university open online course or SPADA, the university youtube channel or *Kuliah Teknokrat*, video conference, and the university library online public access catalogue and e-journals. The faculty also offers remote alumni and industry talks, webinars, social services, and researches and publications programs to support faculty in making this transition. As a result, students have some alternatives modes and platforms of learning where they can interact with their lecturers, other students, and learning material, and society out of campus. In addition, students become more productive, successfully completing their courses and publishing their projects (articles, book reviews, poems, and short stories) in national journals and newspapers. This study suggests that language and literature faculty and relevant stakeholders could use this three-way interaction, including the supplementary activities, as it could foster students' engagement and make learning more productive.

Keywords: language and literature classrooms, student-lecturer-content interactions, synchronous and asynchronous platforms, technology

Introduction

The era of COVID-19 pandemic and industrial revolution 4.0 has made tens of thousands of educational institutions closed most of their classes. As a result, 1.5 billion students and 63 million teachers/lecturers have transformed face-to-face learning into online mode of learning (Unesco, 2020; World Bank, 2020). Following this, in early 2020, the Ministry of Education and Culture Republic of Indonesia required all levels of education from elementary school to university shifted in-person to online learning mode as the main teaching and learning processes in all subjects/courses (Kemdikbud RI 2020; Kompas, 2020), including in English literature and language department in universities.

English is important in Indonesia because the 21st century global workforce demands not only young and skilled university graduates competent in technical skills, but also communication skills which prioritize English language, predominantly in tourism, hospitality, services, advertising, marketing, manufacturing, and even shipping sectors (Di Grapello, 2013; Rido 2020a). However, learning English language and literature, is

considered challenging for Indonesian university students, especially during this covid 19-industrial revolution 4.0 era as there is transition of learning. Before, students meet their lecturers and friends face-to-face in their classrooms (Rido, et.al., 2018; Vu & Fadde, 2013); later, they have to study from home and this causes some issues (Kusumawati, 2020). First, interaction becomes one-way; students do not get sufficient feedback on what they are doing, there is no opportunity to express opinions, and lack of participation, so that communication skills are not developed. Second, lecturers have difficulty to incorporate a balanced and effective interaction in both synchronous and asynchronous platforms of teaching, determining the most appropriate technique, the focus of linguistic skills that must be prioritized, learning resources that can be easily accessed, as well as interesting and relevant learning media which make students not engaged in learning and less productive (Rido, Ibrahim, Nambiar, 2020; Rido, Kuswoyo, Nuansa, 2020; Valverde-Berrocso, et.al., 2020). Thus, this paper observes the transition of learning in the faculty of arts and education Universitas Teknokrat Indonesia during disruption-covid era, focusing on how the faculty maximizes a three-way interaction using technology, particularly in language and literature classrooms. It further looks at how the faculty promotes interactions between student and lecturer, student and student, as well as student and learning material using synchronous and asynchronous platforms.

Theory and Method

Aparicio, Bacao, and Oliveira (2016) and Rodrigues et., al. (2019) define online learning (also called: virtual learning, distance learning, m-learning, massive open online course or MOOC, learning management system or LMS) as a learning process facilitated by an innovative web-based system on digital technology that contains various forms of education as well as a number of interaction activities. The goal is to provide an open, accessible, fun and interactive learning environment that supports and enhances the learning process.

Dron and Anderson (2016) stated that online learning has its own characteristics, including student-centred; built in a structured and organized manner; involving massive participants and participation; integrated, timely and authentic. Because of these characteristics, online learning is carried out in two platforms, synchronous and asynchronous (Salmon, 2013). Synchronous online learning is a type of real-time learning; interaction between lecturer and student as well as between student and student are carried out simultaneously like regular face-to-face meetings, but are facilitated by a system, usually video-conferencing (O'Rourke & Strickler, 2017; Ziegler, 2016). Meanwhile, asynchronous online learning is not time bound and students can carry out electronic activities in their own way independently according to their own time availability. Normally, students only interact with learning material such as reading materials or learning videos that are related to the topic of discussion while lecturers only supervise or check (Wilkins, 2018). Please refer Figure 1 below.

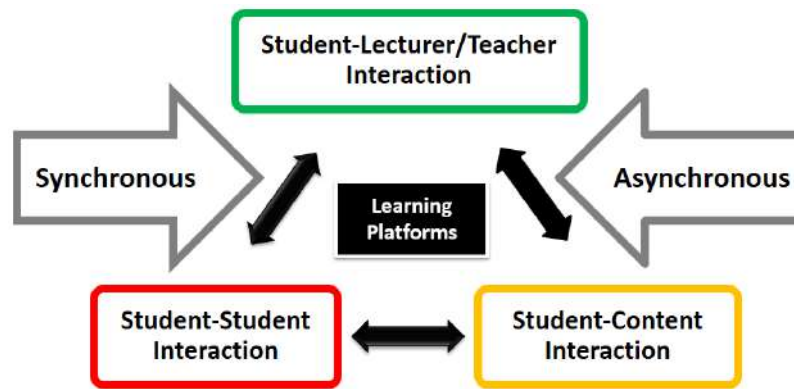

Figure 1. A three-way interaction in online learning mode (Adapted from Moore, 1989; O'Rourke & Strickler, 2017; Wilkins, 2018; Ziegler, 2016; Rido, Ibrahim, Nambiar, 2020)

Figure 1 shows the model of a three-way interaction in online learning mode. The key point is that both synchronous and asynchronous platforms need to accommodate interactions between lecturer and student, between student and student, and between students and learning material (Moore, 1989). This is where interaction and learning are intertwined (Rido, Ibrahim, Nambiar, 2020). In language and literature classrooms, interaction cannot be separated from learning because they are the core of second language teaching pedagogy (Rido, 2018; Rido, Kuswoyo, Ayu, 2020; Rido, Kuswoyo, Nuansa, 2020).

To conduct this study, a qualitative design was used and observation was conducted for two semesters at Faculty of Arts and Education Universitas Teknokrat Indonesia, focusing on English language and literature courses such as writing, reading, speaking, and listening as well as poetry analysis and production, drama analysis and production, prose analysis and production, and literary criticism which were conducted online. These online courses were attended by students of English Department from year one until four and taught by professionally trained and certified lecturers with masters and PhD in English language, linguistics, literature, and education who are comfortable using technology or digital devices.

Findings and Discussion

This study revealed that all lecturers at Faculty of Arts and Education Universitas Teknokrat Indonesia have maximized a three-way interaction using technology in their language and literature online classrooms by facilitating students to interact with their lecturers, other students, and learning materials. They also tried to balance the use of synchronous and asynchronous platforms to make students interested in learning.

Student-Lecturer Interaction

Based on the findings, it is indicated that all lecturers maximized student-lecturer interaction in their lectures and used both synchronous and asynchronous learning platforms. It can be seen in the following Figure 2.

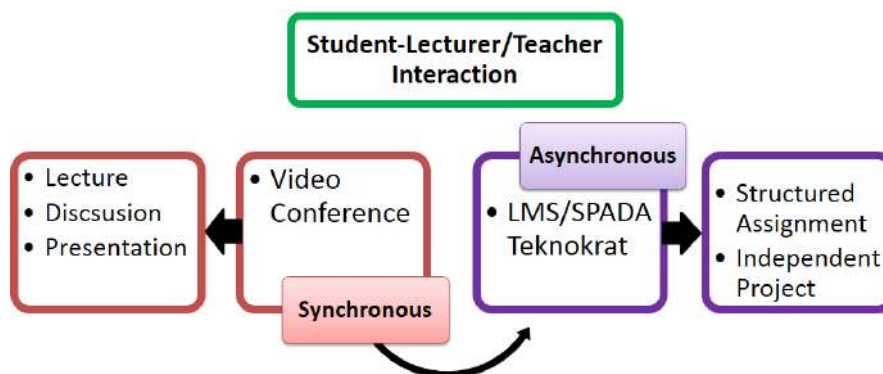

Figure 2. Student-Lecturer Interaction

Figure 2 shows how the lecturers utilized two platforms of learning in their language and linguistics classrooms to facilitate student-lecturer interaction. First, through synchronous platform, they conducted the class mediated by the university and personal ZOOM/Google Meet online video conference and the activities included lectures, discussions, and presentations. Through video conference the lecturers transferred language and literature knowledge based on the decided topics and managed the turn taking, deciding who speaks, when to speak, and when to stop (Rido, Kuswoyo, Ayu, 2020). They also facilitated discussions and presentations which gave opportunities for everyone to express their thoughts, exchange ideas, ask questions, and use their English language in various activities and for different purposes. After that, the lecturers gave their feedbacks, repairing students' language errors (normally grammar and pronunciation errors and mistakes) as well as commenting their literary content knowledge which improved their English language and critical thinking skills (Rido, et.al., 2021; Shi, 2013).

Second, through asynchronous platform, lecturers used the university official learning management system (LMS) or SPADA Teknokrat. Here, they posed structured assignment and independent project which were introduced in the beginning of the semester and the students had to do it step by step and consult their lecturers when they faced some issues. As most of the lecturers demanded progress report in the middle of the semester, the students frequently involved in intensive sessions of interactions with their respective lecturers before completing their assignment and project. This successfully promoted engagement and made students become productive learners as many of them published their works in national journals, newspapers, and anthologies.

Student-Student Interaction

Besides student-lecturer interaction, the lecturers also facilitated student-student interaction in their lectures synchronously and asynchronously. Figure 3 below shows how they manage the interaction and facilitate learning.

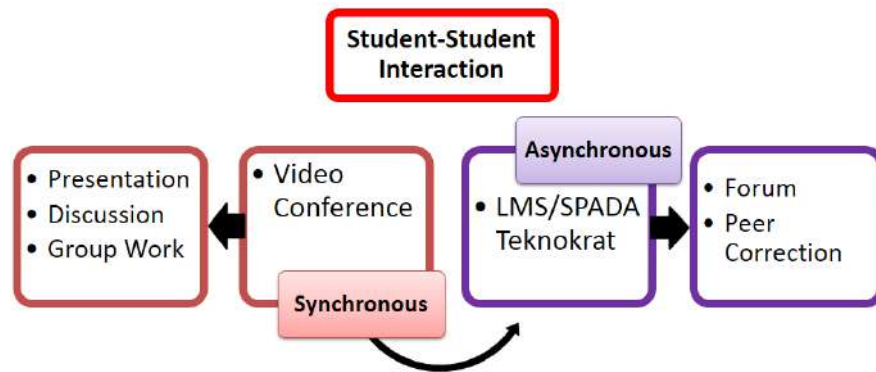

Figure 3. Student-Student Interaction

Figure 3 shows how the lecturers managed student-student interaction in their language and linguistics classrooms. Similar to lecturer-student interaction, in this student-student interaction they were mediated by video conference and LMS or SPADA Teknokrat. First, through video conference, the students got opportunities to synchronously interact with their classmates in a series of presentation and discussion sessions as well as group work. Here, they were given opportunities to share their ideas, give comments, and ask questions which could improved their English speaking skills and literary content knowledge (Kusumawati, 2020; Rido, Kuswoyo, Nuansa, 2020). Meanwhile, second, LMS or SPADA became asynchronous learning platform for forum discussion and peer correction among the students who were taking the course. This way of interaction was done in weekly basis for each course, therefore, made them excercise their writing and critical thinking skills, how they looked at their friends' works through different perspectives. This also encouraged participation and promoted active learning.

Student-Content Interaction

This study also indicated that the lecturers tried to maximize student-content interaction by posting all materials asynchronously through three channels namely Teknokrat Youtube Channel, LMS or SPADA Teknokrat, and Teknokrat OPAC and e-journals. Figure 4 below shows how students interact with learning content through the channels.

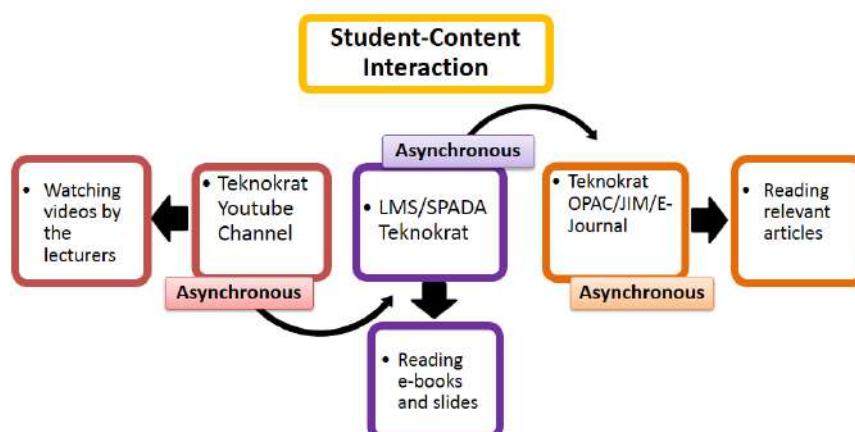

Figure 4. Student-Content Interaction

Figure 4 shows that the lecturers only used asynchronous learning platform in their language and linguistics classrooms to facilitate student-content interaction. First, they utilized Teknokrat Youtube Channel or *Kuliah Teknokrat* so that the students could access and watch videos related to the topics and materials being discussed. The videos were

presented by the lecturers himself/herself with the help of online learning production studio crews of the university. Second, the lecturers facilitated the students to interact with reading materials like e-books and slides through LMS or SPADA Teknokrat. The reading materials were uploaded based on the lesson plan and could be updated weekly based on the needs of the students. Third, the lecturers also encouraged the students to access the university library OPAC and e-journals which contained thousands of e-books, thesis, journal articles, and proceedings. The lecturers normally recommended selected reading materials based on the topic of discussion in a particular meeting. This helped the students to comprehend the materials at hand as they had some alternatives of learning which acted as input to improve their reading and listening skills as well as literary knowledge (Long, 1983a). In addition, this platform was practical as the students could frequently repeat, download, and save the videos, e-books, slides, and articles in their personal computer for further intensive learning (Rido, 2018).

Moreover, the lecturers also offers remote alumni and industry talks, webinars, social services, and researches and publications programs to support faculty in making this transition. Alumni and industry talks made the students had opportunities to learn from great people outside of campus, making them more aware of the skillsets needed for their future career. Meanwhile, through researches and social services the students were able to contribute to the society, by helping teachers, schools, and senior high school students who were struggling with online learning in this disruption-covid era. Their publications could be additional learning materials for them. This supplementary activities were also relevant with the spirit of *freedom of learning* or *Merdeka Belajar Kampus Merdeka* program by the Ministry of Education, Research, and Technology of Republic of Indonesia.

Conclusion

To conclude, the faculty has promoted a three-way interaction synchronously and asynchronously in their language and literature online classrooms. By maximizing a three-way interaction using technology, students have more learning platforms where they can interact with their lecturers, other students, and learning material, and society out of campus. As a result, the students become more productive as most of them successfully complete their courses and many of them publish their projects (articles, book reviews, poems, and short stories) in journals, newspapers, and anthologies. This study suggests that language and literature faculty and relevant stakeholders could use this three-way interaction, including the supplementary activities, as it could foster students' engagement and make learning more productive.
